2

SOUTHEAST ALASKA FEDERAL SUBSISTENCE REGIONAL ADVISORY COUNCIL MEETING

PUBLIC MEETING

VOLUME II

Central Council Tlingit & Haida Elizabeth Peratrovich Hall

> Juneau, Alaska November 1, 2017 8:35 a.m.

COUNCIL MEMBERS PRESENT:

Michael Bangs, Chair Michael Douville Donald Hernandez Albert Howard Cathy Needham Patricia Phillips Steve Reifenstuhl Robert Schroeder Raymond Sensmeier John Yeager

Regional Council Coordinator, DeAnna Perry

Recorded and transcribed by:

Computer Matrix Court Reporters, LLC 135 Christensen Drive, Suite 2 Anchorage, AK 99501 907-227-5312/sahile@gci.net

Phone: 907-243-0668 Fax: 907-243-1473

Page 160 Page 162 PROCEEDINGS harvested. Customary trade is not allowed under State regulation. Adoption of the proposal would allow for customary trade to occur from wolves harvested during the extended Federal hunting and trapping seasons. Despite increased opportunity for customary trade, the proposal would not influence better that the proposal would not influence better that the proposal would not influence better things. (Juneau, Alaska - 11/1/2017) CHAIRMAN BANGS: Please take your seats and we'll try to get started here. Good morning, everyone. Thanks for showing up this morning. Luckily it's not too early. It's a beautiful day out there. It's kind of tough to stay inside on a day like today. It looks like a nice fall day. harvest limits The proposal, therefore, is unlikely to substantially increase the harvest of wolves over present levels due to pelt quality being reduced during these periods. However, if increased trade opportunity increases the value and interest of wolf harvest during 11 12 13 14 12 13 14 Okay. Well, we're going to start off back on our proposals. We're at WP18-03, modifying hunting and trapping seasons for wolf in Unit 1. the proposed season extensions, then slight increases in harvest could result from this proposal. 15 16 17 15 16 17 Harvest during May when wolves are 18 19 20 denning could result in mortality of breeders or helpers that are influential to the pack persistence during denning, affecting recruitment rates and population growth, especially when pack sizes are less than six wolves. A slight harvest increase during the denning period could result in impacts to small packs when bayusest does occur from these packs. MR. SUMINSKI: Good morning, Chairman. Council Members. My name is Terry Suminski with the Forest Service. Proposal WP18-03 requests modifying the Federal hunting and trapping seasons in Unit 1 for wolves to match those currently under State regulations. This was submitted by Southeast Alaska Subsistence Regional Advisory Council and Jeff Reeves will present the analysis. 20 21 22 21 23 24 25 26 27 28 29 30 31 23 24 25 when harvest does occur from these packs. Staff recommendation is to support the proposal. By adopting this proposal the Federal and State seasons will be brought into alignment in Unit 1. Federal subsistence users can 26 27 Federal subsistence users can already harvest wolves during the longer State seasons. Adoption of the proposal would allow subsistence users to engage in customary trade if they desire from any wolves harvested from Federal lands within the expanded seasons. With pelt quality being of a less than prime during the proposed season extensions, it is highly doubtful that harvests would increase specifically for inst engagine in customary trade. MR. REEVES: Mr. Chair. 32 33 34 35 36 37 CHAIRMAN BANGS: Mr. Reeves 33 34 35 36 37 MR. REEVES: Can you hear me okay? CHAIRMAN BANGS: Yeah. You're coming just engaging in customary trade. in good. 38 39 40 41 42 38 39 40 41 42 Wolf harvest in Unit 1 is currently believed to be occurring at a sustainable level based on anecdotal accounts and harvest rates. Harvests in both November and May are currently very low in comparison to other months. Alignment of Federal regulations with the State regulations should not dramatically increase harvests beyond current levels as the majority of the May harvest is already being taken by non-Federally qualified users. wirk. REEVES: Okay. Wonderful. So WP18-03 you can find the executive summary on Page 124 and you can find the analysis on Page 127 in your books. 43 44 45 46 47 48 Proposal WP18-03 was submitted by this 45 46 47 48 Council and it's requesting modifying the Federal hunting and trapping seasons in Unit 1 for wolves to match those currently under State regulations. The proposal would bring Federal subsistence hunting and 49 50 This concludes my presentation. Page 161 Page 163 trapping seasons for wolves in Unit 1 into alignment with current State seasons that are currently longer. Thank you. CHAIRMAN BANGS: Thank you, Jeff. Are there any questions to Mr. Reeves. The proposal provides for consistent regulations with the State by creating a new Federal reg that's specific to Unit 1A and a small portion of Unit 1B, extending the hunting season closing date in Units 1A and the portion south of the Bradfield Canal and the east fork of the Bradfield River to May 31. It would change the Federal trapping season starting date fewers became to 100 to 100. (No comments) CHAIRMAN BANGS: Seeing none. Thank you, Jeff. Is there any reports from consultations with the tribes or ANCSA corporations? from November 10th to November 1st. 12 12 Orville. Thank you, Terry. Wolves can be harvested either with a firearm under hunting regulations or by trap, snare or firearm under trapping regulations. Wolf harvest in the unit is affected by local weather conditions and wolf abundance. Persistent freezing results in icing of traps and snares which can often make sets inoperative, and deep snow can bury snares and trail sets rendering them useless. Deep and persistent snow can also block vehicle access to the limited roads in Linit 1. Harvests by subunit can be found in Table 1. 13 14 15 16 17 MR. LIND: Good morning, Mr. Chairman. Board Members. Again, on September 14th consultation happened for the Southeast Region. Again, we had Mr. Harvey Kitka present at the conference and he did mention that there seems to be a lack of information on the oppulation of wolves in the area and noticed that their deer populations are lower and also that there seems to be predation happening. 14 15 16 17 18 18 19 20 21 22 23 19 20 21 22 23 Unit 1. Harvests by subunit can be found in Table 1, and method of harvest is in Table 2. That's all I have, sir. 24 25 26 27 24 25 26 27 28 CHAIRMAN BANGS: Thank you, Orville. Is there any comments from Alaska Department of Fish Most wolves have been harvested by hunters and trappers working from boats with the hunters and trappers working from boats with the majority of the trapping harvest typically occurring on State managed tidelands. Harvests by month can be found in Table 3 and method of transportation used to harvest wolves is in Table 4. Harvests in May have been very low, which is most likely related to pelt quality being degraded this late into the season. Of the eight wolves harvested by firearm in Unit 1 since 2010, only one has been harvested by a Federally qualified subsistence user. and Game. 28 29 29 30 31 32 MR. LOWELL: Mr. Chairman. This is Rich Lowell in Petersburg. Can you hear me okay? 30 31 32 33 34 CHAIRMAN BANGS: Good morning, Rich. 33 34 Yeah, you're sounding loud and clear 35 36 37 38 39 40 35 36 37 38 39 MR. LOWELL: Okay, good. Thank you, Mr. Chair. Im acquainted with many members of the Council, but for those who do not know me and for the record my name is Richard Lowell. Im the area wildlife biologist in the central panhandle for the Alaska Department of Fish and Game, Division of Wildlife Conservation. I oversee game management in Units 1B and 3 and I have held this position for 17 If adopted, this proposal would provide increased harvest opportunity under Federal regulations on Federal public lands in Unit 1. The proposal is unlikely to substantially increase the harvest of wolves taken in Unit 1 because Federally qualified subsistence users can already harvest on the same lands during. 40 41 42 43 44 42 43 44 45 46 the same time period and with the same total State and Federal combined trapping and hunting limits that are currently allowed under State regulations. 45 I'd like to provide a brief overall harvest history for wolves in Unit 1. I'll talk a little bit about the hunting season extension and the 46 47 48 49 50 47 48 49 50 Federal regulations allow for the customary trade of products crafted from animals trapping season extension.

Page 164 Page 166 For the 11-year period 2006 to 2016, you, Rich, for calling in. Are you going to stay the average annual harvest throughout Unit 1 was 58 wolves ranging from 41 to 79 annually. In general, 27 percent of wolves are harvested – are shot and 72 percent are trapped. There are no conservation concerns for wolves in Alaska Game Management Unit 1. MR. LOWELL: I will stay online, Mr. CHAIRMAN BANGS: Thank you. We'll move The wolf hunting season was extended to the end of May in portions of Unit 1 and those include 1B south of the Bradfield Canal and the East Fork of the Bradfield River and all of Unit 1A starting with the RY2011 season. The reason for the wolf hunting season extension in the southern part of Unit 1 was to help alleviate wolf predation in areas with chronically depressed deer populations, specifically on Gravina Island and the Cleveland Peninsula. along then and may come back with questions later on during deliberation. Are there any reports from Federal agency. 11 12 13 14 11 12 13 14 (No comments) CHAIRMAN BANGS: Any tribal comments, Ms. Perry? 15 16 17 15 16 MS. PERRY: No Native tribal, village Since the RY '11 one-month extension of the wolf hunting season in the southern portion of Unit 1, an average of slightly over one wolf per year has been taken by hunters during the month of May. In the six years since the season was extended, just one wolf was taken in southern IB during the month of May and that was by a Federally qualified hunter. During the same period of time, a total of six wolves were taken by hunters during the month of May in Unit 1A. All six were taken by Ketchikan residents. 18 19 20 comments received. CHAIRMAN BANGS: Any other Regional Councils, Fish and Game Advisory or Subsistence Resource Commissions. 20 21 21 22 23 24 25 23 24 25 MS. PERRY: Not on this proposal, Chair. 26 27 28 29 30 31 26 27 28 29 30 31 CHAIRMAN BANGS: A summary of the written public comments. In RY 2009, the wolf trapping season MS. PERRY: The Council did receive some comments on Wildlife Proposal 18-03. You'll see that they begin on Page 136 of the meeting book. A summary of the written public comments are as follows: Four written comments were received. One was the general public comment from Curis Donald Thomas of Ketchikan addressing all Southeast proposals. Key viewpoints were that attempts were being made to fix a problem that does not exist and he expressed concerns regarding new classes of citizens with special hunting rights being created. Also residency criteria and the ability of some Alaskans to harvest 20 halibut a day. In RY 2009, the wolf trapping season throughout Unit I was extended from a previous start date of November 10th to a start date of November 1 and that was throughout the region with the exception of Unit 4. If memory serves me correctly, I believe this was done in an attempt by the Board of Game to unify the trapping start dates for several species and coyotes and wolves in particular. However, I should point out that my memory is now as equally suspect as Member Schroeder's math. 32 32 33 34 35 36 37 33 34 35 36 37 38 39 40 41 42 38 39 40 41 (Laughter) In the eight years, RY '01 to RY '08, prior to a November 1 extension of the wolf trapping season, a total of 14 wolves were trapped during the month of November or on average 1.75 wolves per year. In the eight years since the Unit 1 wolf trapping season extension, just five wolves were trapped during the month of November. Three additional written public comments in opposition were received from Fairbanks residents Frances Mauer, Sharon Alden and Jim Kowalsky for Alaskans for Wildlife. Viewpoints included the 43 44 43 44 45 46 47 45 46 47 48 extension of season is overkill and would likely lead to excessive harvest of wolves and the enforcement of the month of November. 48 49 50 past quotas have been poorly managed. Page 165 Page 167 Therefore, despite the earlier November 1 opener for wolf trapping, the trapper harvest during the month of November has actually decreased. I should point out that most trappers do not set traps or snares for wolves until after the conclusion of the waterfowl season in Southeast, which is December 31st. They typically don't start in order to avoid catching duck dogs and to avoid catching black bears during the early part of the November season. Those were the only comments received for Wildlife Proposal 18-03. CHAIRMAN BANGS: Thank you, Ms. Perry. Is there any public testimony on this proposal. (No comments) CHAIRMAN BANGS: Is there anyone online that wants to address this The Department's recommendation is to support the proposal to align Federal and State hunting and trapping regulations for wolves in Unit 1 as the change in Federal regulations is unlikely to negatively affect the wolf harvest or hunting and trapping opportunity in the unit. Federally qualified hunters and trappers are already authorized to take wolves in Unit 1 during the proposed season dates under State regulation. 12 12 (No comments) 13 14 15 16 17 18 CHAIRMAN BANGS: Hearing none. What's the wish of the Council. 14 15 16 17 18 Mr. Douville MR. DOUVILLE: Mr. Chair. I move to adopt WP18-03. 19 20 21 22 23 With that, back to you, Mr. Chairman, and I will be happy to address any questions you or members of the Council may have. MR. YEAGER: Second. 23 CHAIRMAN BANGS: It's been moved by Member Douville and seconded by Member Yeager. Discussion. 24 25 26 27 28 29 24 25 26 27 CHAIRMAN BANGS: Thank you, Rich. Does anyone have any questions for Mr. Lowell. Mr. Douville. 28 Mr. Douville. MR. DOUVILLE: They refrain from trapping in the early part of the season because of bear, but on the other hand it's been my experience that in May you have the same thing, you have bears coming out in the spring, which puts them at some risk, but it appears that there isn't much effort in May, is that correct? 29 MR. DOUVILLE: Mr. Chairman. I will support this proposal. There's no conservation concern and it appears that the recordkeeping supports the proposal also of the record of take. It will benefit subsistence users some and it will not restrict other 30 31 32 30 31 32 33 34 33 34 users near as I can tell. 35 36 37 38 39 40 35 36 37 38 39 40 CHAIRMAN BANGS: Thank you, Mr. MR. LOWELL: Member Douville, that is correct. We see trappers voluntarily curtailing efforts on both the front end and typically on the late end as you suggest to prevent incidental take of other process. Douville. Any other comments. (No comments) 41 42 43 44 45 46 41 42 43 44 45 CHAIRMAN BANGS: I'll entertain a call for the question. CHAIRMAN BANGS: Thank you, Rich. Any other questions MR. REIFENSTUHL: Question. 46 CHAIRMAN BANGS: The question has been called. I'll do just a yea or nay. All those in favor of this proposal say aye. 47 48 49 50 47 48 49 50 (No comments) CHAIRMAN BANGS: Seeing none. Thank

mimously. next the Mr. I-St. I-St. theast larence ment of ith the this is tat. om Fish Chair. Sitka . Chair.		2 due fedu fedu fedu fedu fedu fedu fedu	In January 2015, the Board of Game ced the harvest guideline level down to 20 percent to an apparent population decline, as well as ka Department of Fish and Game identifying that ported take was a substantial factor in a study within the road accessible portions of the unit. my percent was proposed to ensure conservative set management of wolves while still allowing for ningful harvest ortunity. In addition to the reduced harvest eline level, during regulatory years 2015 and 2016 and Federal managers reduced the maximum wable harvest by an additional 50 percent as tional conservation measures to account for ported human-caused mortality. Unreported ality also includes wounding loss, escapes from s, whice collisions, and ilegal harvest. This of mortality has been identified as a nitially substantial cause of mortality of wolves in mit. Wolf populations on Prince of Wales do were thought to have remained high until the y1970s when extreme winters decimated deer lations. Wolf and deer numbers were ght to have remained at low levels in Unit 2 until early 1980s when the deer population rebounded. Wolf populations are difficult to ss in Southeast Alaska due to the dense forest er and because of their mobility. However, telemetry studies have allowed for estimates to adde for a small road accessible portion of their early the standard of their mobility. However, telemetry studies have allowed for estimates to adde for a small road accessible portion of their early the studies have allowed for estimates to adde for a small road accessible portion of their early the studies have allowed for estimates to adde for a small road accessible portion of their early the section of their early the proposed contents made for rences in prey populations and habitat. As a result of initial research during 990s, Person estimated that the 1994 fall wolf dation density representative in his study area was wolves. This estimate, along with other findings ed to natural mortality, wound up leading the dof Game to establish the harves

During the early to mid-2000s, the ka Department of Fish and Game made an effort to in an updated wolf population estimates and runined that the wolf population was approximately animals which was similar to the estimate 1994. State and Federal staff use this population nate to establish annual harvest levels of 90 res per season through the year 2010. In 2010, both State and Federal agers, as well as some members of the public, eved the Unit 2 population had dropped from ious estimates. In response, the Alaska Department sh and Game worked with this Council to lower the all harvest quota from 90 to 60 wolves. This est quota remained in effect through the 2013 on. From 2012 to present, research was ated to develop more efficient and cost effective injues to estimate wolf numbers in the unit. The research included implementing hair boards to ext hair samples for DNA fingerprinting, which will be researchers to identify individual wolves via typing and determine wolf population estimations in roject area. While data collected during 2012 proved fficient to allow development of a population mate from the hair-board technique because there not enough recaptures, a 2012 estimate was sible and reported using the traditional radio or methods resulting in an estimate in 2012 of 106 ess. Data collected in 2013 were sufficient to find the proposal of the find of the find of the find study area within the central portion of	Page	171

Page 172 Page 174 2014, including an increased take of wolves from the continue at least into the near future so we can study area prior to the 2014 population estimate continue to monitor the wolf populations' decreases in deer abundance, availability of decreases in deer abundance, availability of non-ungulate prey, increases in disease in wolves, increases in unreported wolf take and the possibility of a decrease in the vulnerability of deer to wolf predation during mild winters causing subsequent decreases in recruitment and survival of wolves. MR. REEVES: Mr. Chairman. Mr. Hernandez. It would be wonderful if it can. A lot of the population work is driven by the State, so perhaps a State representative could probably answer what they believe the future in the wolf population work in the In the year 2015 the population estimate again determined by hair-boards was 108 wolves. In 2016, the study area was expanded resulting in an estimate of 231 wolves. 11 12 13 14 11 12 13 14 CHAIRMAN BANGS: Any other questions. Ms. Phillips then Ms. Needham. 15 16 17 MS. PHILLIPS: Thank you, Chairman Wolves can be harvested either with a 15 Wolves can be harvested either with a firearm under hunting regulations. Table I shows that 93 percent of the harvest is typically taken by Federally qualified users. Wolf harvest is affected by local weather conditions and wolf abundance. Deep and persistent snow can reduce access to many of the logging roads on the island. Typically, the reported wolf harvest in Unit 2 has been highest from December through February. Bangs. Jeff, the Interagency Wolf Habitat Management Program recommendations for Game Management Unit 2, Page 63, under recommendations says: Maintain 18 19 20 18 19 20 flexibility in quota management to alter quotas on a yearly basis to ensure wolf population and harvest sustainability. 21 22 21 23 24 25 23 24 25 26 27 28 29 30 31 Has this been considered under the through February Staff analysis that maybe perhaps a 20-30 percent range would fall in line with this recommendation? Since 1985, most wolves, 59 percent, have been harvested by hunters and trappers working from boats with harvest typically occurring on State managed tidelands below the mean high tide line. Harvests by month can be found in Table 2 and method of transportation used to harvest can be found in Table 3. 26 27 MR. REEVES: Mr. Chairman. Ms. Phillips. You know, as it was stated yesterday, basically the Interagency Wolf Habitat Management basically the Interagency Wolf Habitat Management recommendations are supposed to be more of a guide for the decision-makers. In the early stages of my analysis, this document was still being finalized, so I did not bring that into my analysis. Ideally, I believe if Forest Service leadership wanted this to happen, this is a guide that could say, okay, yearly population work to determine these quotas does need to occur. 32 33 34 35 36 37 Person and Russell identified illegal harvest of collared wolves during their study period of 1993-1995 and again in 1999-2004. As a result, a mortality rate of 47 percent due to human causes was categorized as illegal harvest. Roffler in more recent research has suggested that 38 percent of the study wolves have died from human causes that were unreported. However, testimony from Federally qualified users to this Council seems to not suggest. 33 34 35 36 37 38 39 40 41 42 38 39 40 41 CHAIRMAN BANGS: Ms. Needham and then Mr. Schroeder. qualified users to this Council seems to not suggest high levels of illegal harvest. 42 MS. NEEDHAM: Thank you, Mr. Chair. Jeff, the analysis indicates that 30 percent take on a healthy population of wolves would be appropriate. How do managers assess what the healthy population is that 43 44 43 44 If adopted, this proposal would increase the harvest quota on Federal public lands in Unit 2 which would increase harvest opportunity for Federally qualified subsistence users. The proposal does not increase the number of wolves available to be 45 46 47 48 45 46 47 48 30 percent can be taken out of to remain a sustainable population? taken from non-Federal lands under State regulations. 49 50 MR. REEVES: Mr. Chairman. Ms. Page 173 Page 175 The proposal would create divergence between State and Federal regulations, and would pose extreme difficulty for State and Federal managers, requiring a management of two separate quotas within the unit. Needham. Perhaps the State might be able to better explain that one, especially since it was the Board of Game that in 2000 raised the harvest quota to 30 percent. I was not on the island in the year 2000 when that happened. I know for now it's -- the micro-management of the quota has been very important. Based on the past population decline from a similar harvest quota, the proposed harvest quota could possibly likely lead to unsustainable harvest in the future. And from the Forest Service perspective and our involvement, the harvest quota percents that are determined by the Board of Game has — there's a Staff recommendation is to oppose Proposal WP18-04. Since the proposal only increases available harvest on Federal lands, management of separate harvest quotas between State lands and Federal lands will be difficult for both State and Federal 12 12 (indiscernible) in those and why they're determined the 13 14 15 16 17 18 14 15 16 17 18 Ideally in the future hopefully there could be a management plan crafted that could maybe suggest something that, okay, if a population is this level, that we could have a 30 percent harvest and if it's at this level, then maybe it needs to be 20. Until then we just have to go with what's in regulation. Unfortunately, over time, since 2000 it's been dropped down to 20 percent. managers as well as confusing for hunters and trappers trying to harvest from those quotas. Although recent action by the Board of Game reduced the quota to 20 percent, lower wolf population estimates prior to the past couple of seasons have resulted in further restrictions to the quota to allow for sustainable harvest opportunity of wolves in the unit while rebuilding the population. 19 20 21 22 19 20 21 22 23 23 24 25 26 27 24 25 26 27 28 I hope I answered your question. Increasing the harvest quota back to 30 CHAIRMAN BANGS: Follow up. percent could likely recreate those past conservation concerns for wolves. As such, adopting the proposal could violate established principles of wildlife management being contrary to the conservation mandates of Title VIII of ANILCA. 28 MS. NEEDHAM: Yeah, you talked around it a lot, but I think the short answer to the question is there might not be a particular level of population. 29 29 30 31 32 30 31 32 33 34 Terry, did you want to address that before I ask my next follow-up question? Thank you 33 MR. SUMINSKI: Ms. Needham, through the That concludes my presentation. 35 36 37 38 39 40 35 36 37 38 39 40 MIK. SUMINSKI: MS. Necunam, through the Chair. I think the Department is prepared to have a presentation that will get into more of the details of how the estimates are calculated and things like that. So some of these questions might be better answered by the State. CHAIRMAN BANGS: Thank you, Jeff. Are there any questions for Mr. Reeves from the Council. the State Mr. Hernandez 41 42 43 44 45 MR. HERNANDEZ: Thank you, Mr. Chairman. Yeah, Jeff, I was just kind of wondering, looking into at least the near future, there's been a lot of efforts put into trying to determine wolf populations. Of course it's an expensive proposition. A lot of research involved. Thank you. MS. NEEDHAM: Thank you. Jeff, to follow up on that. If the quota or the harvest levels would be raised to 30 percent, are there mechanisms in place for when wolf populations become less – or there's a concern with respect to the previous fall population that the quota could be less than that 30 45 46 46 47 48 49 50 47 48 49 50 Do you foresee that these efforts will

Page 176 Page 178 percent rather than having to always harvest at that 30 but it turned out that a handful more had been taken in percent? If so, if there is that mechanism, in the 15 to 17 years that it was at 30 percent, was that ever the reporting period than showed that So I hope that answers what you were looking for. MR. REEVES: Mr. Chair. Ms. Needham. Again, probably the State could probably better answer that. I don't recall though in my literature review of seeing anything that during the times when there was the higher quota into a season that the 30 percent was reduced down. I don't think that occurred until these past recent years. CHAIRMAN BANGS: Follow up. MR. HERNANDEZ: Yeah. Thank you, Jeff. I think it does. So what it's telling me right now is that currently the Federal season has a season length and a bag limit for hunting, but there is no harvest quota set under Federal regulations currently. 11 12 13 14 12 13 14 Hopefully the State can further clarify 15 16 17 that for you. MR. REEVES: Mr. Chairman, Mr. 15 16 17 18 19 20 Hernandez. The quota is set jointly and so, especially the last few years, it's been announced jointly by both the State and the Forest Service on a joint CHAIRMAN BANGS: Thank you, Jeff. announcement because the Forest Service recognizes that Mr. Schroeder. announcement because the Forest Service recognizes t that quota will apply to the Federal regulations as well as the State. So basically it's one set number of wolves for two different trapping seasons, a State and Federal trapping season, as well as two separate hunting seasons, a State and a Federal hunting season. 20 MR. SCHROEDER: Hi, Jeff. This is Bob Schroeder. It's good talking with you again. I'm wondering about the harvest population estimates. I guess in my mind I see that if we have perfect knowledge, we'd see that the number of wolves in a given environment would vary with or without any hunting or trapping pressure over the year. There's a life cycle thing of demning, birth, wolves being kicked out of packs and possibly not finding an environment that allows him to join another pack. 21 22 23 24 25 23 24 25 26 27 CHAIRMAN BANGS: Thank you, Jeff. Any 26 27 28 29 30 31 other questions for Mr. Reeves. 28 29 30 31 Ms. Phillips. MS. PHILLIPS: Thank you, Chairman Bangs. So to follow up on that line of questioning, how would this proposal, if it were implemented, affect that joint decision-making? So I'm just wondering — perhaps the State will get to that in their presentation, but I'm wondering if you had any comments on that. This has to do with the population of wolves at different times of the year and when the estimate is made. Thank you. 32 32 33 34 35 36 37 33 34 35 36 37 MR. REEVES: Mr. Chairman. Ms. Phillips. To tell you the truth I don't know how to answer that. Basically I can see how it might look easy. Okay, here's this population estimate, so 30 percent is this number, 20 percent is this number, but then it would be really hard – I guess if you had a population estimate of 100, which means 30 could come off of Federal lands, but only 20 could come off of State lands, so how do you sit there and manage for those 10 wolves extra that could come off of Federal lands when we know if 20 gets hit, then you've already MR. REEVES: Yeah, Mr. Chairman, Mr. Schroeder. Hopefully the — I think the State will provide you more information. I mean if it's talking 38 38 39 40 41 42 provide you more information. The all it is taiking about the variability like during the year of how the population moves around, I'm sure they could probably answer that through some of their telemetry work. They're the primary driver on the population work, so they could probably let you know too from the DNA standpoint of what they're finding in the hair-boards too. 43 44 45 46 47 48 45 46 47 48 lands when we know if 20 gets hit, then you've already closed the State. It's one I just can't explain it. 49 50 CHAIRMAN BANGS: Mr. Hernandez. I mean you probably hear me stuttering Page 177 Page 179 and trying to explain this. It just seems like it's going to be harder to effectively manage at the management level, but also it just seems like it's just too hard to try to have the user be able to understand, okay, well, if I have harvesting here have I exceeded the quota, you know. That gets down to the other point is that a majority of the wolves tend to be taken on State land or non-Federal lands. MR. HERNANDEZ: Thank you. I have a more basic question kind of regarding the regulation itself currently as written. On the Federal regulation it says that Federal hunting and trapping as says man 1 cucran innumg and trapping season may be closed when the combined Federal-State harvest quota is reached. In the State regulation it says that the annual harvest of wolves in Unit 2 should not exceed 20 percent of the population estimate. If there's a suggestion of how to make this work, we would be all for it. It appears to me that as of right now the Federal system does not actually have that 20 percent stipulation in its regulation. That we only do a – is it true that we just do kind of some kind of agreement with the State that we will align our regulation with theirs at the time the quota is set? 12 13 14 15 16 17 CHAIRMAN BANGS: Thank you, Jeff. Any other questions. 14 15 16 17 Could you maybe clarify that. MR. REEVES: Mr. Chairman. Mr. Hernandez. You're correct in your observations that the Federal reg just states that it would be closed when the combined quota is reached and that's kind of MR. SUMINSKI: Just a little follow up on Mr. Hernandez's question. The way the regulation is stated now is that basically the Board has directed us to work with the State to establish one quota. That's 18 18 19 20 21 22 23 how our in-season manager's delegation says that he's supposed to close when the quota is reached. what it says. 23 As far as Jeff's answer to Mrs. Phillips' question, it just shows how difficult it is and especially how important it is to work with the 24 25 26 27 28 24 25 26 27 So the State's regulation kind of governs how much harvest can occur, so that's why we don't have it specifically spelled out. The way that we've just always dealt with it is we've pixelarly. Pve always that with it is we've pixelarly. Pve always been in constant communication with the local State manager when we had one here on the island. Finding out what's happening and providing those updates to the in-season manager. and especially involved in its to work whit the State to manage this population together. They're the lead on the population estimate and a lot of the research and it's just imperative that we work together in some fashion. I think Jeff's answer of how these two different quotas of work kind of highlights how important it is to work with ADF&G. 28 29 29 30 31 32 33 34 30 31 32 33 34 Typically that has neared the point of getting close. We've always tried to take a joint action concurrent with the State of Alaska. The wolf sealing occurs through point of sealer, so the State is Thank you. 35 36 37 38 39 40 35 36 37 38 39 40 CHAIRMAN BANGS: Thank you, Terry seating occurs through point of seater, so the State is getting the updates weekly or however, so that's why I maintain the communication with them. So basically it's, okay, looking at harvest rates till now, here's probably — it's going to get hit at this point, so let's start the process now and be able to give trappers time to get their gear out. Cathy. MS. NEEDHAM: Thank you, Mr. Chair. This might be more of a policy-based question, Jeff, but if we were to recommend this proposal to move forward, would we be able to include in that 41 42 43 44 45 42 43 44 45 46 iorward, would we be able to include in that recommendation that implementation be delayed until the potential Board of Game like action could occur or would occur? I mean my understand is that if we decided to recommend that this proposal be adopted by the Federal Subsistence Board, that we would also follow that up with a proposal to the Board of Game. So in the past it's kind of been — you'll notice that sometimes it might have fallen short of the quota by a couple animals. Well, that's because it was anticipated that it was going to happen. Then we had cases like last year where we took the action, 46 47 48 49 50 47 48 49 50

		Page	180			Page	182
123456789012345678900123456789001234567890012344567890012344	So I guess my question is just a matter of procedure or policy of whether or not the Federal Subsistence Board could delay implementing that 30 percent raise until the Board of Game also did the same thing. MR. REEVES: Mr. Chairman. Ms. Needham. You know, I'm not going to speak on behalf of the Board. If there's someone from OSM there that might be able to answer that. I think there may have been things in the past where that kind of strategy has been taken, but I don't know so I'm not going to say something and then be wrong about it. Hopefully someone from OSM might be able to chime in on that. You're correct in that a Board of Game process would be a very good route to go on this. Hopefully the OSM can answer your question. CHAIRMAN BANGS: Go ahead. MS. HARDIN: Mr. Chair. This is Jennifer Hardin from the Office of Subsistence Management for the record. Regarding your question, I believe it was Ms. Phillips' question or Ms. Needham's question. Yes, the Board could take any number of actions on a proposal such as this. There have been cases when the Board has chosen to defer action on proposals. So that's not outside the realm of possibilities. As Jeff noted, it's impossible for us to know what action they would take. CHAIRMAN BANGS: Thank you. Ms. PhilLips: Thank you, Chairman Bangs. To follow up on Cathy's question. When could a proposal submitted to the Board of Game for their consideration?	Page	180	1 2 3 4 4 5 5 6 7 7 8 9 9 10 111 12 13 114 15 16 17 18 19 20 21 22 23 33 24 25 26 27 28 29 30 31 1 32 2 4 3 3 3 3 4 3 5 3 6 3 7 3 8 3 9 40 41 42 43 44	Thank you. CHAIRMAN BANGS: Thank you. So is there any questions for Jeff or Terry. Mr. Howard. MR. HOWARD: Thank you, Mr. Chairman. I'm wondering if any of these Federally recognized tribes have put a proposal before the Board of Game trying to address the wolf population in that area. The reason I'm asking is Angoon has put several proposals forward to the Board of Fish and they've never seen the light of day. This could be their way of addressing the fact that they're being ignored by the process, I guess, so to speak. So do you have an idea if they've put proposals trying to address this issue before the Board of Game? CHAIRMAN BANGS: Okay, Mr. Howard, we're addressing questions to the presentation. We'll get into deliberation and discussion after we get the rest of the presentations. Would that be is that okay? Do you understand what I'm saying? We need to address the questions to the Federal agency's analysis. MR. HOWARD: Okay. Thank you, Mr. Chair. CHAIRMAN BANGS: Any other questions for Mr. Reeves or Mr. Suminski. (No comments) CHAIRMAN BANGS: Hearing none. Thank you, Terry and thank you, Jeff. MR. SUMINSKI: Thank you, Mr. Chairman. CHAIRMAN BANGS: Is there any reports from consultations with the tribes or ANCSA corporations?	Page	182
5 6 7 8	question – well have to find out what cycle they would address that and I think the State would probably fill us in on that. Patty.			45 46 47 48 49	MR. LIND: Thank you, Mr. Chairman. Council Members. Orville Lind, Native Liaison for the Office of Subsistence Management. As I said earlier, the only information was from Mr. Kitka and in Unit 2		
1 2 3 4	MS. PHILLIPS: Thank you, Chairman Bangs. If it were to be amended to a range of 20 to 30 and then that allows for an emergency action, that would fall within a 20 to 30 range. So if we were to	Page	181	1 2 3 4	also about the wolf population uncertainty and also the predation issue. That's all I have, Mr. Chair.	Page	183
5 7 3	adopt this proposal, amend it to a 20 percent to 30 percent range, so the Staff or the biologist would decide when to close that. Would that be an emergency closure if you're falling in the range or how would that decision be made.			5 6 7 8 9	CHAIRMAN BANGS: Thank you. Any questions. (No comments)		
1 2 3 3 4 5 5 7 7 3 9 9 0 1 1 2 2 3	MR, SUMINSKI: Through the Chair. Ms. Phillips. The existing State regulation talks up to 20 percent, so anything less than 20 percent the quota could be set at. The Federal proposal is up to 30 percent, so that incorporates what you're saying. So anything 30 percent or less could be set as a quota. CHAIRMAN BANGS: Mr. Reifenstuhl. MR. REIFENSTUHL: This kind of seems more like deliberation in modifying the proposal, but if you're okay with that, I have a comment.			11 12 13 14 15 16 17 18 19 20 21 22 23	CHAIRMAN BANGS: Hearing none. I think we'll move on to the agency comments from the Alaska Department of Fish and Game. MR. SCOTT: Thank you, Mr. Chairman. Council Members. For the record, my name is Ryan Scott. I'm the Regional Wildlife Supervisor for the Southeast Region, Division of Wildlife Conservation. Joining me at the table is Tom Schumacher, the Management Coordinator for the region as well. I have hopefully not too long of a presentation. It's some of the stuff this Council —		
	CHAIRMAN BANGS: I think we're trying to find out how this is going to work with the State			24 25	presentation. It's some of the stuff this Council — we've brought to the Council before. It also incorporates some updated information throughout last season's harvest and population estimate and this is		
1 5 7 8 9 9	and Federal misalignment. I think that's the intent of the discussion, but thank you. MR. REIFENSTUHL: I understand that. So then I guess I would suggest if we go with the research the State has, the way to change the proposal would be align with the State regulation and then put in a Board of Game proposal to raise it to 30 percent			26 27 28 29 30 31 32 33	very similar to a presentation we provided in Craig on October 16th just last month with the community and interested parties. I also wrote down many, many questions that I figure are going to come my way, so I'll do my best to answer all those and hopefully this will be		
	and Federal misalignment. I think that's the intent of the discussion, but thank you. MR. REIFENSTUHL: I understand that. So then I guess I would suggest if we go with the research the State has, the way to change the proposal would be align with the State regulation and then put			26 27 28 29 30 31 32	very similar to a presentation we provided in Craig on October 16th just last month with the community and interested parties. Page 184 Page 186 February and December are the primary months for the I also put in there as a final bullet I also put in there as a final bullet on this slide just additional camera data. Through some wonderful efforts of folks on the island as well as the Nature Conservancy Staff there, we're getting additional information from cameras that are being put out, remote cameras. We have thousands and thousand and thousands of wolf images from Prince of Wales Island This is a long-term outlook of harvest in Unit 2 wolves beginning in 2013, '14, '15 and '16. Emergency orders and special actions through the OSM and the U.S. Forest Service were used to close the season early by emergency order when the quotas were 11 12 13 14 You can see here a table of the wolf density estimates for the study area, the first column on the left, and then the middle column is the 12 13 14 There are methodologies to use camera traps to come up with a density and a number estimate. We have not in this particular area and for this project we have not designed it to be used as such. So we've got tons of images. We're frankly not sure how to incorporate that all at this point. estimated number of animals within the study area, and then extrapolating that into Game Management Unit 2 as 15 16 15 a whole the number of wolves that were estimated. 18 19 20 The map to the far right demonstrates The map to the far right demonstrates the overall study area. This was greatly enlarged this past season through a cooperative effort with Hydaburg Cooperative Association. In addition, we worked with the Nature Conservancy and Citizen Science Programs in the local schools and with teachers and students. All of those entities, including ADF&G and the Forest Service were out in the field collecting hair samples, utilizing the hair-board methodology that we've talked about extensively. We can get some minimum numbers of We can get some mannum numbers of wolves in certain areas. We're able to put cameras out at den locations. We can get at least initial glimpses of what pup production is going to be, but we don't know about survival. You know, we may see four or five pups, but we're not sure how many ultimately will make it to adulthood. But it is another avenue to be investigated as we on 20 21 21 22 23 24 25 23 24 25 26 27 investigated as we go. 26 27 28 29 30 31 We have found that the hair-boards work very well and I think this season actually demonstrates that when we submitted three times the number of That estimate was derived from a That estimate was derived from a plethora of wolf samples that we received this year from all those groups. We sent in approximately 1,100 hair samples to the lab, about three times more than we had ever sent before. We did experience some delays. The lab was a little bit overwhelmed, frankly, with the number of samples we sent in, plus they had some machinery break down, so it took us a little bit of samples than we had previously. 32 33 34 35 36 37 So what's going on right now. The field season has begun and all parties again ADF&G staff, Forest Service, Hydaburg Cooperative Association and the Citizen Science Group, I believe, are off the ground now and going and the Nature Conservancy. So all the parties that were involved in last year's field work are at it again. We are focusing on the same study area as 2016 that expanded study area and utilizing many of the same notes. These are areas that 33 34 35 36 37 time to get everything out on the street. 38 38 39 40 41 42 We did not announce the quota for 2016 until after September 1st. We had been in constant contact with the Forest Service kind of anticipating utilizing many of the same nodes. These are areas that we place the hair-boards. seeing that coming on the horizon to ensure that that was appropriate for them. They felt like they could hold on until we could get the best data possible. 43 44 We do have concerns with going over the 20 percent. In regulation that is, as a Department of Fish and Game employee, that's as high as we can go. As Mr. Reeves mentioned during his presentation, we did go above the quota last year and that's something that we really don't want to do. We really want to be 45 46 47 45 46 47 48 As soon as that number hit my desk I was in contact with the district ranger in Craig with the chairman of this Council as well as Mr. Douville out of Unit 2 and other interested parties and we also 48 Page 185 Page 187 careful with how we approach that. So I put how do we, all of us collectively, ADF&G, the RAC, Forest Service, trappers, hunters, how can we keep from doing that. set up consultation on the island as soon as we had those numbers and we could organize schedules and things like that. A lot of what I just said. About 60 percent of Unit 2 is being sampled now. That's the main island, Prince of Wales. It's very true. We're not out on the outer islands in some of the other areas where access is difficult, but when we talk about sampling a specific unit, sampling 60 percent of an area is a lot. Generally speaking, in many resource programs you don't see that level. And then again the current harvest as of just a few days ago we had four wolves sealed. Boyd Porter, who is in the audience with us, maintains very regular contact with the appointed sealers as well as Fish and Game staff in the Craig office. So we know relatively soon when we have a wolf that's been presented for sealing. 12 There was one additional wolf that was called in, a vehicle strike, and somebody actually spent some time looking for it. The wolf was able to 13 14 15 16 17 18 Using math and statistics, we extrapolate that out over the broad area and there's 14 15 16 17 18 extraporate that our over the broad area and there's always going to be some concerns with that knowing that we're not always sampling every single wolf. We just can't. That's impossible. But we assume that the density of wolves will go up and down in somewhat a predictable fashion across the area. travel quite a ways and that has not been counted towards the quota. So I'm going to ask Mr. Schumacher to run through this part for you. This is our idea for helping us not go over that 20 percent. This was presented in Craig as well. It's a stab at what we are thinking about as far as how to manage for the harvest. In our samples we detected 145 wolves, 80 unique animals. This process requires that we need to re-catch wolves multiple times to get a pretty solid estimate. In that estimate 231 wolves – I'm going to flip back real quick. You can see that at the bottom we list a range of 192 to 285. So somewhere in there we know in that range we have a high level of certainty that the real number of wolves exists. Conventionally we use the midpoint of the estimate for the basis of the quota and that's been conventionally across many other types of programs. 23 23 24 25 26 27 28 24 25 26 27 MR. SCHUMACHER: For monitoring harvest, the reason that that's important for us to do is because the perception outside of this room and maybe outside of Alaska is that we're unable to manage 28 harvest based on what happened last year. Last year we based our harvest monitoring on sealing dates. Everyone here is aware there's a two-week sealing 29 29 30 31 32 30 31 32 33 34 other types of programs. 33 This year, unlike the last two or three years, we've allocated up to 20 percent of the population for harvest. What that translates into is 46 wolves. As we've discussed many, many times the Recoverable from a trap you have two weeks to seal it. That puts a two-week time lag into what we know about has been harvested. So when we find out that we're getting close to whatever the quota is, 34 35 36 37 38 39 40 35 36 37 38 39 40 40 volves. As we we discussed many, many times the last few years, we've held back a proportion, 50 percent of the harvest due to concerns about wolves we didn't know about. Not necessarily illegal harvest, but things that — wounding loss or other information like that. the traps are in the woods for another two weeks still or trapping may have gone on for another two weeks. So what we're most interested in is knowing when a wolf steps in a trap as we approach the quota. So this year it's 46, so we want to know when wolf number 46 steps in a trap so we can close the season and not exceed that amount. Relying on sealing data puts a two-week time lag makes it very difficult. We thought this year we would try to project when harvest of animals will occur based on last year's data or based on a number of previous years' data. 41 42 43 44 45 Based on what it looks like this wolf Based on what it looks like this wolf: population is doing, it is appropriate to harvest up to 20 percent. That 20 percent is a conservative approach and it was designed that way and it was put in place that way as we noticed the decline in animals across the unit as well as concerns with an Endangered Species 45 46 46 47 48 49 50 47 48 49 50

Page 188 Page 190 The idea this year is to look at past actually an advantage for managing. harvest data. Sealing records do not indicate the date the wolf was harvested. So what we would do is take the month the wolf was harvested – actually we have a sealing date, excuse me. So we'll have a date the wolf was sealed. We'll back that two weeks assuming that trapper held onto it for two weeks or the wolf was in a This is our idea for managing harvest. We'll use number of wolves sealed by close of business on December 14th as the total harvest through November 30th. We'll project the season closure date by adding 1.6 wolves to that total. On the date that based on that harvest trate the quota 46 duil be achieved, we'll issue an emergency order right then in the middle of December and say it's going to close on such and such a date. That will give everybody plenty of warning. trap for some period. Then on December 15th we'll look at how many wolves are sealed and give us the number of wolves that were trapped through the end of November. Then based on harvest rate calculated on previous years' data, we will project by when the quota would be reached by when the last wolf would step in a trap, 11 12 13 14 12 13 14 This is an example. On December 15th let's say we have eight wolves sealed, so that would be eight wolves taken through November 30th. On December 1st we've got 1.6 wolves per day to that eight wolves and that would lead to another 24 days to reach 46. So we would close the season on December 24th. We'd issue an EO on December 15th saying the season closes December 25th. 15 16 15 then we could issue an emergency order closing the season for that date. 18 19 20 There are some concerns with that, There are some concerns with that if by then your harvest is much lower than what the quota is. We can reopen the season, but numerous trappers pointed out to us in Craig that's very inconvenient and difficult for them to get back out in 20 December 24th. 21 22 21 That's essentially a summary of why we need to manage within the quota and an idea for how to do it. We realize that's not a popular idea with trappers and it would cause them some difficulties especially if we don't achieve the quota by the day we close the season. So at this point were looking for further input, but the season is coming up and we do made to do competition restrict unickly. 23 24 25 23 24 25 intended the field. So I guess we're still pondering our options and looking for other ideas about how we can monitor harvest so it stays under the quota so we appear that we can manage the population effectively but still harvest up near the quota. 26 27 26 27 28 29 30 31 28 29 30 31 need to do something pretty quickly. We'd be happy to entertain any ideas anyone has afterwa Back to Ryan. 32 MR. SCOTT: Thank you, Tom. These are just to wrap this up. So if this proposal is adopted, Federally qualified hunters and trappers would be able to harvest up to 30 percent of the most recent estimate. 32 33 34 35 36 37 MR. SCOTT: There's still lots of 33 34 35 36 37 (Laughter) MR. SCHUMACHER: Oh, I was not aware of this. These are some slides that came from the presentation in Craig. The reason it's important to be able to appear that we manage harvest within a system is because one of the reasons a wolf can be listed under the Endangered Species Act is inadequacy of existing regulatory mechanisms. When we exceed harvest quotas, it appears the regulatory mechanisms are inadequate. 38 39 40 41 42 38 39 40 41 I wanted to take a minute and just read from the State Fish and Game codified language. Our guidance or our requirements in this realm. It comes from 5 AAC 92.008 harvest guideline levels. (1) wolves: the annual harvest of wolves in Unit 2 should not exceed 30 percent of the unit wide, preseason population as estimated by the Department. So at present we can provide up to 20 percent. 42 43 44 43 44 45 46 47 45 46 47 48 inadequate I don't think it's in anyone's interest in this room to invite another endangered species The next two bullets just walk you through what currently both the State and Federal 48 49 50 Page 189 Page 191 petition. Everyone here should be aware that the previous petition, while it was found not warranted by the Fish and Wildlife Service, the groups that filed it have also requested the entire administrative record hunters and trappers are adhering to. The 20 percent of the estimate. A joint harvest quota has been in place since 1997. A list of our concerns with this proposal. You know, there is some potential for overharvest. from that process and are likely combing through that looking for things like problems with process, errors of fact and looking for new information that may influence the outcome of that decision. We're still handling the population somewhat gently. The good news is numbers are going up. I mean at least Recognizing that there are concerns with too many wolves and that's not what I'm inclined Last year's excess harvest over the established quota was also mentioned in a lawsuit of wolves in Montana. So it's important for everybody to realize that the Unit 2 population of wolves is in the national spotlight and we do need to be careful about how we manage it. We do need to give both the appearance and in fact be able to manage it within the repulatory system that's established. white to finally worker and that's not what if in the mean for the realm of wolf management and trying to ensure that we have sustainable wolf numbers as well as address user group's concerns, having a few more wolves at this point in time isn't a bad thing. 12 12 13 14 15 16 17 18 13 14 15 16 17 18 There are concerns with land management and who hunters and trappers — Prince of Wales is a big island. The majority of it and the majority of unit 2 is Federally managed lands, but there is a patchwork of both State and private lands as well. regulatory system that's established. So that's the real basis for why we need a good system of regulating the harvest and closing the season when we're approaching the quota. Our goal is to achieve but not exceed the quota. Monitoring harvest using sealing records didn't work, so what's a better idea. 19 20 21 22 19 20 21 22 And then enforcement, as you can see in some of the comments that have been made, I'm not sure how many enforcement officials are on the island at this point. In the past there were two wildlife troopers as well as a Forest Service LEO, but we have had some turnover in staff at least on the trooper 23 23 24 25 26 27 28 24 25 26 27 This is essentially what I explained This is essentially what I explained before. We'll assume that wolves are trapped at the same rate as they were in 2016 or we can incorporate a harvest rate for a number of years. Last year's was the only years I calculated that for. Beginning on December 1st wolves were harvested at a very steady rate, which is good for management. It was 1.6 wolves 28 29 29 30 31 32 30 31 32 33 34 So currently the State opposes Proposal WP19-04 because of concerns that potentially any per day. It was almost a straight line on the graph. 33 harvest will exceed at least the State regulated harvest limit 34 So we can incorporate other years of data and see if that pattern holds true in other years or use several years data to calculate a harvest rate. 35 36 37 38 39 40 35 36 37 38 39 I included this slide too. There's a lot going on here and most of the folks here have seen tot going on nere and most of the folks here have seen this before except for the bottom one. It's just a history of the harvest management on Prince of Wales beginning prior to 1997. Ms. Perry has this presentation and if you'd like hard copies I can also ensure that you get those. The important thing is we want to have some idea of when wolves are caught in traps not sealed because sealed puts us two weeks behind and leads to exceeding 40 41 42 43 44 41 42 43 44 This is a graph of harvest from last year. You'll see harvest is very low from when the Federal hunting season is open in September and the Federal trapping season opens the middle of November. Once you get to December 1st the harvest really takes off in earnest and it's a pretty straight line, so that means a pretty constant rate of harvest, which is $\label{eq:condition} I'll \ be \ happy \ to \ answer \ questions \ I \ started \ and \ answer \ them \ as \ we \ go.$ 45 46 45 46 47 48 49 50 47 48 49 50 Thank you for your time, Mr. Chairman and Council.

Member to the look of the look and a latter through the look of the look of the look and a latter through the look of the look of the look of the lo	Did you have a question, Mr. Hernandez? MR. HERNANDEZ: Yeah, Mr. Chairman. During the course of the presentation I kind of came up with at least one question. In the wildlife regulatory process, I don't know if it's similar to fisheries regulation where something we deal with on a regular basis is the season is set and during in-season management they do an extension of the season. Is an actual extension of the season a possibility in wildlife management as well or is it more complicated than that? If you want to set a closing date for a season once you feel you're getting close to the guideline harvest, but it's kind of understood that with new information coming in you can easily just extend that season for a period of time. You know, inseason action. Is it that simple or more complicated for wildlife? MR. SCOTT: Through the Chair. Member Hernandez. It's possible to do that through emergency order action. It's not something that I'm aware of having been done for this particular species, but for other species it has been done. I think it kind of gets back a little bit to the presentation we heard from Krisy Tibbles yesterday, the Executive Director of the Board of Game. There is a process that it would have to go through, but the potential is there. The same mechanism would apply should we go down the road of estimating when we would reach that guideline harvest level and closing the season. We would use an emergency order to actually open it back up potentially if there's a sufficient number of wolves available for harvest. CHAIRMAN BANGS: Thank you. MS. NEEDHAM: Thank you, Mr. Chair. How many times has the quota been exceeded much like it happened in 2016? Over the time that you've set the quota, how many times has it got to the point that it's			2 3 3 4 5 6 6 7 8 9 9 10 111 12 2 13 14 15 16 17 18 19 19 20 22 23 33 34 4 25 36 37 38 39 40 41 42 43 44 44 48 49 49	MR. HERNANDEZ: A similar question, the question I had. I mean what happened last year kind of calls into question, you know, your 50 percent reduction for unreported take. I guess If m just wondering for this year are you still committed to that 50 percent reduction? Also in your meetings down in Craig, what were the discussions along that line for this coming year? MR. SCOTT: Through the Chair. Member Hernandez. No. We have provided – we're looking at the 20 percent. We want to harvest at or near those 46 wolves. The discussion in Craig was very similar to discussions that we have all had as well and we all heard previously. We have two studies that have indicated that there's X level of unreported mortality that we need to account for especially when we're looking at it in light of a declining population as well as a species that's being considered for Endangered Species Act listing. This year really what's driving the quota is it appears we have a growing population and frankly that's something we've been told for the last couple years. We believe that's happening. So we believe that at least the 20 percent allocation for the harvest is appropriate for this year and that's what we intend to stick with. Again, we don't want to go over at this point. MR. HERNANDEZ: So you're not making any reductions for unreported take this year, is that cornect? MR. SCOTT: Through the Chair. Member Hernandez. That is correct. Twenty percent of the current estimate is 46 wolves. CHAIRMAN BANGS: Thank you. Ms. NEEDHAM: Thank you, Mr. Chair. So 20 percent is appropriate for this year. If wolf		
39 another field season that demonstrates an increase in 40 CHAIRMAN BANGS: Thank you. 40 mumbers of wolves, that's pretty good information. 41 That's good data. If something else is going on,	MS. NEEDHAM: Thank you, Mr. Chair. How many times has the quota been exceeded much like it happened in 2016? Over the time that you've set the quota, how many times has it got to the point that it's actually exceeded like it did in 2016? MR. SCOTT: Through the Chair. Member Needham. Last year was the first time since the quotas had been fairly restrictive. I could take a minute and look back through the harvest history. I don't know the answer to that off the top of my head, but in very small print I do have that probably. MS. NEEDHAM: I appreciate the slide about the Endangered Species Act and why you have to mange to a certain level with respect to that. In our public testimony, which we'll get to eventually as well, there's a perception that the quota in 2016 was exceeded two and a half times the quota. It was a harvest of 29. In my mind, I see that as the two and a half times refers more to the guideline harvest level. So would the State in setting that quota at — which was 22 for 2016, would you say it was exceeded two and a half times. The regulation gives us up to 20 percent. As it came out last year with the estimate we had, that was 22 wolves. We established a quota, a joint quota with the District and the Forest Service of 11 wolves. I mean that's the number that I believe people are going off of. Again, that was done very conservatively as we've done the last several years. If you look at the 20 percent, as found in addition to that we had a wolf get run over that we knew about. So really there were 30	Page	193	46 47 48 49 50 50 11 2 3 3 4 5 6 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 32 42 22 23 23 24 25 26 27 27 28 28 29 20 20 21 21 22 22 23 23 23 24 24 25 26 26 27 27 28 28 28 28 28 28 29 20 20 20 20 20 20 20 20 20 20 20 20 20	any mechanism to go above the 20 percent so when wolf populations are going up, the Department doesn't have any mechanism to go above the 20 percent so when wolf populations continue to go up you're always going to be stuck at that twenty percent in terms of establishing a quota. MR. SCOTT: Through the Chair. Member Needham. This gets to I believe a couple of different questions you had during testimony by OSM. So, correct. At this point in time we are held to the Administrative Code at 20 percent. You, I believe it was you and I apologize if I'm wrong, asked about what is an appropriate level of harvest. Throughout literature and other wolf research and management, harvesting up to 30 percent of a healthy wolf population is deemed acceptable. It won't cause irreparable harm to them. The next jump would be a question about the Board of Game. So the cycle for the Alaska Board of Game in Southeast is coming up. It's right around the corner. Once we get through the first of the year we'll be in kind of proposal mode and proposals will be due to Board Support, Ms. Tibbles, by May 1 I believe was the date that she indicated. Then the meeting would actually occur in January of 2019 for Southeast Alaska. That would be an opportunity for the Regional Advisory Council or other parties to submit a proposal to the Board adjusting that percentage of harvest for Unit 2 wolves. I think though that actually shines the light on making it maybe a little bit more important right now that we get another good field season in to document, you know, ruly is it	Page	195

	Page	196		Page	198
think that kind of paints us all in a little bit different light. CHAIRMAN BANGS: Thank you. Mr. Douville. MR. DOUVILLE: I was just going to say that you deduct any documented illegal or otherwist take from that quota. I guess my question would it be helpful to manage for a certain number that is deemed healthy wolf population instead of fooling around with these 30 percent, 20 percent? In my opinion, 175 would be a good, healthy number to manage for a rather than to play wit these numbers, which takes time. The Board of Ga cycle is three years. The deer populations are sensitive to it. We miss out on subsistence opportunities. It sort of makes sense to manage for number rather than to keep playing with percentages take. MR. SCOTT: Through the Chair. Mem Douville. You hit the nail on the head. That's something the Department, the Forest Service, I belf — I don't want to put words in the Councils mouth f sure, but I believe the Council would welcome that. All the other interested parties. While the wheels turn slow sometimes, they do turn still. I believe that we are at the point where that's our next step. You're absolutely correct in that we're moving around, we're relying on an estimate that we may or may not be able to get ever single year and that was a question Mr. Hemandez asked. But having a number to manage for is extret important. And then potentially using — it was mentioned earlier I believe by Member Phillips lood at a range of 20 to 30 percent using a sliding scale depending on what the estimate was and what we k about wolf numbers based on not only research and but also local knowledge and that's something that we've discussed a lot, is how to nicorporate that. I don't know how to do it exclusively at this point, but I can tell you that over the last	th me a a of ber eve or ct y and mely		and the second s		
three or four years working on this subject in Unit 2 Pve learned a lot about wolves in Unit 2 and what a people are seeing and what people bring to the table process like that is going to take some time. This is a population and a species that people have some pretty strong feelings about acrost the gamut. It will involve the Council for sure, all the communities on Prince of Wales and other communities on Prince of Wales and other communities of the gamut. It will involve the Council for sure, all the communities on Prince of Wales and other communities of the gamut. It will involve the Council for sure, all the communities on Prince of Wales and other communities on Prince of Wales and other communities on Prince of Wales and other communities of the gamut. It was a number or even a range of numbers, that will be determined biologically, socially. There's going to be a lot of input. But to wrap that all up, Member Douville, I think that's exactly what needs to happen at this point. We continue to move in that direction and the RAC will be very involved in that as we start that process. CHAIRMAN BANGS: Thank you, Mr. Ms. NEEDHAM: Thank you, Mr. Chain Switching gears a little bit I have a few questions about population estimation for wolves. Currently or ely on data that the Department of Fish and Gamus provides us in terms of population assessment. According to our analysis and the information that y provided you guys are working on new research techniques for doing that, but there are also other ways to estimate population within Unit 2 and then II probably have follow-ups once you tell me if you're going to continue certain particular research project or not. MR. SCOTT: Through the Chair. Mem Needham. Thank you for the question. As I allude just a minute ago, doing this is time intensive and financially intensive. Obviously we're in the filed this year. The project is formally stated to end in 2019, the funding for it. On the State end side will	e. A ss ss at as be e Scott wwe vas	197	In addition, we are branching out and looking at wolf research in other places and other types of wolf research. Diet analysis, which was another issue that was brought to Fish and Game, the Council, the Forest Service, with concerns about wolves in Southeast. We know in Unit 2 deer are the primary prey issue. What else do they eat. When they're not in a place that has high deer densities, what are they eating there. So we're looking at that. In addition, another concept or part of that puzzle how are wolves in Unit 2 related to wolves across Southeast Alaska. In the status assessment review by the U.S. Fish and Wildlife Service they looked at wolf populations from Northern British Columbia all the way up through Yakutat. So we're trying to look and see how are our wolves in Southeast Alaska related across the region. So those are a couple additional projects that are ongoing concurrently with the population estimate in Unit 2. We've been approached by the Organized Village of Kake. They are also interested in a population estimate for Unit 3 and I'll remind the Council that we do have two intensive management programs in Southeast. One in a portion of 1 A on Gravina Island near Ketchikan and then Central Southeast in Game Management Unit 3. So there's other wolf questions out there, but we're going to continue to work in Unit 2. It just don't see that going away in the near future. MR. SCHUMACHER: I might build on Ryan's answer a little bit. Through this last few years we've learned what we can get with a certain number of hair-boards. Now we're to the point where the research project is really over. The one thing that remains to do is to look at that and see can we refine that so we can do less intensive sampling using the bair-boards and still come up with as good an answer. So we could reduce the labor involved and the cost involved potentially.	Page	199

Page 200 Page 202 There are also techniques that involve confidence in the point estimate for the fall of 2016. cameras and ways of sampling animals with trail cameras distributed around the study area, but those are new Member Douville pointed out another distributed around the study area, but those are new techniques that are in development now and I don't know specifies of how they would work with an animal that lives in social groups and is territorial. It would require probably a different sampling method than something like deer that are just all over the landscape and don't exclude each other from any important factor in management is that this data, by the time we get around to using it, is a year old and the population has changed. So eventually we'd like to get something that provides a more timely estimate that we can incorporate into management that year, but at this point this is the best we have. Something like a photo census may be something that could get us to a more timely estimate, but we need to do some work before we can actually use that. particular place. 11 12 13 14 12 13 14 So I think in terms of how we estimate populations going into the future we're going to always try to use the best available technique available to us. Ideally, with the management plan that Ryan mentioned, is that if we come up with population goals, a range, we also need to come up with a way of establishing what the population is at any point in time and then we also need to come up with management strategies depending on where the requisition is CHAIRMAN BANGS: Do you have a follow 15 16 17 15 16 MR. DOUVILLE: Just a comment. It 18 19 20 appears that even by your numbers that we were right in our assumption that there was twice as many. strategies depending on where that population is relative to the desired range. 20 MR. SCHUMACHER: I would say if it's within the confidence interval, that's possible. 21 22 23 24 25 23 24 25 So those are the three elements of a management strategy that we need. The way we estimate the number of wolves in the study area or the island we always use the best way we can, but for right now the hair-board method is the best way we can. We may be able to refine that, but hopefully in the future if we $\label{eq:CHAIRMAN BANGS: Thank you. Any other questions for the Department. Mr. Howard.}$ 26 27 26 MR. HOWARD: I believe this is when I can ask that question, Mr. Chair. Do you have proposals submitted by the Federally recognized tribes during the Board of Game process concerning wolves? 28 29 30 31 can develop a management plan, we won't have to do an estimate every year. We could do an estimate every few years just to make sure we're within the desired range. If it comes out that we're outside that range one way or MR. SCOTT: Through the Chair. Member Howard. I'm not aware of any specific to wolves, but I'd have to spend some time reviewing those. 32 32 33 34 35 36 37 33 34 35 36 37 another, hopefully we'll have the flexibility management-wise to manage appropriately to bring the population back into that range. MR. HOWARD: Also what process did you use to take away 50 percent of the allowable harvest based on unreported wolf kill? 38 38 39 40 41 42 CHAIRMAN BANGS: Thank you. MR. SCOTT: Through the Chair. Member MR. SCOTT: Through the Chair. Member Howard. We reviewed the two research projects, one by Person and one by Roffler. One of them estimated 47 percent of unreported mortality, one of them estimated 38 percent of the unreported mortality. Fifty percent was used as a very conservative approach. Again, during a time when the population was declining and there was concerns with a potential listing of the senecies. Mr. Douville. MR. DOUVILLE: Thank you, Mr. Chair. We know not all the wolves hit the hair-boards. I mean certain ones hit it every time and some of them don't do it at all, so that work is — you need to refine that some in my opinion. The number 89, today it's 231 in three years. We never believed it was 89. We 43 44 45 46 47 45 46 47 48 48 believed it was twice that much, but your study showed 49 50 Page 201 Page 203 MR. HOWARD: Also what are your thoughts on a manageable – Mr. Douville picked 175, but I'm looking up here. You had a population of 89 and it still survived, so there must be some number there somewhere in your mind that we can settle on. I like this process and I like what I'm hearing and your ""!!!!" worst befure so to see heart of the source where the some the source to see the see that see the that with your hair sampling. Something happened between then and now. In three years you have this number and it's now. In trace years you have this number and it is quite high and this is last year's information. You need to remember that this isn't today's. This is last year were basing it on, so we're lagging a year behind. That's a significant increase. Do you attribute that to better hair sampling or do you suppose they're actually increasing that much? willingness to meet halfway so to speak. I had an uncle — if I may share this, Mr. Chair. He was in Glacier Bay and he was having an issue with flies. They were driving him crazy. He said we should call Fish and Game and have them MR. SCHUMACHER: Through the Chair to Member Douville. Our estimates are just that, they're estimates. We use the midpoint of the estimate because that's the value that's most likely to be correct 12 13 14 15 16 17 regulate the flies so we won't have a fly problem. 14 15 16 17 (Laughter) statistically speaking. The technique does not require that we get a sample from every wolf. It just requires that we get recaptures from the wolves that are sampled. MR. HOWARD: This process debates that comment, so I like this part of it and where we can find common ground. In your mind and in your data what do you think is a safe level to maintain this endangered species? I do this because the State of Alaska doesn't like Federal overreach, but part of the process is when the State doesn't address local concerns, then you have to bring the Federal government in to address the concern. 18 19 20 21 22 We'd have to go back quite a number of slides, but many of you may recall that the first year we did this 2013 we had an estimate of 221, I think, but the confidence interval, so the range in which the true value likely occurred, was very wide. If you look here on the screen, our 95 percent confidence interval, which is usually interpreted to mean that we're 95 percent sure the true value was within that range. The true value could have been anywhere from 130 to 378, but the value that was most likely to be correct based on the data that we had was 231. 23 23 24 25 26 27 28 24 25 26 27 I could sit and talk about this all morning because you could also do DNA studies on the residents of district 2 and see if they're endangered as well. They must be concerned with the deer population. If m not a scientist or a biologist, but I remember my former father-in-law on the Yukon River 28 29 29 30 31 32 The following year we had a much lower estimate, a midpoint of the estimate, but if you look at the confidence interval, the confidence interval overlaps with the previous years. It goes up to 159 whereas the other went down to 130. So statistically when there was a lot of rabbits, there's going to be a lot of lynx. There's a direct correlation there. They trend with each other. 33 34 33 35 36 37 38 39 40 35 36 37 38 39 40 So I'm sitting here and in my mind maybe the wolves, the black bear and the deer trend with each other. So if you put the whole puzzle together, you're going to see, well, the deer population is starting to decline, the wolf population is naturally going to decline at some point when they run out of deer to feed on or whatever they feed on. speaking, there's no difference between those two estimates. That's largely because there's such a large confidence interval with that 2013 estimate. We didn't have a lot of data and we didn't have a lot of As we get closer to the present day, we have a lot more data and a lot more recaptures and the confidence intervals, if you look at them, they keep getting smaller. This year's confidence interval is about 40 on either side, so that's very tight from a statistical point of view. So we have a good deal of 45 46 It seems as though you guys have enough data from area 2 with all the conversation here you could put all these puzzles together. I kind of have my own life at home, so I don't have time to do it, so 45 46 47 48 49 50 47 48 49 50 it's just a suggestion.

Page 204 Page 206 I guess the other question would be would seem that you would have greater ability to would scent hat you would have greated anmy to manage wolves if you had a flexibility there rather than be forced to hit only 20 percent of wolves. So would that management flexibility be useful to you in the Department's job of managing wolves and adjusting the predator/prey relationship to allow humans to continue to get the deer they need? what process did they use to lower it to 20 percent? MR. SCOTT: Through the Chair. Member Howard. You know, I'm not going to paint myself into a hole and put a number out there. I very much appreciate Member Douville. He's consistently put that out. I agree with you 100 percent. We have some excellent information and data from not only our work MR, SCOTT: Through the Chair, Member MR. SCOTT: Through the Chair, Membe Schroeder. There was a lot there and I appreciate that. So I did the math too, but I only used 25 just to make it simple so I didn't screw it up and I got the number too. If's really important to recognize that our estimate is all wolves. That doesn't necessarily mean that every single wolf is going out and eating that number of deer. I mean that's a generalized number of deer per wolf. but from the folks here, the folks that we've interacted with on Prince of Wales. 11 12 13 14 12 13 14 These kinds of plans in my limited These kinds of plans in my limited experience with them a lot goes into them. Not only biology, but social aspects of it goes into them and it should. I mean! think that's appropriate and we should consider the folks who live in Unit 2 and depend on deer for subsistence uses and we should also think about trappers that want to harvest wolves for selling the hides or just because they enjoy trapping. Even folks who enjoy watching a wolf as well. 15 16 15 18 19 20 And then as I mentioned earlier, one of And then as I mentioned earlier, one of the things that we are looking into and trying to understand better is really what compromises a wolf diet. Now the primary prey species is deer, especially for Unit 2 and in most other where deer occur at densities high enough that they can be very successful that's what they're going to focus on. They eat a lot of birds. They eat a ton of salmon. 20 21 22 21 23 24 25 23 24 25 So those are all things that will feed into that. While certainly we can go out and number crunch and come up with an estimate of wolves, that's certainly not going to be the end of it. There's a lot 26 27 28 29 30 31 26 that's going to go in there. Black bear last year when we sampled a group of wolves that had been harvested in Unit 3 we found sea otter in them. So there's a lot of different dietary items. I would want to be very careful making the generalized statement that 231 wolves are going to go out and eal 26 deer a picce because that's a general statement and I don't know how accurate it would be. To be very frank, I don't have a number in my mind and I'm hoping I stay that way until we get to the end of the process and I feel very confident that whatever number and/or range or harvest scale that collective we come up with and agree to, I anticipate having a lot of confidence in that and in the process. 32 33 34 35 36 37 33 34 35 36 37 The second question you asked me was how did we come up with the 20 percent. It was at 30 percent for a very long time. Prior to 1997 there was no harvest guideline for Unit 2 wolves. '97 to 2000 not to exceed 25 percent of the estimated harvest. Between 2000 and 2013 we increased the guideline harvest up to 30 percent. Getting to the other part of your statement, having the flexibility for any wildlife manager is important because folks are on the ground, they're interacting with the users, they have a good sense for what's happening and we want to be able to move around within those guidelines. 38 38 39 40 41 42 39 40 41 I don't think anybody wants to declare war on wolves on Prince of Wales, so sticking with that 30 percent, which is the accepted level of harvest that 43 44 43 44 Again, it is recognized that harvesting up to 30 percent of a healthy wolf population — and healthy means a lot of different things to a lot of different people. It kind of gets back to what would be the member. 45 46 47 45 46 47 48 will -- you know, kind of has a wash impact, a neutral impact on a population, and there's other tools that we would have if we detected that, gosh, there's way too 48 49 50 many at this point. Hypothetically we could approach Page 205 Page 207 And then beginning in 2014 I believe the guideline harvest level was reduced down to 20 percent and that was done through a Board of Game process. I'm not sure which meeting that was done at, the Board of Game for an emergency regulation. We could work with the Feds. I think there's other opportunities for us to accomplish that flexibility if the situation required it. but it was done through the State's regulatory process with a lot of discussion with users and various groups I think we also owe it to the wolves to approach it with the best scientific methodology and management strategy as well as social strategy, we owe it to them to manage that way. Again, I know I keep coming back to the 30 percent and that's acceptable in concerning wolves in Unit 2. CHAIRMAN BANGS: Thank you. the literature and other research projects. At this point I wouldn't want to exceed that at this point knowing that there's other tools available to managers to address it if a need arises. 11 Mr. Schroeder. 12 MR. SCHROEDER: Thanks for a really good presentation on the wolf data. I also really appreciate the efforts of the Department to meet with 13 14 15 16 17 14 15 16 17 18 CHAIRMAN BANGS: Thank you. people on Prince of Wales Island and to come before us in an open and collegial way. 18 Cathy Earlier in our meeting we were dealing with deer. Somewhere buried in one of our reports we have an estimate that a healthy wolf consumes 26 deer a year. So if there are roughly 250 wolves on Prince of Wales Island, that's a lot of deer. Maybe I'll make another math mistake here, but the human harvest of deer on Prince of Wales Island, according to the data that's been presented, has peaked at about 4,000 deer. The harvest of deer by wolves would appear to be, if we use that swag estimate of 26 per, 6,500 deer. So the wolves are well ahead of the bipeds in harvesting deer. MS. NEEDHAM: Thank you, Mr. Chair. In your presentation you stated that the current population estimate techniques do not include the islands surrounding Prince of Wales that are still very much part of Unit 2. Tm wondering, in your experience with interacting with local knowledgeable people within Unit 2 if they've given you feedback on how important those islands may be or how much that data may be leaking they's investign the population activities. 23 23 24 25 26 27 28 24 25 26 27 28 lacking that's impacting the population estimate 29 29 30 31 32 The second part of that question would be whether or not you know how much harvest is coming off of the islands as well. 30 31 32 33 34 When this proposal came up, I thought, gee, this is kind of strange, 30 percent. Boy, that seems a little bit high. Now Im actually wondering whether 30 percent would provide the management flexibility to reduce the wolf population if we saw the next year that instead of there being 231 wolves that there were 350 wolves or a very large number of wolves, which would clearly have a greater impact upon 33 MR. SCOTT: Through the Chair. Member Needham. I would say that the folks that we've interacted with in Unit 2 believe that those other areas that we're not on the ground sampling play a very important role in the overall population and we recognize that. It's a place that – there's a reason that the research began in North Central Prince of Wales, financially, logistically. We can move around essentially and access a lot of different areas. Gosh, what a great thing it was when Hydaburg Cooperative approached us. We were able to connect with TNC as well as the Citizen Science groups and we could expand that out. 34 35 36 37 38 39 40 35 36 37 38 39 40 which would clearly have a greater impact upon subsistence deer hunters' ability to get deer. So I guess I'm working around to a question. Since the Department has increasingly good relations with hunters and trappers on Prince of Wales, if I was in your shoes, I'd kind of want some flexibility there. The proposal, as written, is should not exceed, so it's not demanding of 30 percent harvest level. 41 42 43 44 45 46 45 46 47 48 49 50 47 48 49 50 So we recognize that certainly wolves occur in areas that we're not operating hair-boards. In terms of your management ability, it

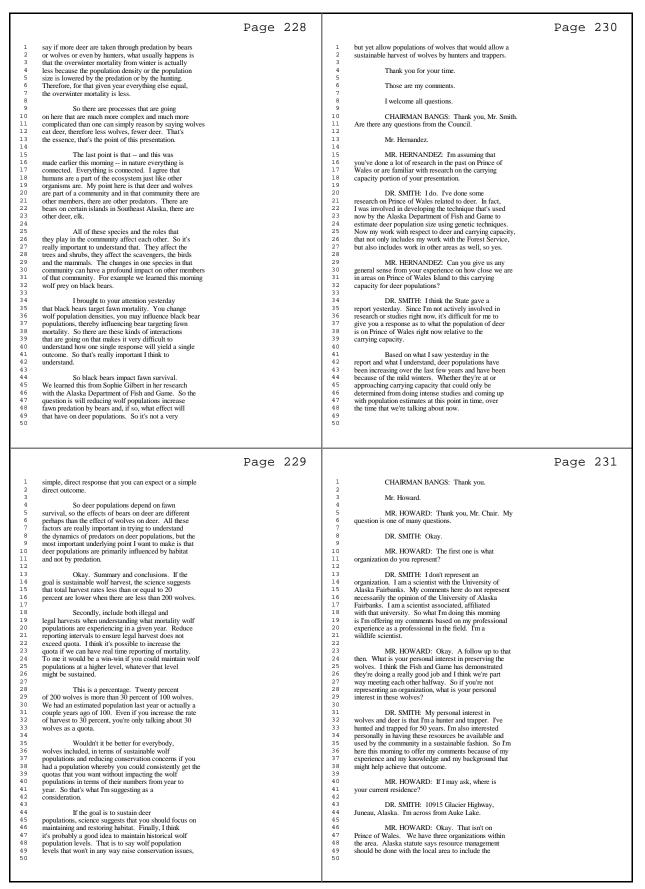

Page 208 Page 210 because you've already set precedence according to your numbers in 2014. While there's always some concern when you take a wolf white users a shays some concern when you take a widensity from a study area and in this case our study area as pretty large at this point in the overall Unit 2 and extrapolate that out to the remainder of the unit, we go under the assumption that the densities are going to be somewhat similar across the ground. You've allowed 34 percent to be caught by trappers and hunters. That left you with your estimated 59 wolves which survived and ended up to 230 today. So it seems like you have a baseline of 59 wolves that will survive and two years later you end up with 230 wolves by your estimate. Some places that's not going to be true. Other places it's probably higher, you know. So that's an assumption that we make and we utilize the area that we can move around in, but certainly in conversations with many folks we're reminded often that MR. SCOTT: Through the Chair. Member Howard. Thanks. You know, I hadn't thought of it or looked at it that way, so I appreciate that. Wolf numbers are dynamic as we all know. As you mentioned as well, they're going to move up and down with prey availability and we don't know much about survival, though we are — you know, that's another part of some of the research that is occurring. 11 12 13 14 12 13 14 there's a lot of wolves out on some of the outer islands. 15 16 17 15 16 17 18 19 20 CHAIRMAN BANGS: Thank you. 18 19 20 Follow up, Cathy. MS. NEEDHAM: The second part to it is Because we can collect genetic material from pups at dens now through scat samples, we're actually able to look through after we go through X however many years of harvest, one year, three years, from the state of how much harvest that you may — are you aware of how much harvest is taken from those islands? 21 22 21 23 24 25 23 24 25 Inwever lamly years to lidvest one year, time years, five years, whatever it might be, we're collecting genetic samples from harvested wolves provided to us by the trappers, which is great, and we are starting to get a glimpse of what our survival looks like as well and that's something that I think would be very useful for everybody, but it's a tough kind of thing to look MR. SCOTT: Through the Chair. Member Necdham. Sory about that. I try to remember multiple-part questions. Yeah, we know there's harvest for sure. I don't have those numbers off the top of my head. We have access to them, but it's not something —you know, we don't report that type of harvest information publicly. We report harvest information on a Game Management Unit level. Sometimes down to the 26 27 26 27 28 29 30 31 28 29 30 31 Thank you again for -- yeah, I appreciate looking at it like that. 32 32 33 34 35 36 37 33 34 35 36 37 For co-operators, like the Forest Service and other folks, we can work at a little bit CHAIRMAN BANGS: Mr. Schroeder and then smaller scale, but we don't make that information available publicly. Frankly, the best source of Patty. MR. SCHROEDER: This is more for the record. I note that what's been on the books has been a harvest guideline and not a mortality guideline and I 38 39 40 41 information is to talk to the trappers in Unit 2. 38 39 40 41 42 CHAIRMAN BANGS: Mr. Douville. a narvest guideline and not a mortainty guideline and do appreciate the real concern when the wolf numbers were extremely low or looked like they were extremely low of being sensitive to Endangered Species Act and all kinds of interests that are placed in Prince of Wales wolves elsewhere. In this room we're concerned them to their concerned that the properties of the placet in the concerned that the properties are the first postulo unit to concerned them. MR. DOUVILLE: I don't have any more 42 MR. DOUVILLE: I don't have any more questions, but I do have a comment. I would encourage the Department to use TEK and apply that while you're setting the quota and not afterwards because there's really nothing to say. It's already been done. I think you need to include those knowledgeable people and you would get better cooperation and they would feel like they were a contributor and probably be more helpful in 43 44 45 46 47 45 46 47 48 about subsistence, not fighting battles with groups over Endangered Species Act things. 48 49 50 Just to get that on the record Page 209 Page 211 Then just in my familiarity with game management over the years I don't recall that -- it was kind of a regular thing that is figured in for other species or in other areas where the wildlife biologist other aspects. Having said that I am encouraging the troops to be more helpful in reporting in a timely fashion and try to stay within the number. I haven't seen anything negative, so maybe there's some hope that that will work a little bit better. species of in outer acass where one winding oriologist in the Department present the data that they have and then they say but really we think there were a lot of wounding losses for these brown bear or really the deer harvest should be 10 percent higher because a lot of people miss or they can't find their deer. CHAIRMAN BANGS: Thank you. Did you have a comment? I don't think that including this estimate for other mortality is kind of a normal thing that you do. If you could just respond to that mostly for the record here. 11 MR. SCOTT: Yeah. Thank you, Mr. Chairman. Through the Chair. Member Douville. I recognize the importance and the value of the relationships that we've had in the unit and with this Council, not only this species, and it is something that I will definitely continue to do as we move forward. 12 12 13 14 15 16 17 18 13 14 15 16 17 MR. SCOTT: Through the Chair. Member Schroeder, thank you. It certainly is front and center here with the Unit 2 wolves. I think that is largely because at times, even if we looked at 20 percent of 89 which we estimated in '14, we're dealing with a pretty small quota. Managing for a small quota has inherent disadvantages and it's very difficult especially when we have an extended sealing period requirement. 18 19 20 21 22 This year it was kind of an interesting dynamic where we had 20 percent and that's what I could put on the table. I appreciate all the efforts of the trappers in the unit. So this Council is aware, we have had some conversations with the trappers in Unit 2 and I feel like they've been very productive. As always, I learn something new every time. But I believe the extension of the production of the council of 23 23 24 25 26 27 28 29 24 25 26 27 We're very fortunate in the management world that Unit 2 wolves have only a two-week world that Unit 2 wolves have only a two-week requirement. The rest of the state essentially is 30 days. But we do do this with other species, bears in particular. Several years ago at this point we went through an exercise where we were trying to estimate harvest rates for black bear numbers when we had black bear concerns across the region and we used – I believe it was 10 percent or, no, 25 percent of a wounding loss correction for some of those to estimate the number of bears that we should provide for harvest. believe those relationships are doing pretty well 28 CHAIRMAN BANGS: Thank you. 29 30 31 32 30 31 32 MR. HOWARD: Thank you, Mr. Chair. Listening to Mr. Schroeder I had to look at my math again. According to 2014, that says 89 estimated wolves, but you took — here it shows a total of wolves taken during that time is 30. So if 89 and 30 were 33 34 33 35 36 37 38 39 40 35 36 37 38 39 This one gets a lot of attention I think because of the species that we're talking about, the location we're talking about and we're dealing with small numbers to manage for in the harvest, but it's not unprecedented necessarily to use it. taken, that's 34 percent of the total estimated population for that year was taken. So now you kind of look at it as 59 wolves survived to this time to 40 41 42 43 44 In two years you went from your CHAIRMAN BANGS: Thank you. estimated 59 wolves after 30 were taken to now 230. If you look at the 30 percent of 230, that's 69 wolves. If If you look at the recommended leaving 175 of those on the table, that's a take of 55 wolves. If's almost your 30 percent comes out better than any other idea if you're running numbers based on what you have here 45 45 46 46 MS. PHILLIPS: Thank you, Chairman Bangs. I have a series of questions if you'll indulge me. Thank you. I want to confirm something. So if a 47 48 49 50 47 48 49 50

		Page	212			Page	214
1 2 3 4 4 5 6 7 8 9 10 11 12 2 13 14 4 15 6 17 18 19 20 21 22 3 24 5 26 27 28 29 33 34 35 6 37 38 9 40 41 42 43 44 45 50	harvester takes a wolf, do they report exact location of where they got the wolf? MR. SCOTT: Through the Chair. Member Phillips. Exact is — we don't get GPS coordinates, but we might get an island or a local name or something like that. So it's relatively exact. MS. PHILLIPS: Thank you. So we had a lot of information in our packets. I mean the analysis, the wolf study, the ADF&G history or documents. In one of them it showed that a large percentage of wolf harvest was in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors on POW. Are the hair-boards in the road corridors and that provides the access to a lot of the areas, but they do incorporate a variety of terrain, forest type, everything from muskegs to timber to other. We try to use a homogenous approach to that so we're not just sampling out of one type of area. By and large, most of them are accessible by vehicle so we can at least get into the area. A lot of them require some hiking and things like that to them, so they're not set necessarily on the road, but we do use the roads to access the areas. MS. PHILLIPS: Thank you. So you said this year's hair-boards are showing an increasing population. So that will mean more wolf harvest potential for 2018. Is that what you're predicting? MR. SCOTT: Through the Chair. Member Phillips. It's kind of like not painting myself into the corner, you know. I don't have a prediction what it's going to be, but it's potential. If we observe continued growth, then yeah. I mean the percentages are based on the most recent estimate. It may in fact provide for additional harvest in the coming year. While the process takes a year from sample collection in the	Page	212	1 2 3 4 4 5 6 6 7 8 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 3 24 25 26 27 28 29 30 31 32 33 34 35 6 37 38 39 40 41 42 43 44 45 46 47 48 49 50	mountain goat kidding. Some moose work, you know, things like that, but those are the primary methods for us. MS. PHILLIPS: So the study says adaptive management for timber harvest and I know there's been significant land transfers to State ownership and potential timber harvest in those areas. We're hearing to avoid this ESA potential how strongly will the Department state that in a potential State timber harvest? Thank you. MR. SCOTT: Through the Chair. Member Phillips. That's an excellent question. We will go at it as rigorously as we would with any other kind of land management activity. CHAIRMAN BANGS: Thank you. Mr. Hernandez. MR. HERNANDEZ: This is also kind of along Cathy's questioning there. How about with the private corporation lands, what's your involvement in management on those lands. MR. SCOTT: Through the Chair. Member Hernandez. Frankly, it's much more limited. At times we have been approached by various corporations and asked for wildlife-related information, but it's not as often as when a big timber contract might come up with the Forest Service. I will say, however, just within the last year we've had a lot of conversations with Sealaska Corporation and that was great. Not only was it an opportunity to sit down and talk about various lands across the region, but it was an opportunity for all of us to kind of dig down into the history of land management as well as wildlife management in some of those places. CHAIRMAN BANGS: Follow up, Don. MR. HERNANDEZ: Yeah, just a comment. Imean just to point out to dother folks there are several hundred thousand acres of private lands as well on Prince of Wales Sland, a lot of which are selected from the most prime habitat that was available to	Page	214
11 22 3 4 4 5 6 7 8 9 10 11 11 12 12 13 14 14 15 16 17 18 19 20 21 22 22 23 33 34 43 53 63 63 63 63 63 63 63 63 63 63 63 63 63	analysis through the winter and into the summer, it's important too to at least peripherally keep in mind that wolves are being harvested during the wintertime so this estimate doesn't include that. We don't subtract those wolves from the estimate. We use the point estimate to be consistent over time, so we're losing some wolves. In addition to that we're gaining some wolves because we're going through another pupping season as well. So it's moving around all the time, the overall number of animals. MS. PHILLIPS: Thank you, Mr. Chair. So are you doing DNA analysis on harvested wolves? MR. SCOTT: Through the Chair. Member Phillips. Absolutely. And it's important to do that so we know which animals have been removed from the population. MS. PHILLIPS: Thank you, Mr. Chair. And to address the elephant in the room, which is like land management, how does Fish and Game influence timber harvest on State lands? MR. SCOTT: Through the Chair. Member Phillips. We have a series of agreements with the U.S. Forest Service and other land management agencies across the state. Our primary mode of influencing those things is to provide comments to timber sales or land management activities. There are standards and guidelines as well listed in the Tongass Land Management Plan as well as the Management Plan Amendment. We also contributed to, myself and the Forest Supervisor as well as the Director of the Fish and Wildlife Programs for the Forest Service, the first day of the meeting discussed the wolf habitat management recommendations that we contributed to. Those are all avenues for us to ensure that wildlife is being managed and erisure that we are taking our mandate to conserve and provide for a variety of uses those wildlife resources over time. Those are the primary avenues. To get down into the weeds sometimes we comment on specific den locations, we comment on buffering activities for	Page	213	1 2 3 4 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 6 27 28 29 31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49 50	select from as well. So it's a significant factor as well. I would hope that maybe in the future these discussions you're having with the Native corporations could be more productive along those lines. Thank you. MR. SCOTT: Through the Chair. Member Hernandez. I couldn't agree more. I also think that it's an important — it's a good opportunity to point out that these several huge tracts of private land through this proposal would still be managed under the State regulation. So private and State lands would be at the 20 percent harvest level. CHAIRMAN BANGS: Thank you. Mr. Douville. MR. DOUVILLE: A five-minute recess? CHAIRMAN BANGS: Yeah, I just thought we could get through the State presentation and then I was going to MR. DOUVILLE: When we're done with the State? CHAIRMAN BANGS: Yeah. Right. Is there any other questions. (No comments) CHAIRMAN BANGS: Hearing none. Thank you, gentlemen. I think we'll take a 10-minute at ease. (Off record) (On record) CHAIRMAN BANGS: Please take your seats. I'd like to come back to order here and go back to the proposal. Are there any Federal agency reports. (No comments) CHAIRMAN BANGS: We have some tribal documents that Ms. Perry is going to read into the	Page	215

Page 216 Page 218 pretty much the same resolution the other two tribes record. submitted. But Craig Tribe for sure. I can't speak for the other tribes, but I'd like Craig Tribe's MS. PERRY: Thank you, Chair. For the record, this is DeAnna Perry, Council Coordinator for the Southeast RAC. I wanted to check to see if Clinton Cook, Sr., tribal president of Craig Tribal Association has called in. resolution on the record. CHAIRMAN BANGS: Thank you. We'll do that right now. MS. PERRY: Thank you, Mr. Chair. DeAnna Perry, Council Coordinator. We received a resolution from the Craig Tribal Association titled: A resolution from the Craig Tribal Association, a MR. COOK: Yes, I'm on the line. Sorry, I was trying to get off a ladder. 11 12 13 14 12 13 14 (Laughter) Federally recognized tribe. A request to increase the wolf harvest level in Game Unit 2. CTA resolution 2017-4. MS. PERRY: Well, don't let us distract you. Would you like me to go ahead and read the resolutions into the record and then maybe you'll be off the ladder and can speak. 15 16 17 15 16 17 Whereas the Craig Tribal Association (CTA) is a duly constituted Indian tribe organized pursuant to the authority of Section 16 of the Act of Congress on June 18, 1934, 48 Stat. 984, as amended by the Acts of Congress June 15, 1934, 49 Stat. 378, and May 1st, 1936, 49 Stat. 1250; and 18 19 20 MR. COOK: Either way you want to. I'm off the ladder now 20 21 22 MS. PERRY: Okay. Well, why don't I defer to you and go ahead and have your comments and I'll be happy to read the resolutions into the record once you're finished if you don't do so. 23 24 25 23 24 25 Whereas the Craig Tribal Association Whereas the Craig Tribal Association Tribal Council is the governing body of the Craig Tribe in accordance with the Constitution and bylaws representing the Association and all its undertakings for the well-being of the Tribe, exercising their powers and authority to make rules and regulations; and 26 27 $\label{eq:MR.COOK: If that's fine by the Chair, that's fine by me.} MR. COOK: If that's fine by me.$ 26 27 28 29 30 31 28 29 30 31 CHAIRMAN BANGS: Go ahead, Mr. Cook. Whereas in 2016 the U.S. Forest Service MR. COOK: Thank you, Mr. Chair. Thank you, Members of the Committee for having this discussion today about the Unit 2 wolf issues. I've been listening off and on throughout the morning, the testimonies of the Forest Service and Alaska Department of Eich and Gen Forest Service and Alaska Department released new information documenting the wolf population is at an increasingly high level based on increasing population data showing higher density of wolves which was then extrapolated to the game unit; 32 32 33 34 35 36 37 33 34 35 36 37 of Fish and Game. Whereas trail camera evidence collected by third parties documented new litters in the game unit. The presence of eight packs with pups presents a 38 38 39 40 41 42 I like some of the comments from the Committee saying how could your numbers be so drastically off when we were allowed to harvest nine last year and that ended up the number being 58 or 59. Now we're at 283, 281, who knows. No numbers on the outer islands, which is a major coup as urrulp epople who do harvest deer and/or wolf do use those islands exclusively sometimes. 39 40 41 significant increase in documented recruitment from the paucity of dens and litters previously reported; and 43 44 Whereas the new information supports a proposed increase in wolf harvest in Game Unit 2 on Federal lands from 20 percent to 30 percent to allow for continued subsistence use of wildlife in view of an 45 46 47 45 46 47 48 exclusively sometimes. 48 I'd like to put on the record in 2016 the Forest Service released new information documenting increasing population of wolves in the game unit; now, therefore, be it 49 50 Page 217 Page 219 the wolf population is at an increasingly high level. These levels are due to mismanagement of not allowing the number of wolves harvested needed to make a stable balance in the ecosystem. Talking with local knowledge and traditional knowledge on the island they feel the numbers should be from 150 to 200 as a sustainable Resolved, the Craig Tribal Association, a Federally recognized tribe in Craig, Alaska, requests the Southeast Regional Advisory Council implement action to increase the wolf harvest for Game Unit 2 on Federal lands from 20 percent to 30 percent. There is a certification. Approved, passed and adopted by a duly-constituted quorum of the Craig Tribal Association tribal council on this 30th day of October, 2017. Six voted yes, zero voted no, I know Unit 2 wolf is a heated topic, but the wolf population is out of control. I have that it was payantants of countries to the control that the the control that when they go hunting they hear more wolves howling at different times and then they've seen deer in units that they have hunted deer. zero abstained, zero were absent, zero were excused. This was signed by Clinton E. Cook, Sr., Tribal 12 12 13 14 15 16 17 14 15 16 17 Yesterday when we read the resolutions Personally, I would like to say I've been a member of the island my adult life and I've never had an interaction with wolves as I have the past few years. So to me that means the numbers are alarmingly high when man has an interaction with weather. into the record we read all three, so I'll go ahead and do that as well. 18 18 A second resolution was submitted by the Organized Village of Kasaan. This is Resolution OVK 17-10-002. A resolution of the Organized Village of 19 20 21 22 Kasaan requesting the Southeast Regional Advisory Council increase the wolf harvest level in Game Unit 2 on Federal lands from 20 percent to 30 percent. I'd like to speak in favor of the Committee looking at the wolf harvest being 30 percent. Also finding a sustained number between 150 to 200. I thank the Committee for your time. I believe that the 23 23 24 25 26 27 24 25 26 27 28 Whereas the Organized Village of Kasaan Forest Service needs to start having true government-to-government consultation on these issues because that's where the traditional knowledge lies and what the numbers could be. is a Federally recognized tribe organized pursuant to the Indian Reorganization Act of June 18, 1934, 48 28 Stat. 984 and May 1st, 1936, 49 Stat. 1250; and 29 29 30 31 32 30 31 32 Whereas the corporate charter of the Organized Village of Kasaan ratified October 15th, 1938 Data, hair-boards, all this, all that. Organized Village of Kasaan ratified October 15th, 15 states in its purpose and existence, "In order to further the economic development of the Indians residing in the neighborhood of Kasaan, Alaska by conferring upon the Organized Village of Kasaan corporate rights and powers and to enable this village and its members to undertake enterprises designed to secure for the members of a corporation and assure economic independence."; and I've seen trail cams where a pack of eight wolves walked right by a hair-snagger, catcher majigi and never rubbed it. So that data to me is inconclusive on 33 34 33 35 36 37 38 39 40 35 36 37 38 39 40 With those comments I thank you for your time in this important matter and Γm strongly supporting the 30 percent harvest level. 41 42 43 44 45 46 Whereas the Organized Village of Kasaan, hereinafter OVK, is governed by a council of elected representatives composed of a president and six members who acted in accordance with the powers granted to it by its constitution and bylaws, ratified on October 15, 1938; and CHAIRMAN BANGS: Thank you, Mr. Cook. Would you like the document that was presented to us by the tribe would you like it read into the record? 45 46 47 48 49 50 47 48 49 50 MR. COOK: Yes, I would. I don't know how you guys want to do it, but all three tribes have Whereas in 2016 the U.S. Forest Service

Page 220 Page 222 released new information documenting the wolf population is at an increasingly high level based on increasing population data showing higher density of wolves which was then extrapolated to the game unit; problem that does not exist and he expressed concerns regarding new classes of citizens with special hunting rights being created. He also expressed concern about esidency criteria and the ability of some Alaskans to harvest 20 halibut a day. Five additional written public comments in opposition were received from Fairbanks residents Francis Mauer, Sharon Alden and Jim Kowalsky for Alaskans for Wildlife. Also Larry Edwards of Sitka and Dr. Robert Sikes, president of American Society of Mammalogists. Whereas trail camera evidence collected by third parties documented new litters in the game unit. The presence of eight packs with pups presents a significant increase in documented recruitment from the paucity of dens and litters previously reported; and 11 12 13 14 12 13 14 Whereas the new information supports a proposed increase in wolf harvest in Game Unit 2 on Federal lands from 20 percent to 30 percent to allow for continued subsistence use of wildlife in view of an increasing population of wolves in the game unit; now, therefore, be it Viewpoints included the extension of season would likely lead to excessive harvest of an already depleted population of wolves. The enforcement of past quotas have failed or have been poorly managed resulting most recently in the season quota being exceeded by over two times. Conservation concerns, including the impact of illegal and legal overharvest, decrease in prey, the decrease in deer population expected because of past, current or planned logging. The lack of consideration of other important factors and deer hunter success besides predation. And more 15 16 17 15 16 18 19 20 18 19 20 Resolved, by the council of the Organized Village of Kasaan requests the Southeast Regional Advisory Council implement action to increase the wolf harvest for Game Unit 2 on Federal lands from 21 22 23 24 25 23 24 25 and deer hunter success besides predation. And more pressure on a wolf population already in trouble appears to be contrary to the basic concept of wildlife 20 percent to 30 percent. Certification. Approved, passed and adopted by a duly-constituted quorum of the OVK Tribal Council on this 30th day of October; 2017 by a telephone poll. Della Coburn voted no; Audrey Escoffon, yes; Glenn Hamar, no; Ronald Leighton, yes; Carrie Sykes voted yes. This resolution was signed by Frederick Olsen, Jr., president and attested by Carrie Sykes, Council secretary. That concludes resolution OVK 17-10-002. 26 27 26 27 28 29 30 31 28 29 30 31 That concludes the public comments received on Wildlife Proposal 18-04. Mr. Chair 32 33 34 35 36 37 33 34 35 36 37 CHAIRMAN BANGS: Thank you, Ms. Perry. Okay, moving on to public testimony The third resolution we received was from the Klawock Cooperative Association Tribe. It is Resolution No. 17-16. Title: A request to increase the wolf harvest level in Game Unit 2. We have Mr. Winston Smith. DR. SMITH: Good morning. Thank you for giving me the opportunity to speak this morning. I have put together a small PowerPoint presentation and hopefully I'll be able to control with this remote here. 38 39 40 41 42 38 39 40 41 42 Whereas in 2016 the U.S. Forest Service released new information documenting the wolf population is at an increasingly high level based on increasing population data showing higher density of wolves which was then extrapolated to the game unit; 43 44 43 44 45 46 47 48 45 46 47 48 This morning I'd like to talk a little bit about proposed action from the perspective of would it really achieve the desired outcome. Whereas trail camera evidence collected 49 50 by third parties documented new litters in the game 49 50 To remind Mr. Chairman and Council Page 221 Page 223 unit. The presence of eight packs with pups presents a significant increase in documented recruitment from the paucity of dens and litters previously reported; and Members, I am currently a principal research scientist with the Institute of Arctic Biology. I was a principal research scientist with the USDA Forest Service Pacific North Research Station. I'm now Whereas the new information supports a proposed increase in wolf harvest in Game Unit 2 on Federal lands from 20 percent to 30 percent to allow for continued subsistence use of wildlife in view of an increasing population of wolves in the game unit; now, retired. I have more than four years of experience as a researcher and involved in wildlife management. My expertise includes deer and in fact my doctoral dissertation was on deer. I've been involved in resolving conflicts among stakeholders and sensitive wildlife management issues, specifically as it relates to deer and endangered species. Resolved, the Klawock Cooperative Association Tribal Council hereby requests the Southeast Regional Advisory Council implement action to increase the wolf harvest for Game Unit 2 on Federal 12 13 14 15 16 17 I'm currently involved also in helping the State of Washington and the State of Oregon with 14 15 16 17 the state of washington and the State of Oregon with similar kind of issues. So I think an important point to consider is not so much whether the desired outcome of this proposal is realistic or is a reasonable outcome to hope for, but to ask the question as to whether the proposed action will actually achieve the desired outcome. lands from 20 percent to 30 percent. Be it further resolved that a majority of the nine KCA Council members whose signatures appear next to their name will constitute the approval of this resolution. This resolution was signed by Patricia Rowan, vice-president; A. Webster Demmert, III; James Williams; Donald Nickerson, Jr.; Eva Rowan. That concludes Resolution 17-16. 18 19 20 21 22 23 24 25 26 27 28 29 As I understand it, the increased quota for wolves in Unit 2 the goals and expectations according to my understanding of having read the proposal or to increase access to valuable resource for 23 24 25 26 27 Chair, that concludes the Native tribal, village and other agency comments that were both trappers and hunters. 28 Secondary, although maybe not directly stated expectation, is that through maintaining wolf populations at lower levels it's going to reduce deer mortality. One of the goals of that is to also have an increase in deer populations with the hope that it would increase deer hunting success. 29 CHAIRMAN BANGS: Thank you, Ms. Perry. Were there any comments from other Regional Councils? 30 31 32 30 31 32 33 34 MS. PERRY: No. Mr. Chair. 33 CHAIRMAN BANGS: Or Fish and Game Advisory Committees or Subsistence Resource Commissions? 35 36 37 38 39 40 35 36 37 38 39 So let's look at each one of these with respect to some of the assumptions and misconceptions that might be involved with this desired outcome given an increase in the wolf quota. First of all, increasing annual wolf harvest does not increase the risk of unsustainable harvest. MS. PERRY: No, Mr. Chair, not on this 40 41 42 43 44 45 46 CHAIRMAN BANGS: Was there any written public commen Well, I'm not going to dwell on that went, in not going to dwen on that because we've heard a lot of excellent reporting and discussion by the Department of Fish and Game this morning on wolf populations, but I think we've seen that over the last few years that when harvest has been maintained at certain high levels that wolf populations do respond to that and that we've seen a decline in MS. PERRY: Yes, Mr. Chair. We received six written comments on Proposal 18-04. One was a general public comment from Curtis Donald Thomas of Ketchikan addressing all Southeast proposals. Key viewpoints were that attempts were being made to fix a 45 46 47 48 49 50 47 48 49 50

Page 224 Page 226 wolf populations as a result of increased harvest. This information is fairly credible because of the improved survey data using similar techniques with deer that they're using with wolves, I think it would not be too presumptious to expect that one of the goals of this proposal is to have not only increased access to a valuable resource but to have a sustainable harvest over the period. So that's an important consideration. using DNA sequencing and estimating populations that The other point I'd like to make about The other point I'd like to make about this is the idea that wolves reduce deer density assumes that deer are limited by predation and I made the point yesterday when I made comments about black bears that although wolves do have an influence on local deer populations through predation, the vast amount of science and knowledge that we have about deer about the populations through predation. If we think about this, wolf populations remain stable. It assumes that wolf populations are always able to consistently respond immediately to increased harvest. In some cases maybe 11 12 13 14 12 13 14 harvest beyond what might be recommended giving existing or current wolf population levels. indicate that wolves do not limit deer populations. 15 16 17 15 16 I want to illustrate this if I might with — and I apologize if I'm oversimplifying what is actually a fairly complex issue. What I have here in the slide is I actually have two diagrams and these two diagrams are like water reservoirs and I want to use the influx of water and the outflow of water and these reservoirs in these two containers to illustrate my point. We've seen that that's not always the case. That's not been supported by both work that's been done by the Alaska Department of Fish and Game as well as research that's in the literature and some of 18 19 20 20 the best available science that is available 21 22 21 The other important point about the ability of wolves to respond to increased harvest is 23 24 25 23 24 25 ability of wolves to respond to increased narvest is the fact that sometimes we consider only the legal harvest mortality. It assumes that by doing that we only – we're assuming that the natural mortality and illegal harvest is negligible. We heard reporting this morning that in some cases illegal harvest or unknown mortality in wolves can be pretty high. If you would bear with me and recognize that each of these containers — actually the size of the container is the habitat for deer and that, what would otherwise be water inside these containers, is actually a deer population. As you go to the bottom of the container, the age of the deer get older. That is all the new water that is coming into this container all the reproduction happens early — near the top of this container early in the year and that deer get older as you go lower in the container. 26 27 26 27 28 29 30 31 I want to add to that new information that just came out in a publication last month in the Journal of Mammalogy, which is an internationally recognized journal that focuses on mammal ecology 32 33 34 35 36 37 33 34 35 36 37 well and it focused on the question of estimating wolf What you'll see here, what I've illustrated, is there's a shut-off valve here such that when the population is near carrying capacity where it's no longer – a deer cannot be sustained beyond this population size because of the habitat and the One of the important points about this publication is that it has been determined that State publications or State estimates or other agency 38 38 39 40 41 42 39 40 41 estimates of wolf mortality can underestimate illegal mortality by as much as 44 percent. That's quite high. carrying capacity, that the pressure from the deer population prevents deer reproduction. There's not much inflow. 42 43 44 43 44 So given the fact that often we don't really have a good handle on illegal or other mortality might be and given that this recent publication has documented from a study that's done primarily in Canada So imagine a water valve where the container is full, that valve is shut. There's no more new water coming in because that valve is shut because the container is already full. It's the same kind of idea with deer populations. When they're at carrying 45 46 47 45 46 47 48 48 can be as high as 44 percent. 49 50 Page 225 Page 227 If in planning harvest quota we're not able to have a good handle on what that illegal harvest is, it could add to the amount of harvest each year that could then result in wolf population decline beyond what we might expect from the illegal harvest quota that we have in place and I think that's a really capacity, you don't get much new deer reproduction. Now, at the same time you have predation where you're losing -- at the bottom of this predation where you're losing — at the foliation in this container you're losing deer through predation and for the most part deer have an impact on the older segment of the population. That's not to say they don't take fawns, but for the most part it's older deer that are actually impacted by wolf predation. mportant consideration This assumption requires that assuring the quota will not be exceeded assumes accurate and timely total harvest. Although the testimony this morning or the reporting this morning, the discussion this morning that indicated that this hasn't happened very often, last year it did happen where because of reporting that more wolves were harvested than the street lead, there was a much higher lead hence. So the point here being is that in both of these containers you actually have these processes going on and as wolves take deer or as water leaves this container and the levels go down, it opens up the valve and you have deer reproduction and you have inflow of water, whichever way you want to think about this, such that the deer population responds to the lower levels as a result of predation, they respond proportionately. 12 12 13 14 15 16 17 18 14 15 16 17 18 stated legal -- there was a much higher legal harvest than the stated quota. So given all that I think it's really important to understand the significance of quota rates and how they may influence wolf mortality and, therefore, call into question whether sustainable wolf harvest are possible over the longer term. proportionately. 19 20 21 22 We call this density dependent response We call this density dependent response in the wildlife management and wildlife research literature. So, yes, wolves can have an influence on the number of deer locally and in a given year, given season, but deer populations respond and that response is not limited by the wolves, it's limited by the 23 23 24 25 26 27 28 24 25 26 27 Okay. Let's talk about assumptions and misconceptions with respect to deer populations. Increasing annual wolf harvest increases local deer increasing annual wolf narvest increases local deer population. It's easy to understand that wolves can take large numbers of deer and especially locally. it's easy to understand and to think about this, well, if wolves are eating deer, then if we have fewer wolves, then we would have more deer. 28 So, given that and looking at this example here, you have more deer in a population not by reducing predation. You have more deer by having more habitat. That's the point of showing these two 29 29 30 31 32 individed in the state of the s 33 34 33 This is much more complex than a simple explanation or a simple reasoning might come to be able to resolve. In fact, we actually heard a comment earlier this morning by one of the members about how these things are all tied together, the ecosystem and the fact that it's a lot more complex. 35 36 37 38 39 40 35 36 37 38 39 40 this slide. The other point that I think is important to understand that maybe many of us who don't have experience with population dynamics and deer or other wildlife populations is that mortality is not always additive. We talk about predation from bears, we talk about predation from wolves, we talk about winter mortality. So I think this is a point that I want to emphasize this morning. Recent deer declines, that's not to say that some of these reports are not that's not to say unts storne to insere reports are no the best local knowledge that may be available, but the evidence that we heard both yesterday and from what has been reported by the State indicates that deer populations are probably at their highest levels because of mild winters. So there's no real evidence that deer populations actually have declined. 45 46 45 46 47 48 49 50 47 48 49 50 The other point to understand is that some of that is what we call compensatory. That is to

So we are proposing to set a quota at 30 percent. It's a subtle difference, but we're not increasing the quota. Right now all we have is a from what I understand from testimony from the Staff is we have a directive from the Board to their Federal managers that they will abide by the State regulation, which is 20 percent of the population as a quota. Like I say, we would not be increasing	Page	235
	Thank you, Mr. Chair. CHAIRMAN BANGS: Thank you, Mr. Howard. Are there any more questions for Mr. Smith. (No comments) CHAIRMAN BANGS: Thank you for your presentation. DR. SMITH: You bet. Thank you. CHAIRMAN BANGS: Is there any other public testimony in the room. (No comments) CHAIRMAN BANGS: Is there any other public testimony from anyone that's listening in on the telephone. (No comments) CHAIRMAN BANGS: Hearing none. We're at the point where we could go into the Council's wishes on what we want to do with the proposal, but we're getting close to lunch time and I think deliberations are going to take a considerable amount of time. So if the Council would like we could break for lunch now. Does that sound like a good idea? It's 10 to noon. How about if we get back here at 1:15. Does that work for everybody? 1:15. Okay, we'll recess until 1:15 this afternoon. (Off record)	Page	233	1 2 3 4 5 5 6 7 7 8 8 9 10 11 12 13 14 15 16 6 17 7 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44	No. 14, which was reduce the harvest level of wolves in Unit 2 from 30 percent to 20 percent of the previous fall population. The Southeast Regional Advisory Council's position is to support the proposal. The rationale for supporting that proposal was that Unit 2 wolf population is at an appropriate level. Twenty percent provides sufficient management flexibility and control at that time. However, this can be changed later if needed. Our third point of rationale was this action addresses current threatened and endangered species listing concerns. So I just wanted to remind the Council that we spent a lot of time on this subject back when the Board of Game reduced that level of harvest from 30 percent to the 20 percent and we did so in that official capacity in our comments to the Board of Game. CHAIRMAN BANGS: Thank you, Cathy. Mr. Hernandez. MR. HERNANDEZ: Thank you, Mr. Chair. I think it's kind of also important to point out that a lot of people have a misconception and I think I kind of came into the meeting with that misconception myself and it was reflected in the resolutions which were presented to us that we are not increasing the quota from 20 to 30 percent because as of right now Federal regulations has no quota in the regulation. So we are proposing to set a quota at 30 percent. It's a subtle difference, but we're not increasing the quota. Right now all we have is a from what I understand from testimony from the Staff is we have a directive from the Board to their Federal managers that they will abide by the State regulation, which is 20 percent of the population as a quota. Like I say, we would not be increasing our quota, we'd be setting a quota and that will essentially change possibly what the Board's directive would be to their Federal managers.	Page	23!

CHAIRMAN BANGS: Thank you, Don.	Page	235

Page 236 Page 238 The rural designation has given us a I also think what I said earlier. If the Department of Taiso mink what I said earner. It the Department of Fish and Game sees a time where the population could sustain 30 percent, then that Federal regulation as it stands would allow the Federal managers to go to 30 percent because it doesn't dictate one or the other as you were saying. certain right to maintain a standard of living without having to stand here with my hand out to the State of Alaska and say I need more money. What it does is I need an ability to take care of my family and this is how it's done. I can go and hunt and I don't have to stand here with my hand out to the State of Alaska and CHAIRMAN BANGS: Thank you, Steve. saying I need more money. We've built a way of living for ourselves to adjust like everything else. This is their way of asking. The Department's numbers support the 30 percent. We're Federal. They're State. They tend to agree and they're meeting them halfway, but I think in order to make sure they meet them halfway that Mr. Douville. 11 12 13 14 MR. DOUVILLE: I don't know if you all MR. DOUVILLE: 1 don't KNOW It you air remember where this 20 percent came from, but I'll give you a little brief. We had a couple meetings in Craig with the various stakeholders if you will, trappers, hunters and interested people. We're being faced with this ESA and they're saying the number is way low. We didn't really believe that, but to err on the side of the resource we voluntarily suggested that 20 percent. 13 15 16 15 16 we support them. 18 19 20 With all the background noise out of With all the background noise out of the way, everyone coming in and giving their opinion, the only opinion that should matter are the people that live there. Otherwise it's almost like – I'll use the example the bridge to nowhere. That wasn't killed by people in Alaska. That was killed by someone from Arkansas, someone from Missouri. Do we really want to send that message that it's okay for someone to have an opinion about our backyards and our way of life that we're used to by savine not to his? 20 But we did that for that season. We were only agreeing for that season. This turned into a Board of Game proposal, which is wrote in stone. That was not the intent of our meetings and that's clear. 21 22 21 23 24 25 23 24 25 I've talked to other people and we all walked away thinking that we'll voluntary take less for the season and then we'll see how things go after that. 26 27 26 27 28 29 30 31 we're used to by saying no to this? 28 29 30 31 One time I was thinking my grandfather probably was taking care of his family for years on a river, has always done this every year with no problem, and one day someone came in and said you can't do it anymore. I think their voice should be heard whether they're here or not as concern. We've tried for years. CHAIRMAN BANGS: Thank you, Mike. Other discussion 32 33 34 35 36 37 33 34 35 36 37 CHAIRMAN BANGS: The State said that they would be available if we have any questions, that Mr. Scott would come up. The Department has back to 1980 information that supports that 30 percent isn't going to hurt the population. You went down to 59. Nature has a way of healing itself. You can go down to 59 wolves and they'll come back to 320. 38 38 39 40 41 42 39 40 41 MS. PHILLIPS: Thank you, Chairman Bangs. May I ask what the motion is. 42 43 44 43 44 That's what the numbers say CHAIRMAN BANGS: There is no motion. I mean the motion is to accept the proposal, the one we've been working on, WP19-04. That was the motion and it was seconded and we're just in discussion. 45 46 47 48 45 46 47 48 The thing I didn't appreciate hearing today is the fact that there may be litigation over this. That seems to be the common way to address this. Instead of coming to sit and talk at the table with us, they'll sit in the background and wait and if they 49 50 Mr. Howard. Page 237 Page 239 MR. HOWARD: Thank you, Mr. Chairman. I wonder if Mr. Cook is online still, Mr. Chair. I had a question for him. don't have their way, the next step is court. They should be here talking to us and seeing how this process works and how we got to where we are now instead of sitting in the background threatening CHAIRMAN BANGS: Mr. Cook, are you litigation. online? I don't think that should even be a part of the process. I don't see anywhere in the paperwork where it says if you don't do what we want, we'll sue you. I don't see that here, so we should just kind of jenore that comment along with everything else that isn't a rural designation. CHAIRMAN BANGS: I guess he's not 11 12 online. 12 MR. HOWARD: Mr. Chairman, if I may, we're kind of in a unique spot, I believe. We represent the Federal side and the State doesn't always 13 14 15 16 17 13 14 15 16 17 Thank you, Mr. Chair represent the reducera stud and the Saute doesn't aiways recognize the subsistence on the same level as we're charged to, if that makes any sense. So you have three Federally recognized tribes, which the intent of the Federally recognized tribes is to — they're recognized as their own government. The State doesn't recognize them as their own government yet. CHAIRMAN BANGS: Thank you, Mr. Howard. Was it Patty or Mr. Douville that raised their hands before Mr. Howard. I know Harvey is next after that. 18 18 19 20 21 22 MR. KITKA: Thank you, Mr. Chair. Maybe I want a clarification on this. I looked at the proposal and it shows a dash between the 20 and 30. Does that mean it's kind of on a sliding scale with a maximum of 30 percent or is it a complete shift from 20 22 Being that we're an arm of the Federal agency and we're here to recognize subsistence users, what I'm getting to is the State in a way decided that the rural designation is based on population and the economy of the community. It's been mentioned in several reports that the economy is a part of the State's equation. I'm looking at it from a village point of view and the economy and the fact that the Permanent Fund was cut in half. 23 23 24 25 26 27 28 24 25 26 27 to 30? 28 MR. SUMINSKI: Through the Chair. Mr. Kitka. Terry Suminski with the Forest Service. The proposal is — the effect would actually be to establish up to 30 percent quota in Federal regulation. Like Mr. Hemandez pointed out earlier, the 20 percent comes from State regulation. It's not in Federal regulation. So the effect of this proposal would be that we would establish a 30 percent quota. Up to 30 percent quota. 29 29 30 31 32 There's two things here you can look at. By allowing more wolves to be trapped, that allows the trappers to make more money, which helps them make up for the difference of the lost revenue that many people live on through the Permanent Fund. Some people could sit here and say I make so much money that the PFD is play money. Some of these people the Permanent Fund has become a part of how they take care of their family and sustain their family. 33 34 33 35 36 37 38 39 40 35 36 37 38 39 percent quota. CHAIRMAN BANGS: Follow up. 40 MR. KITKA: Thank you, Mr. Chair. Does that mean we could amend this proposal and make it kind of a sliding scale from 20 to 30 so that it allows for I think to look at this we have to you almost want to – it doesn't seem fair, but there's a rural designation for a reason. The gentleman here, the reason I asked him where he was from, where his physical location is, is because when you don't get the rural designation you no longer have a say on what happens in someone else's community. years when it starts to shift they can change it? 45 46 45 46 MR. SUMINSKI: Through the Chair. Mr. Kitka. Similar to Ms. Phillips' question. Right now if the proposal was adopted up to 30 percent, you could go from 0 to 30 percent, which would include the 20-30. 47 48 49 50 47 48 49 50

Page 240 Page 242 It's actually more flexible if you say up to 30 rather CHAIRMAN BANGS: Thank you for that, Cathy than between 20 and 30. Mr Douville Thank you MR. DOUVILLE: Thank you, Mr. Chairman. CHAIRMAN BANGS: Cathy and then Robert. Mr. Smith gave us some scientific testimony on deer populations and carrying capacities. He also said that wolf was not a real factor in that. It's mostly the MS. NEEDHAM: Thank you, Mr. Chair. Right now I'm inclined to support this proposal and I'm going to attempt to include my justification on that following our four points that we need to address to establish our record. won't was not a teach in that. It's instay the habitat. When I grew up here and you look at this table on 85, from the 1930s up until the '60s there was quite a restriction on deer. The season was real short, September 1 to November 7. The limit was two. 11 12 13 14 12 13 14 Our first point is whether or not there's a conservation concern for wolves. Our OSM justification says that increasing the harvest quota back to 30 percent is likely to create a conservation concern for wolves. However, I don't believe that the analysis that they provided for us as well as some of the discussion that we've had in the room today have actually indicated that that is true. In fact, some of the information that has been provided in some of the scientific research is that as long as wolf populations are healthy they can sustain a harvest of 30 percent. I want to point out that there was no logging done on this island at that time. It was pristine when I was a young lad. The population of Craig was 150 up until the late '60s. Hydaburg was the same and Klawock, but that was the Prince of Wales population. Coffman Cove wasn't there, Thome Bay, all those other places, so it was very restrictive hunting season and bag limit. But that was because of wolves. 15 16 17 15 16 17 18 19 20 18 19 20 21 22 23 24 25 23 24 25 I know those old-timers tell us how difficult it was to get deer. You see it change in the '50s when the Federal Fish and Game decided that they were going to eradicate the wolves on Unit 2 and they put some effort into it. It ended when we got close to Statehood. It went away, but you see the boost that it gave the deer population just by looking at that record. I know those old-timers tell us how Additionally, I've read through the comments that were provided in public testimony and I feel like in some respects they're a little misleading. This comment of mine kind of goes towards whether or not the Department or whether or not the current mechanism for managing or developing a quota or whether or not management of wolves is — whether or not managers can actually manage wolves in Unit 2. 26 27 26 27 28 29 30 31 32 32 33 34 35 36 37 So wolf does have a significant effect on deer populations. I'm not saying predator control. I was just making a point of information if you hadn't noticed that before. But Prince of Wales was pristine at that time and there was few deer. 33 34 35 36 37 The public comment and the public The public comment and the public testimony – the written public comments indicate that it cannot be. I understand that this is a concern because if that could be shown to be true, then it could potentially lead to another ESA petition down the road. However, the numbers that they use are a little bit exploitive of what actually happened in Unit 2 for one year under these management guidelines where the quota was exceeded. It was exceeded, but it was not exceeded by two and a half times. The quota at the time was 22 wolves. The take was 29 wolves. 38 39 40 41 42 38 39 40 41 I do intend to support this proposal. I think Cathy covered the four criteria. 42 CHAIRMAN BANGS: Thank you, Mr. 43 44 43 44 Douville. 45 46 47 45 46 47 48 I'm sorry, Mr. Schroeder, I didn't see you over there According to the Department, since this type of management system has been in place, that's only — I shouldn't say it was according to the 48 MR. SCHROEDER: It's okay. Italk a 49 50 lot. I think Cathy did an excellent job of summarizing Page 241 Page 243 Department. According to Mr. Douville that's happened one other time. We never confirmed that, but I think it's relatively low of what it's ever happened to be. our rationale for this. I have just a few things to add to that. Basically we're in this situation of dealing with wolves on Prince of Wales recurrently a lot because of land management issues, habitat change I think the management history, for 15 years from 2000 to 2015, where the quota was set at 30 percent of the fall estimated population, I think there has been proof that it has been able to be managed under that sliding scale, that up to 30 percent. due to industrial-scale logging and likely changes that will take place on Prince of Wales as all clearcut areas fill in and become way less productive for all kinds of wildlife. We also have to recognize that wolves on Prince of Wales do have a national constituency. That's a fact. Wolves are an iconic species and people are looking at what we do. I think this Council has been really good at making a record showing that at base the first thing that we consider is conservation So based on those things in addition to other information that we've just talked about, I don't believe at this time that there is a conservation concern for wolves in Unit 2. 12 13 14 15 16 17 14 15 16 17 Is the recommendation supported by substantial evidence such as biological and traditional knowledge. It think I just reiterated that the science shows up to 30 percent of a healthy wolf population can be taken. What we're asking is that quota be set at 30 percent when populations are healthy, but we've incorporated that management flexibility that when wolf populations are not healthy that quota could be set at a lower than 30 percent level. and protection of the species. No one on this Council would like to eradicate wolves on Prince of Wales. 18 Mike did refer to the long Federal program that was aimed at eradicating wolves on Prince of Wales and basically everywhere, which included bounties on wolves and I believe dropping poison bates. That was probably the most significant Federal action dealing with wolves in this century apart from the desecration of the pristine habitat of Prince of Wales. 19 20 21 22 23 23 24 25 26 27 28 24 25 26 27 Further, the traditional ecological knowledge has played a huge part in this in terms of what we know from local trappers and local users on Prince of Wales Island and that information we've heard here as well as collected over the years that we've gotten public testimony with respect to wolves on Prince of Wales Island. Our job is to provide subsistence opportunity when we can by increasing the possibility of more wolves being harvested would benefit subsistence users because they are the takers of wolves on Prince of Wales. It really isn't our job to figure out what the — to completely evaluate the science of 28 29 29 30 31 32 30 31 32 33 34 what a sustainable harvest would be. Will the recommendation be beneficial We have heard from the Department, as Cathy mentioned, that with a healthy population of wolves a 30 percent harvest rate can be maintained. That's sort of I gathered from the global literature on wolves in many environments. We also have kind of close-up examples of the resiliency of wolves to respond to population declines and their ability to increase very rapidly. or detrimental to subsistence needs or users. I believe that it will be beneficial. When wolf populations are healthy, it allows again that 35 36 37 38 39 40 35 36 37 38 39 40 populations are nearmy, it allows again that management flexibility to provide more opportunities for subsistence users on Prince of Wales Island by having that quota be set at 30 percent. So that's providing more opportunity for subsistence users when wolf populations are high. 41 41 42 43 44 45 It's kind of a side product of the inventory work that's been done and the monitoring, but the data presented has shown that wolves are capable of great resiliency. So that's our local experience, which would conform to the more global literature which suggests that 30 percent may be an acceptable harvest Again, we have a mechanism in place to 45 46 assure that a conservation concern isn't created. When wolf populations are low, we can manage under that 30 percent. By the same token, I don't believe that this recommendation will unnecessarily restrict other users. 46 47 48 49 50 47 48 49 50

Page 244 Page 246 Again, the science that we've heard and rate. the science I'm aware of suggest with the healthy habitat that is there that the deer and the warm I think that it's more than just a nice idea or that it's part of our charge to respond to our constituencies and we've had a good deal of input from tribal governments on Prince of Wales. We're fortunate to have expertise in this room of people who really winters we've had there our tremendous numbers in deer have been increasing and this is not going to be a factor. CHAIRMAN BANGS: Thank you, Steve. We've got a little bit of an audio difficulty, so I'd like to take just a short break and then we'll resume. They've got to call the operator and try to straighten it out. The online people are having trouble hearing. know the island. So I think beyond doing something that's just kind of nice or it fits with our mission, I think we really need to act because at present we have 11 12 13 14 12 13 14 annawe rearry face to act because at present we have a one-year time lag in setting quotas for volves. So the quota this year is based on last year's data. Given the resiliency of wolves and according to the data presented, wolves could perhaps double their population in one year. I don't know. Could they increase their population by 50 percent? Could they more than double? So we'll just take a quick break and try to fix that quickly. 15 16 15 16 17 18 19 20 Try to stay close. 18 19 20 (Off record) It means that if the management structure is not there to allow an increase in harvest, we'd have to wait two years. We'd have to wait really a long time. What I'd like to see is that this setting 21 22 21 (On record) 23 24 25 23 24 25 CHAIRMAN BANGS: I'd like to ask Ms. a limit at up to 30 percent provides managers with the flexibility to respond to conditions on the ground possibly in advance of the compilation of precise Hardin to give us some clarification MS. HARDIN: Thank you, Mr. Chair. For the record, I'm Jennifer Hardin, the Subsistence Policy Coordinator from the Office of Subsistence Management. Actually I jux wanted to make a suggestion that might be helpful for the Federal Subsistence Board depending on how you act on this proposal. 26 26 27 28 29 30 31 2.7 So I think we really need to act on So I think we really need to act on this. I'll definitely support the proposal and perhaps after we vote on the proposal we could decide if we wish to suggest that Federal staff work with the Department to establish a population goal for wolves on Prince of Wales. It seems like it's something that would be very beneficial to all parties concerned, but it sounds like also you have like a lot of wrangling to do on that, so it's not something that you do in a meeting like this. 32 33 34 35 36 37 In order for me to make that suggestion I just want to step back a little bit and remind you about the in-season management delegation of authority for this resource. Currently the in-season manager does not have delegated authority from the Federal Subsistence Board to set – it's not clear whether they have the authority to set a Federal quota. 33 34 35 36 37 meeting like this. 38 39 40 41 42 38 39 40 41 42 So if your intention is to support — to ask the Board to change those regulations so that there is a Federal quota established, then you may want to let the Board know how you would like that to transpire. Meaning currently there's a joint Federal and State quota that's established. If your intention with this proposal was to establish a Federal quota that's separate from the State, that should probably be clear to the Board. CHAIRMAN BANGS: Thank you, Robert. 43 44 43 44 Mr. Reifenstuhl. 45 46 47 48 45 46 47 48 MR. REIFENSTUHL: Thank you. I have a question and then comments. So I'm trying to understand if we pass this then is the — because it says up to 30 percent what is the expectation of the Page 245 Page 247 Federal staff? How are they going to decide – are they going to do 30 percent, are they dictated to do – that's not what it says if it says up to and we've already heard their recommendation that it should stay If your intention is to remain with a combined quota and you're talking now about up to 30 percent, no more than 30 percent, you may want to provide some guidance to the Board about who would sestablish that percentage, whose responsibility it would be to set that number, and if you're requesting the in-season manager to do that, are you requesting for them to have the delegated authority from the Federal Subsistence Board to establish quotas. at 20 percent. So that's the question, how it's going to work on a practical sense. But I have comments, so maybe that question can't be answered right now. Do you want me to keep going? 11 CHAIRMAN BANGS: Yeah. CHAIRMAN BANGS: Is that clear to the Council? 12 12 MR. REIFENSTUHL: Okay. So I look at these four questions a little differently. I think given the information we've been given here today from experts, I mean the Department – there's some very prominent names, not in this room, that have studied wolves in the '60s and that heavily influence the literature on wolves. Some prominent names are still – they're in retirement but still around. 13 14 15 16 17 14 15 16 17 (Council shaking heads no) CHAIRMAN BANGS: No. 18 MS. HARDIN: Mr. Chair. Currently --MS. HARDIN: Mr. Chair. Currently — and you may want to look at the regulation as it's proposed. Currently the regulation that's proposed reads that the total annual harvest of wolves in Unit 2 should not exceed 30 percent of the most recent unit-wide, preseason population estimate. That's the new language. Federal hunting and trapping season may be closed when the combined Federal-State harvest quota is reached. Any wolf taken in Unit 2 must be sealed within 14 days of baryest. 19 20 21 22 And then we had somebody from the University of Alaska and I think even though we have heard from local tribes we have heard a lot of scientific information that suggests that the population can sustain 30 percent if it gets to a 23 23 24 25 26 27 28 24 25 26 27 certain level, but we've heard that it's not at that 14 days of harvest. level now. It may get there. 28 So the proposed language doesn't say to establish as you all have talked about. It doesn't say to establish a 30 percent quota. It doesn't say to establish a 40 percent quota. It doesn't say to establish a quota that falls between 20 and 30 percent or 15 percent. There's a wide range and somebody is going to have to make that decision if it's adopted. So it would help the Board to know what your intent was with how this regulation would be implemented should it be adopted by the Federal Subsistence Board. 29 29 I guess tangential to that I think a better routine would be to make a proposal to the Board of Game so it could be up to 30 percent. One big reason to get that is it's on a three-year cycle and if it were up to 30 percent, then they could react quicker. If the population does respond, I think it could be higher, right now the State would be locked into the 20 percent since it's in regulation. 30 31 32 30 31 32 33 34 33 34 35 36 37 38 39 40 35 36 37 38 39 40 But I do think the overwhelming science that we've heard today suggests that there could be a conservation concern and it's not ready — that population on Prince of Wales is not ready for a 30 percent harvest rate. So I believe that it really has been characterized as a predator control rather than the taking it to 30 percent and that will give more subsistence opportunity for harvest of wolves, which is true, but certainly many more comments are really about predator control so there will be more deer. CHAIRMAN BANGS: Thank you, Ms. Hardin. I think that makes things a little clearer. Does anybody have any questions for Ms. Hardin. 41 42 43 44 42 43 44 45 46 MR. REIFENSTUHL: Let's see. It's one on terminology. We're saying set a quota and what we're talking about here is a harvest rate. Twenty percent or 30 percent is a harvest rate and it's dependent on a population number and then that becomes 45 46 47 48 49 50 47 48 49 50

Page 248 Page 250 I guess the quota. You could say that I suppose, but healthy wolf population could support a 30 percent rguess the quota. To count asy that is uppose, out it's not really—a harvest reg is not a quota. Terminology I think we should be—if we're going to stick with this 30 percent, that's a harvest rate. If we don't have a population estimate, you can't apply a harvest rate. harvest and what I meant to say was that a healthy wolf population can support a 30 percent mortality. So that is a little bit different Regardless, I still feel that changing CHAIRMAN BANGS: Thank you. -- I still support changing the quota being from 20 percent up to 30 percent, again allowing that management flexibility dependant upon what numbers are. Mr. Hernandez. MR. HERNANDEZ: Thank you, Mr. Chairman. I appreciate the comments from Ms. Hardin. Those were questions that I had on my mind. It's something that we're going to have to deal with when we do vote on this. There are some real questions that are going to have to be resolved in my mind before we do vote on this. 11 12 13 14 12 13 14 I'd also like to add to this -- kind of reiterate what Mr. Douville was saying, is that I support this proposal, but I also want to make sure that we move forward in a way that we can continue to 15 16 15 that we move forward in a way that we can continue to allow managers to work together on a joint harvest quota eventually, whether that be supporting this proposal at this time, but recommending delay of implementation of this proposal until after a Board of Game proposal can be adopted so that it does not necessarily but the hardship on creating separate harvest quotas between the Federal and State management systems. Meaning that we would recommend that we delay that — we support it, but we delay that action until after the Board of Game process, which is coming up. 18 19 20 The question is whether or not we're in a conservation concern. In my view, I am kind of hesitant to say that we -- at least for this year whether we're to the point where we could be allowing a 30 percent of the population harvest. For this year I think we're -- things are pretty well set. There's a 20 percent harvest rate that's been agreed upon for this year and I think though a proportions. 20 21 22 23 24 25 23 24 25 26 27 26 I also support Mr. Douville saying that we need to develop a population goal for wolves on Prince of Wales Island. I believe that will take a this year and I think that's appropriate 28 29 30 31 I'm also a little bit concerned with I'm also a little bit concerned with this whole question of unreported harvest. If in the future we are able to increase to 30 percent harvest rate, I want to have some assurances that we have a really good handle on what this unreported take is. If we're going to go to a higher harvest rate, I'd kind of like assurances that we will be considering that in the future. little bit of time and may not happen within the current cycle of Board of Game to be implemented. 32 That would be a question back to the Department, I guess, if they intend to be able to develop a population goal in the next year or so in order to have that information available for any Board of Game action that might happen subsequently to be implemented early or if we do need this stoggap measure for a whole Board of Game cycle over the next three years with that higher management flexibility of a 30 percent guide. 33 34 35 36 37 33 34 35 36 37 future. With this proposal before us, I think we obviously want to avoid the situation where we do not have State and Federal regulations aligned. I think that would be a very bad situation, so we do need to be real clear in our recommendations to the Board. What we are doing does create the flexibility that we're looking for in setting these harvest rates and how to go about advising the Board right now as to how to approach that I think is coine to be key to how I 38 39 40 41 38 39 40 41 42 percent quota. 42 I just wanted to clarify that my support for this proposal has those kinds of contingencies on it because it's something that we're 43 44 43 44 45 46 47 48 45 46 47 48 to approach that I think is going to be key to how I going to definitely have to figure out. vote on this. CHAIRMAN BANGS: Thank you, Cathy 49 50 49 50 So I think we need a little more Page 249 Page 251 discussion on that direction that we might provide the Board, so I think we need to have that discussion before I vote one way or another on this. Mr. Schroeder. MR. SCHROEDER: I think procedurally we could get all balled up here. The proposal is really simple and I'm prepared to support it as is. I think we need a major justification and intent written for this that covers a whole myriad of things that we've been talking about here. I don't see that those enter into the proposal exactly, but they should be part of what we're telling the Federal Subsistence Board and the public for how we want to proceed with this I'd be interested in any thoughts on CHAIRMAN BANGS: Thank you, Don. 11 the public for how we want to proceed with this. 12 MR. DOUVILLE: Thank you, Mr. Chairman, I'm not exactly sure how to do that. We could vote the proposal up or down and have a workgroup gin something up to present by tomorrow at noon or if it was voted up, we could have a committee work on the intent and give that committee like a week or two. Otherwise, I think we may just get caught here talking about what if this and what if that and I'm concerned about that. I will support the 30 percent, but I am looking at it as a stopgap measure to get us to the point where we have something better, which would be a target 13 14 15 16 17 14 15 16 17 18 population number. I believe that we need to submit a proposal to the Board of Game for 30 percent supporting what we're doing here so we can be on the same page. 18 19 20 21 19 20 21 22 Also submit one with the intention of establishing that target population and that will iron out some of the bumps we have in the road we've had for the last I don't know how many years of struggling with this percentage. That is what I believe we need to do. CHAIRMAN BANGS: Thank you, Mr. 23 23 Schroeder 24 25 26 27 28 24 25 26 27 Patty and then Mr. Howard. There's no conservation concern. There MS. PHILLIPS: Thank you, Mr. Chair. I support a wolf harvest quota of up to 30 percent with the goal of managing to a target population range of 175-200 wolves or a harvestable surplus. In the interim, this is up to 30 percent harvest is an interim measure until the State and Federal managers can align. seems to be some concern about that, but we're working off the year's before numbers. We've increased our population significantly since then, so I don't see a conservation concern with the 30 percent. 28 29 29 30 31 32 We've got the best data to work with We've got the best data to work with that we've had probably ever and I think it's a good time to use that to establish the target population, but we just need help getting there. We need help from the Federal Staff to help us get to that goal because I don't know how to do it myself. We know how to make a proposal to the Board of Game. We could make two proposals, trying to accomplish the 30 percent and as a better measure a target population goal. Best available science does not support a conservation concern at this time given incomplete hair analysis. The bias could go either way. 33 34 33 35 36 37 38 39 40 35 36 37 38 39 40 We, as a RAC, have discussed and we, as a AAC, nave discussed aim provided recommendations to the Federal program on wolves for a number of years and they've been very deliberative and unbiased discussions. The outcome has been a sustainable wolf harvest population in my opinion on Prince of Wales Island. 41 42 43 44 41 42 43 44 CHAIRMAN BANGS: Thank you, Mike. The proposal provides increased subsistence opportunities when wolf populations are healthy and local qualified subsistence harvesters care about the sustainable harvest and sustainable wolf populations indicated by their participation at stakeholder meetings with State and Federal managers Cathy. 45 45 $MS.\ NEEDHAM:\ Thank\ you,\ Mr.\ Chair.\ I$ do want to correct -I put into my justification something erroneous and I do want to correct that. I referred to science and literature saying that a 46 46 47 48 49 50 47 48 49 50

Page 252 Page 254 bringing their local knowledge and expertise to the one that makes the decision for the island, the way it discussion. This is a sustainable population proposal is right now. Does that make sens CHAIRMAN BANGS: Thank you for that clarification, Terry. Other discussion. CHAIRMAN BANGS: Thank you, Patty. Don. Albert. MR. HERNANDEZ: Thank you, Mr. MR. HOWARD: Thank you, Mr. Chair. It's been mentioned that the concern with — there's no scientific numbers. It's been proven that 34 percent has been taken in the past and the wolf population has bounced back. Thirty-four percent meaning 30 wolves were taken out of the 89 that were estimated. That's Chairman. My concern is for next year. How is the Board going to view this proposal. I mean our intent is to give flexibility in the management of up to 11 12 13 14 15 16 17 18 19 20 12 13 14 30 percent. What do we want to see next year it there's a -- the State presumably will still have a 20 15 16 17 percent harvest quota. One question we haven't asked is what is a realistic expectation for getting that State harvest quota changed through the Board of Game. I don't even know what cycle their in right now, how many years it would take. We've at least got a year next year where we have to decide. I mean I double checked it just to make sure 20 So we're going into 2018 and we're going to look at a 20 percent of the 230. That leaves 180 wolves for the next year going into — excuse me, 2018. So even if you take 30 percent of the 180 that doesn't include the pups that will come out of the 180 going into the summer and into the fall. If you take 30 percent of that, that still leaves you 129, which means you're still above the 59 that happened in 2014. 21 22 23 24 25 23 24 25 Do we want to recommend to the Board that they keep State and Federal alignment or do we want to tell the Board that we want a 30 percent quota on Federal lands for subsistence hunters regardless of what the State does. I think that's a serious question we're going to have to answer before we take this vote. 26 27 26 27 28 29 30 31 28 29 30 31 So there shouldn't be a conservation concern. I believe by passing this there will be common ground found by the stakeholders. It's been said, if you listen to them, they're working real hard to find a solution to this and common ground. I believe CHAIRMAN BANGS: Thank you, Don. I'd like to ask Mr. Scott if he could give us a timeline for the Board of Game. 32 32 33 34 35 36 37 33 34 35 36 37 by allowing the 30 percent you're not going to MR. SCOTT: Thank you, Mr. Chairman and Council Members. I very much appreciate the effort you guys are all going through and we've all worked through this and it's obvious, as it always has been, this is a difficult subject and your work has not gone unnoticed. eradicate the wolves. This is a pretty resilient wolf pack. You heard Mr. Douville talk about the 1950s they tried to eradicate them. Either they didn't have the right 38 38 39 40 41 42 people doing it or the wolves are resilient. Definition of a vegetarian is a poor hunter, so maybe they had vegetarians trying to eradicate them in the '50s, but that's not the point I'm trying to make. So for the Alaska Board of Game the So for the Alaska Board of Game the Southeast Region proposals will be accepted. I think I mentioned before that as soon as we get through the first of the year we'll be in proposal mode for the next upcoming regional meeting. They'll be due to Board Support. Ms. Tibbles, who was here yesterday, be due to her by May 1, 2018 and then the meeting will be scheduled in January -- well, I'm not going to put the cart before the horse, but likely we will have a 42 43 44 43 44 45 46 47 45 46 47 48 I think the numbers speak for themselves. By supporting this we also recognize now the four tribal councils that want this. It isn't 48 three anymore, it's four. Hydaburg has been a part of Page 253 Page 255 a lot of the studies working with the Board of Game. I like the process they're taking, but this will ensure that the process continues if we support the $30\,$ regional meeting in January 2019. Regulations that are adopted by the Board at that meeting, as long as there's no delayed percent implementation or something like that, will go into I don't see a conservation concern. effect July 1, 2019. I don't see a conservation concern. What I do see is the ability for subsistence users to in a way add revenue to their own pockets by allowing them to get a few more wolves. This may not mean a whole lot to some people, but if you add \$300 to a person's pocket that doesn't even have \$100, that's a big impact on their lives. Lots of numbers flying around here CHAIRMAN BANGS: Thank you for that clarification. John and then Steve or was Steve first? 12 12 13 14 15 16 17 In a way, subsistence is intended to ensure that their way of life in that rural community 14 15 16 17 Steve, go ahead. ensure that their way of the in that tural community is maintained and they continue to exist. So I think in supporting this we're not going to hurt that population. Everything says that this population of wolves has been able to bounce back, so I don't think there's a conservation concern here. MR. REIFENSTUHL: While Scott is at the table. I assume that the Board could adopt a 20-30 percent or are there examples of other regulations that have that kind of flexibility? 18 18 19 20 21 22 23 MR. SCOTT: Through the Chair. Member Reifenstuhl. I don't know of examples off the top of my head, but I don't anticipate there would be any—there shouldn't be any barriers to that. You know, in a sense, and it's been discussed in testimony this morning and this afternoon, the way the regulation is Thank you, Mr. Chair. 23 24 25 26 27 28 CHAIRMAN BANGS: Thank you for that, 24 25 26 27 Albert. written provides in a practical sense that flexibility and that sliding scale when the language says up to a certain harvest rate. Also I appreciate the clarification on that. It was very appreciated. 28 MS. PHILLIPS: Thank you, Chairman Bangs. Currently there are two ranger districts in Unit 2, Thorne Bay and Craig. So if we're looking at an in-season manager or who holds delegated authority, 29 29 30 31 32 30 31 32 I think what we've all talked about previously and today again is further clarifying that sliding scale. I actually think that's a good idea especially based on the discussions that we've heard. Thinking about the resource, the wolf numbers as well, if we're in a decline or down low, it's more would it be one or the other District Ranger or would it be a biologist? How is it normally handled? 33 34 33 34 35 36 37 38 39 40 35 36 37 38 39 40 CHAIRMAN BANGS: Terry MR. SUMINSKI: Through the Chair. Ms. appropriate to be here and to provide that use of the resource. If we're over here, then we can provide MR. SUMINSKI: Through the Chair. M Phillips. Terry Suminski with the Forest Service. Good question, Patty. The two Ranger Districts officially still are separate districts. However, the way they're staffed right now, Matt Anderson is the District Ranger for the Craig Ranger District and additional opportunity for that. I don't anticipate any barriers to it, but I apologize. Short of harvest rates or quotas out raphologize. Since they can vary year to year on lots of different populations. So it's not an unheard of premise that we'd be going to the Board with. there's a deputy assigned to the Thorne Bay Ranger 45 45 46 46 Essentially the way the letters were issued recently, there's one for each Ranger District, but for practical purposes the Ranger in Craig is the 47 48 49 50 47 48 49 50 CHAIRMAN BANGS: Thank you.

Page 256 Page 258 MR. SCHROEDER: Just a quick follow up. I don't think that it's wise, at least for this Council Member, to suggest a number because I'm just not knowledgeable enough. My notion would be I'd really like to have Staff get together, Federal and State Staff get together and get paid to spend weeks looking over the data and the national and international literature on this sort of thing. I wasn't thinking of saying 150 or 250 or 2,000 at this moment. Mr. Yeager and then Mr. Schroeder MR, YEAGER: Thank you, Mr, Chair MR. YEAGER: Thank you, Mr. Chair. This is not a question directed to you, but just more of a comment. Our Staff stated that in the justification a sentence that I continue to roll over in my mind is the management of separate harvest quotas between State and private and Federal lands will be difficult for State and Federal managers as well as confusing for the hunter and the trapper. I'm not in favor of creating that kind of confusion and muddying the waters. We're already in that too much already. 11 12 13 14 11 12 13 14 CHAIRMAN BANGS: Thanks, Bob. I'm not going to jump on the math train because I suck at it really bad too, but one number that no one Pve heard recently use in their calculation is the mortality to either illegal harvest or death of wolves from human causes that are unreported. Everybody is using the — well, you have a male and a female, they make this many pups and you have this kind of an increase and all that and you subtract the 30 percent or whatever out of that. 15 16 17 15 16 17 Cathy. MS. NEEDHAM: Thank you, Mr. Chair. So 18 19 20 it sounds like there's some agreement about having a population target to manage from. From what you just said it sounds like it's going to take some time to 20 21 22 21 establish that through an appropriate process. 23 24 25 Well, there's one number in here that's not being accounted for. It's my opinion that you're leaving out a part of the mathematical equation and that right there, 47 percent, even if you use 38 percent, what if that brings you down under 100 wolves. What if it brings you down under 60 wolves or whatever. Then I think we're leaving that out and I'm ort comfortable with supporting this having this part of the equation left out. 23 24 25 I want to clarify that that is not going to happen before this next Board of Game cycle. If that's true, at what point in time would being able 26 27 26 27 to manage on a target population be implementable through the Board of Game process? 28 29 30 31 28 29 30 31 MR. SCOTT: Through the Chair. Member Needham. I think it is accurate to say that it would be unlikely we'd be done by the time the Board of Game meeting rolls around in roughly a year. How that would look beyond that is very difficult to even guess or speculate really. 32 33 34 35 36 37 33 34 35 36 37 In regulation you'll find numerous examples of where management plans have been adopted into regulation, but oftentimes they're not. They're endorsed or something along those lines because within most management plans there's a lot of things that constrict. We've talked several times about having flexibility. While the management plan or strategy, especially done with a transparent, open process like that has an immense amount of power associated with it. CHAIRMAN BANGS: Thank you. Mr. Schroeder and then Cathy and then 38 39 40 41 42 38 39 40 41 42 Mr. Douville MR. SCHROEDER: Thank you, Mr. Chair. Mr. Scott, do you think the Department would be supportive of the idea of setting a population objective or guideline population or Im not sure exactly what the term is? Because obviously if this --tick that the control is the because obviously if this --43 44 43 44 45 46 47 48 45 46 47 48 You can find yourself in a weird spot with it. Sometimes it's not necessarily adopted into regulation. Obviously, as we embark on something like that, we're going to need somebody from the Regional it is part of what our discussion has been although it's not our purview to put that in a proposal form. Also, obviously, if the Department just said we don't want to do that, it's unlikely that would proceed. So Page 257 Page 259 Advisory Council. I hope that would go unsaid. Likely the Board of Game would want to participate in that. At a minimum both bodies would be updated and kept abreast of whatever process and steps had been taken, what's your take on that? MR. SCOTT: Through the Chair. Member Schroeder. That's why they call this the hot seat. progress had been made. (Laughter) MR. SCOTT: I can't necessarily speak for where the Department as a whole is going to land on that. I see no harm however in putting out a number to discuss. But a process like we've been talking about, I don't know that there's an appropriate shortcut to get something in writing that we can start working with right away. CHAIRMAN BANGS: Thank you, Ryan. MR. DOUVILLE: Mr. Yeager mentioned something. Don did too, about this perceived illegal harvest. We need to have really good science, the best available, for any increases in harvest. It's a struggle. I would like to see the same methodology used when it comes to establishing illegal harvest or anything else to take away. So we don't see that. 12 12 13 14 15 16 17 14 15 16 17 18 And keeping in mind, again drawing on some comments that have been made during deliberations, there's a lot of interest in these wolves. Everywhere from the on-the-ground users in the communities in Unit 2 to folks in Montana that are referencing this. I'm certainly not going to let that kind of outside 18 It's just a theory 19 20 21 22 So I don't have a problem if you can document illegal harvest in any way or mortality, anything to take away from the quota, but I want a hard, scientific study just as well to increase it as to take it away, okay. influence if you will pressure us, but we need to be deliberative in the process and think about all the 23 23 24 25 26 27 24 25 26 27 28 I think there's so much good Then I'm agreeable to it. information thank been put out here today. Again, everything from on-the-ground folks, Mr. Cook, we've had onversations and I'm very appreciative that he was on the phone to times we spent in Craig and had those discussions there. It's going to take a while. 28 CHAIRMAN BANGS: Thank you, Mr. 29 29 Douville. 30 31 32 30 31 32 MR. HOWARD: Thank you, Mr. Chair. A question for Mr. Scott. I know it's in Alaska that you're bound by 20 percent, but yet in 2014 it went over to 34 percent. 33 34 I was asked earlier how long do I think 33 a process like that will take. I honestly don't know. But I know if we're working towards that, and especially in the focus that I think we have with at least the folks in this room and I believe also in Unit 34 35 36 37 38 39 40 35 36 37 38 39 40 2, I actually think we'll get there. It's just going What happened when that happened? to take some time. MR. SCOTT: Through the Chair. Member Howard. Was it 2014 or are we talking about last year? Sorry. I'm just checking back through my notes too. So to wrap that all back up, I think that if you have a number and certainly we've heard several iterations of that, there's no harm, no foul, I 41 42 43 44 45 So if we are speaking to 2014, the season, the harvest level was established at 25 wolves. Ultimately, the harvest resulted in 30 wolves. So there's a practical nature especially when it comes to trapping. We saw some of this last year as well where we understand that trappers put out X number of sets in don't think, in putting it out there. 45 46 46 47 48 49 50 47 48 49 50 CHAIRMAN BANGS: Follow up, Bob.

		_					2.50

1	the field and that we're doing even with the			1	going to be.		
2	constricted reporting or sealing requirement, we're going to miss some of that.			2 3	CHAIRMAN BANGS: Thank you, Mr. Scott.		
4				4	I haven't had a chance to really weigh in on anything.		
5 6	I guess in answer to your question nothing happened. We understand that X number of			5 6	I spend most of my time trying to keep track of things. What I see in listening to the concerns about the split		
7 8	wolves over what we were hoping to stay within we took five additional wolves in that particular case.			7 8	quotas and things, my perspective of seeing and hearing		
9	They're obviously accounted for in the harvest, but as			9	what we've been going through is maybe we could move this forward with the justification that we gave and		
10 11	long as there's nothing wrong with the harvest, it's just a sealing period issue really is what those			10 11	then send along our justification as far as giving the Department the flexibility to manage up to 30 percent		
12 13	generally result from.			12 13	and then have the caveat to the Board not to implement		
14	And that's kind of the nature of			14	this, if they choose to adopt it, until the Board of Game makes their actions.		
15 16	trapping to be honest with you with an X number of sets out in the field and here and yonder and difficulty			15 16	Then we put in a Board of Game		
17	getting to them. I think by and large people do a			17	proposal.		
18 19	reasonable job of letting us know when they're coming in. As an example of that we have a pretty good handle			18 19	That's just my own opinion as far as		
20 21	today on how many wolves have been taken this year so far out of Unit 2.			20 21	what I can come up with from listening to everybody.		
22 23				22 23	Cathy.		
24	CHAIRMAN BANGS: Thank you.			24	MS. NEEDHAM: Thank you, Mr. Chair. I		
25 26	Patty.			25 26	was going to suggest the same thing. I think I've tried to bring that up one way or another. Supporting		
27	MS. PHILLIPS: Thank you. So getting			27	this proposal to take effect but delay implementation		
28 29	back to Ms. Hardin's comments to the RAC, she was suggesting that we have some responses to the Federal			28 29	until after a proposal has gone through the Board of Game process.		
30 31	Subsistence Board should this proposal pass. Who would set the separate quota or would it be a separate quota.			30 31	If the Board of Game adopts the 30		
32	I might be overspeaking, but it seems that we want a			32	percent change, then we would have to drop this		
33 34	joint quota as we have now. So who would set that separate quota? If we have delegated authority to the			33 34	proposal because currently we don't have the 20 percent harvest in ours. If the Board of Game did adopt the 30		
35 36	Craig Ranger, so it would be a joint decision between the Craig District Ranger and who at the State? Who at			35 36	percent, then essentially the effect of this proposal is we get what we supported as well as we don't mess up		
37	the State makes that decision now?			37	the system in terms of the joint harvest quota.		
38 39	MR. SCOTT: Through the Chair. Member			38 39	However, if the Board of Game does not		
40 41	Phillips. I think that's kind of the meat of at least this particular issue. It will put us in a position			40 41	adopt the 30 percent, we've still put our proposal forward where we want to have a 30 percent harvest		
42	where rather than being in concert, which I think we			42	quota for Federal Subsistence Program and we'll know in		
43 44	all agree that hopefully we can stay there or get there, potentially for the foreseeable future we're			43 44	time, like after the Board makes its decision, then we would be able to provide the Federal Subsistence Board		
45 46	going to diverge.			45 46	with the guidance that's needed in order to have more than one quota, having a quota in the Federal		
47	By State regulation, we can only			47 48	Subsistence Program and the State program.		
48 49	provide up to 20 percent. That's where we have to stop. I have no reason to believe that I wouldn't have			49	I don't think we can actually do that		
50				50

When we get that information, I have discussions with my leadership as well to make sure that we're in agreeance that we think we can go that high and we think that's the appropriate thing to do for the users and the resource and then we also have a very following right on the heels of all that and this is happening you know this year. It happened like in an afternoon. We get the numbers and we're already behind and we want to get it on the street. That's a	Page	261	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 30 30 30 30 30 30 30 30 30 30 30 30	is a very complex way of trying to diverge. We've got to kind of put the hope on the fact that the Board of Game will pass the proposal that we would put forward that includes the 30 percent based on our discussion and testimony here. CHAIRMAN BANGS: Thank you, Cathy. MR. SCOTT: Through the Chair. Member Needham. I guess one thing that I would recommend potentially that the Council does in that regard is I think it would be appropriate to draft a letter to the Board. Without going into detail ad nauseam what was discussed here, certainly lay out your thought process and your plan and even the confingency part of it and let them know it's coming. Certainly I'll do my part to let them know as well. CHAIRMAN BANGS: Thank you. Anyone, do you have any thoughts. Any more discussion. Mr. Reifenstuhl. MR. Reifenstuhl. Well, I can't support that because if the Board of Game doesn't pass it, then we're still at odds between the State and the Federal system. We've heard a lot of Sentiment on this Council	Page	263
2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 20 21 22 23 24 25 26 27 28 29 30 31	has done an extremely good job in my opinion on the Forest Service side. He and his staff and working with us as well. But I think it sort of puts him, the District Ranger, as well as OSM in a very odd position. Whereas our ability to provide harvest is up to 20 percent as it states now, that may very well change in the future, but obviously we'd be hopeful to participate in the conversation but there's a chance that ultimately they, I suppose, would have to decide what that appropriate level is knowing that we can only go to 20 percent at this point in time. To answer another part of your question, who decides the quota now, it's a — you know, this year was a little bit different. Based on the data we collected from last year's field season, we felt it was appropriate to provide up to the 20 percent level, the harvest rate up to 20 percent. When we get that information, I have discussions with my leadership as well to make sure that we're in agreeance that we think we can go that high and we think that's the appropriate thing to do for the users and the resource and then we also have a very — following right on the heels of all that and this is happening you know this year. It happened like in an aftenoon. We get the umbers and we're already	Page	261	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31	is a very complex way of trying to diverge. Based on the data we collected from last year's field season, we felt it was appropriate to provide up to the 20 percent level, the harvest rate up to 20 percent. When we get that information, I have discussions with my leadership as well to make sure that we're in a greeance that we think we can go that high and we think that's the appropriate thing to do for the users and the resource and then we also have a very — following right on the heels of all that and this is happening you know this year. It happened like in an aftenon. We get the numbers and we're already behind and we want to get it on the street. That's a discussion we have with the Forest Service as well. That's kind of the chain of events. The data comes from the lab, our biologist and statisticians analyze the data, they give us the estimate. We know where our legal bounds are, 20 percent, we take into consideration everything that's going on, pass that through, make sure everybody is comfortable with where we're headed and then have a discussion with the Forest Service just to keep them posted. Typically we would also — and I haven't done this every year and I've owned that in front of this Council, but we would reach out to the	Page	261	2 3 4 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 30 31 32 33 34 35 6 37 7 38 39 40 41 1 42 2 43 44 45	is a very complex way of trying to diverge. We've got to kind of put the hope on the fact that the Board of Game will pass the proposal that we would put forward that includes the 30 percent based on our discussion and testimony here. CHAIRMAN BANGS: Thank you, Cathy. MR. SCOTT: Through the Chair. Member Needham. I guess one thing that I would recommend potentially that the Council does in that regard is I think it would be appropriate to draft a letter to the Board. Without going into detail ad nauseam what was discussed here, certainly lay out your thought process and your plan and even the contingency part of it and let them know it's coming. Certainly I'll do my part to let them know as well. CHAIRMAN BANGS: Thank you. Anyone, do you have any thoughts. Any more discussion. Mr. Reifenstuhl. MR. REIFENSTUHL: Well, I can't support that because if the Board of Game doesn't pass it, then we're still at odds between the State and the Federal system. We've heard a lot of sentiment on this Council that we don't want to do that. I guess I've never heard an agency like Fish and Game-Wildlife and their ability and kind offers of working with people on the ground and offers to really look at what everyone is saying and even telegraphing that they support this idea and I think taken them at their word, I think that a Board of Fish proposal is the best way to go. I think being at odds it just sets it up for that potential and I can't support that. CHAIRMAN BANGS: Board of Game? MR. REIFENSTUHL: Board of Game.	Page	263
2 3 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 33 34 5 36 37 38 39 40 41 14 24 43 44 44	has done an extremely good job in my opinion on the Forest Service side. He and his staff and working with us as well. But I think it sort of puts him, the District Ranger, as well as OSM in a very odd position. Whereas our ability to provide harvest is up to 20 percent as it states now, that may very well change in the future, but obviously we'd be hopeful to participate in the conversation but there's a chance that ultimately they, I suppose, would have to decide what that appropriate level is knowing that we can only go to 20 percent at this point in time. To answer another part of your question, who decides the quota now, it's a you know, this year was a little bit different. Based on the data we collected from last year's field season, we felt it was appropriate to provide up to the 20 percent level, the harvest rate up to 20 percent. When we get that information, I have discussions with my leadership as well to make sure that we're in agreeance that we think we can go that high and we think that's the appropriate thing to do for the users and the resource and then we also have a very following right on the heels of all that and this is happening you know this year. It happened like in an afternoon. We get the numbers and we're already behind and we want to get it on the street. That's a discussion we have with the Forest Service as well. That's kind of the chain of events. The's kind of the chain of events. That's kind of the chain of events. The stata comes from the lab, our biologist and statisticians analyze the data, they give us the estimate. We know where our legal bounds are, 20 percent, we take into consideration everything that's going on, pass that through, make sure everybody is comfortable with where we're headed and then have a discussion with the Forest Service just to keep them posted.	Page	261	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 38 39 40 40 40 40 40 40 40 40 40 40	is a very complex way of trying to diverge. 		Page	264			Page	266
just wanted to put out the to the Federal Subsistence Board of Game proposal in front of the Board afte and then they would not. You have a m recognize you have to ac sorts of recommendation Council to provide that a Federal Subsistence Boa the table in support of th CHAIRMAN B Don. MR. HERNA One obvious thing will or proposal and make our v want to see alignment wi if the State does not com management to institute to that position, they'll just and simple. So we are g whether or not they will just tal when they decide on this CHAIRMAN MR. DOUVII what you said. We're at State regulation although there's some areas where would be steelhead trout tried to work to keep thi ried to work to keep thi good of resources and us but there's nothing that si	otion on the table, so I t on your motion, but those s are also available to this s your recommendation to the d. But you do have a motion on s proposal currently. BANGS: Thank you. NDEZ: I think there's kind of cur here. If we pass this ishes known to the Board that we h State and Federal regs, but ply, we want the Federal his. 30 percent harvest quota. Desn't want to be put in defeat this proposal, plain ving them that option as to to be in that position or not te that into their own hands proposal. BANGS: Mike. LE: I'm just responding to odds at different times with we try to work together we do not align. An example and things like that. We have gs less confusing for the ers to try to work together, ys we have to. BANGS: Thank you, Mike. Any			1 2 3 3 4 5 6 6 7 8 8 9 10 11 12 13 14 14 15 16 17 18 19 20 21 22 23 24 4 25 5 36 37 38 39 40 41 44 45 46 47 48 49 50	here. The numbers speak to show the wolves will survive even when they hit 59. These are their numbers, not mine. I don't live on Prince of Wales, but I hear them through their resolution. If we implement the 30 percent, nothing is going to happen even though Alaska statute says it should be 20. Nothing is going to happen. Mr. Scott had said that because I asked him. By putting 30 percent on the table all it does is give the Ranger at the time a benchmark. So next year when you look at the 30 percent of 184, that gives us you know, the Ranger can stop trapping when the number hits 129, which is still above 59 that's been demonstrated it was able to bounce back to 320. CHAIRMAN BANGS: Excuse me, Mr. Howard. Do you have any new information? MR. HOWARD: Mr. Chairman. I'm saying this because it seems like sometimes it feels like I'm out in the hallway talking to myself because I sisten to others and they say there's no numbers to support any of this. I don't have any Magic Markers or anything to put it up here where we can look at it together. The reason I'm doing this is because sometimes it seems like you're being listened to but you're not heard. Thank you, Mr. Chair. CHAIRMAN BANGS: Thank you for that, Albert. Any other comments. Mr. Douville. MR. DOUVILLE: Mr. Chair. I support this proposal as is. I'm not interested in confounding the issue. We have the tribes behind us, we have subsistence users that are supporting it. Everybody is supporting it. If the State can get on board with it, there may be a little bit of lag time, but I think we should move on. CHAIRMAN BANGS: The question has been called for on Proposal WP18-04. Can we get a roll call, please, Harvey.

	CHAIRMAN BANGS: Thank you, Harvey.			1 2	Terry got on, but this is Jeff Reeves with the Forest Service. I'm actually the analyst on the proposal.		
	Mr. Hernandez, comment.			3 4	CHAIRMAN BANGS: Okay. Great. Go		
	MR. HERNANDEZ. Yeah, Mr. Chairman. I don't know if is' necessary to make a motion, but I do think it's important that we do include with this our recommendations to the Board as to how we'd like to see it implemented, so I don't know how to go about doing that. CHAIRMAN BANGS: The Vice Chair just mentioned a very good possibility of making a work group that we could work on something to bring before the Council tomorrow. Work on it tonight. Anyone interested in being part of that workgroup if that's the wish of the Council tomorrow. Work on it tonight. Anyone interested in being part of that workgroup if that's the wish of the Council Longith. Anyone enterested in a workgroup, yes. CHAIRMAN BANGS: The willing to participate in a workgroup, yes. CHAIRMAN BANGS: Anyone else. Patty. Mr. Schroeder. MR. DOUVILLE: I'll do that. CHAIRMAN BANGS: Okay. Mr. Douville. Sounds good. Okay. We have a few people that are willing to step up to the plate and have a workgroup. Cathy, do you want to as well? MS. NEEDHAM: No. CHAIRMAN BANGS: Bob. MR. SCHROEDER: Perhaps if the charge of the workgroup, since we're partying tonight (Laughter) MR. SCHROEDER: is that we may not have final language, but if we have like points and then we could spend a little bit of time, as we've done with other proposals, after the meeting working out a more convincing justification. That's just a			5 6 7 8 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 4 35 36 37 38 39 40 41 42 43 44 45 46 47 48	MR. REEVES: All right. So this Proposal WP18-05 the executive summary is on Page 181. The analysis begins on Page 183. It's actually real similar to the one that you took up earlier this morning. This one is related to Unit 3. It's a proposal that was submitted by this Council and it's asking that both the Federal hunting and trapping seasons be lengthened for wolves in Unit 3 to match those currently under State regulations. It would pretty much extent the Federal hunting season to the end of May and forwards the opening date on the Federal trapping season to November 1st. The Federal Subsistence Board has not made a customary and traditional use determination for wolves in Unit 3 so all rural residents of the state can harvest the species. The Board adopted existing State hunting and trapping regulations for Unit 3 in 1990. In 2010, the Board rejected a couple proposals, which would have shortened both the Federal hunting and trapping seasons for wolves in this unit. Current estimates of the Unit 3 wolf population are based on average territory and pack size which is kind of derived from wolf research conducted in similar habitat on Unit 2. Past conversations with trappers, hunters, pilots and other biologists, along with information obtained through trapper questionnaires, seem to suggest that wolf numbers increased in the unit during the 1990s in a response deer numbers. More recently, increases in moose abundance and their distribution are believed to have helped to sustain high wolf numbers in the unit. In most years, trapping is the primary method of harvesting wolves in Unit 3, with access to those locations being by boat. Some years, however, the number taken with		
	with other proposals, after the meeting working out a			47	wolves in Unit 3, with access to those locations being

We'll move on to the next proposal. We're at Wildlife Proposal 18-05, lengthening hunting and trapping season	Page	269	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 36 37 38 39 40 41	by hunters are harvested opportunistically during huns for other species. Harvest has been reported in all months, with the majority of the May harvest being taken by nomesidents. It's believed that pelt quality in May is reduced which explains why there's probably such a low level of harvest by Federally qualified subsistence users. If adopted, this proposal would provide increased harvest opportunity for Federally qualified users in Unit 3. The proposal is unlikely to substantially increase the harvest of wolves in the unit because Federally qualified users can already harvest on the same lands under the same timeframe under the State regulations. Federal regulations, as I mentioned in the first proposal this morning, also allow for customary trade and it is not allowed under State regulation could be used for customary trade. Adoption of the proposal is unlikely to substantially increase the harvest of wolves over present level due to the pelt condition. Harvest during May when wolves are denning could possibly result in mortality of breeders or helper animals that are influential to the pack persistence and denning during that time. Staff recommendation is to support the proposal wall bring the Federal hunting and trapping seasons for Unit 3 into alignment with State regulations. Adoption of the proposal wolld allow subsistence users to engage in customary trade should they desire from any wolves harvested on Federal lands during the expanded seasons.	Page	27:
	Cathy. MS. NEEDHAM: Yes, Mr. Chair. When I so quickly said workgroup, I should have also said that our workgroups have typically including Staff to help with that and it might be good to invite one or two of our Staff to help our workgroup participants work through that process of making those recommendations to make sure that we know to help with that piece of the process. Id also like to put on the record or however we need to make the decision that the Regional Advisory Council actually put forward a proposal to the Board of Game. CHARMAN BANGS: Thank you, Cathy. Any other comments. Id like to take a little break here if we're done with this particular subject. (No comments) CHAIRMAN BANGS: Okay. We'll take a 10-minute recess. (Off record) (On record) CHAIRMAN BANGS: Please take your seats. Id like to take a moment here to ask if there's anyone that has any public or tribal comments on non-agenda items either on the phone or in the room. (No comments) CHAIRMAN BANGS: Hearing none. We'll move on to the next proposal. We're at Wildlife	Page	269	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43	by hunters are harvested opportunistically during hunts for other species. Prior to the 2009 extension of the wolf trapping season, on average three wolves were trapped annually in Unit 3 during the month of May. Since the November 1st season extension took effect, the harvest has increased only slightly, averaging four wolves per year. As previously stated, despite the earlier November I st opener for wolf trapping, most trappers do not set traps or snares for wolves until after the conclusion of the waterfowl season in order to avoid catching duck dogs and to avoid catching early bears in early November. Page 276 Page 278 single digits annually and make up a very small percentage of overall harvest in that Unit. CHAIRMAN BANGS: Opposed (No opposing votes) Unit 3 deer harvest by Federal designated hunters makes up a higher percentage of overall harvest compared to Unit 1B. However the average number of deer harvested per Federal designated hunter permit in Unit 3 is low. CHAIRMAN BANGS: Motion carries. Moving on to the next proposal. We did the black bear in Unit 2 proposal yesterday. We'll do WP18-09, limited designated hunter harvest limits for deer in Units 1B and 3. Further, no more than two Federal designated hunters report harvesting for five or more recipients annually in these units. This suggests that limiting designated hunters to five recipients would affect very few hunters and consequently have little effect on the deer population. 11 12 13 14 MR. SUMINSKI: Good afternoon, Mr. Chairman. Council Members. My name is Terry Suminski with the Forest Service. Sorry for missing the last proposal. Proposal WPI8-0 Prequests that the Federal designated hunting provisions limit the number of Federally qualified recipients that a designated hunter may hunt deer for in Units 1B and 3. This was submitted by the Wrangell Fish and Game Advisory Committee. 12 13 14 15 16 17 15 16 17 18 19 20 The OSM preliminary conclusion is to oppose Proposal WPI8-09. There is no need to restrict the traditional practice of hunting for others because doing so will likely have no measurable effect on the deer population. The number of deer taken annually by designated hunters is small compared to the total harvest. Designated hunters rarely report harvesting for more than five precipients. 20 21 21 22 23 24 25 23 24 25 The analyst is Justin Koller. for more than five recipients. MR. KOLLER: Good afternoon, Chairman Bangs. Members of the Council. For the record, my name is Justin Koller. Im a subsistence biologist for the United States Forest Service, specifically for Sitka and Hoonah Ranger Districts of the Tongass Adopting this proposal would also not address the proponent's concern about edible meat not being salvaged as this is addressed through law 26 27 28 29 30 31 26 27 28 29 30 31 enforcement. National Forest. That concludes my presentation on this The executive summary for WP18-09 can be found on Page 211 of your books. The analysis begins on Page 213. As Mr. Suminski indicated, WP18-09 was submitted by Wrangell Fish and Game Advisory Committee, requesting Federal designated hunting provisions limit the number of Federally qualified proposal. 32 32 33 34 35 36 37 33 34 35 36 37 Thank you and I welcome your comments and questions CHAIRMAN BANGS: Thank you, Justin. recipients that a designated hunter may hunt deer for in Units 1B and 3. 38 39 40 41 42 38 39 40 41 42 Anyone have any questions. The Federal Designated Hunter Program currently does not have a restriction on number of recipients. This proposal requests to limit the numbe of recipients to a maximum of five in Units 1B and 3. (No comments) $CHAIRMAN\ BANGS:\ I\ have\ one\ question$ There's rumors, and I know Mr. Yeager is aware of it, that there's been some abuse of this program and I 43 44 43 44 45 46 47 48 45 46 47 48 The proponent stated the following three reasons for this proposal. Number one, the designated hunter program allows for over exploitation of deer within Units 1B and 3. Number two, some don't see this data reflecting that, so maybe it's just rumor, but it seemed like there's a considerable amount of deer harvested by a couple different individuals and I think that's where this proposal came from, but I'm Page 277 Page 279 hunters use the designated hunting system to take upwards of 40-50 deer in a hunting season, sometimes taking only the hind quarters and back straps. Number three, deer populations in these units will increase by not really sure if that's the case. Did you find anything that was a discrepancy? MR. KOLLER: Mr. Chair. Members of the Council. I did not find anything in my analysis that suggested that the program was being abused. Now that doesn't necessarily mean it is not abused. If it is indeed abused, it's not being reported of course to us. So by limiting the number of recipients a designated hunter could hunt for would not have the desired effect of alienteria abuse of the way to the the limiting the number of recipients a designated hunter may harvest for during a season. This will allow more hunters to be successful while taking less time to harvest their annual limit. In 2002, proposals WP02-04, -05, and -06, three proposals, sought to limit either the eligibility of designated hunter recipients or the number of recipients a designated hunter could hunt for in a year. WPO2-10 in 2002 sought the prohibition of designated hunting within a portion of Unit 3. of eliminating abuse of the program that goes unreported anyway. 12 12 13 14 15 16 17 18 14 15 16 17 18 CHAIRMAN BANGS: Thank you. Any questions. Later on in 2012, statewide proposal WP12-02 requested to limit the eligibility of designated hunting recipients while WP12-13 requested to limit the number of recipients for whom a designated hunter could harvest deer for in Units 1B and Unit 3. Mr. Douville. MR. DOUVILLE: The proponent says that upwards of 40 to 50 deer. Have you seen any designated hunters that hunted for 19 different people? 19 20 21 22 23 24 25 26 27 28 29 That proposal, similar to this proposal, requested to limit recipients per designated hunter to two. MR. KOLLER: We have not, no. As I said, in those units there are only a maximum of two people in the past few years have reported harvesting for more than five recipients. I think you can find 23 24 25 26 27 All of these proposals were opposed by this Council and rejected by the Federal Subsistence not more unan tive recipients. I timin you can find the answer to your question also on Table 1, which is Page 218 under Unit 3 on the right-hand side of the table, you can see the maximum number of recipients that designated hunters have harvested for since 1 believe 2010. Board. 28 Deer in Unit 1B exhibit low population densities but are believed to be stable. The left side of Table 1 on Page 218 shows that deer harvest in Unit 1B has remained low, suggesting that harvest is not the 29 30 31 32 33 30 31 32 33 34 primary driver of deer population levels. So the maximum is 11. 34 Deer harvest in Unit 3 has remained relatively stable with a slight increase in the past few years, possibly reflecting an increased population. Both units were subject to harsh winter conditions in 2006 to 2009, which caused a decline in deer populations. Data suggests that deer populations are rebounding from that decline and there have been no harvest restrictions. CHAIRMAN BANGS: Thank you. Any other 35 36 37 38 39 40 35 36 37 38 39 40 questions MR. REIFENSTUHL: Well, all I can say is that it got under someone's skin because it had to convince however many people were on the Wrangell Advisory to get this through. So a majority vote. I 41 42 43 44 45 46 Harvest regulations outlined on Page 216 are conservative in these units with buck only hunts and limited seasons in portions of Unit 3. Deer harvest in Units 1B and 3 is outlined once again in Table 1 on Page 218. Harvest within the Federal Designated Hunter Program from Unit 1B has been in the guess they believed the rumor. 45 I would agree this is an enforcement issue and not a conservation issue. 46 47 48 49 50 47 48 49 50 CHAIRMAN BANGS: Thank you. Any other

To aid recovery of the deer population ADF&G manages deer in portions of Unit 3 under very restrictive seasons and bag limits. Mitkof Island, Woewodski Island, Butterworth Island and the Lindenberg Peninsula on Kupreanof Island are managed under a two-week one buck season. The goal of this conservative harvest strategy is to help rebuild the population by limiting human-caused mortality while still offering some harvest opportunity. The Department recognizes the potential hardship short seasons and restrictive bag limits placed on hunters hoping to harvest deer for subsistence purposes, particularly those unable to hunt for themselves due to age or physical disability or those with limited opportunity to hunt for themselves due to employment or other obligations. Allowing Federal designated hunters to harvest deer for an unlimited number of beneficiaries reduces the effectiveness of individual bag limits as a means of limiting harvest. The only other way the department can limit the deer harvest to facilitate growth of the population is to restrict seasonally. After all, irrespective of how many Federal designated hunter tags a hunter has in his or her pocket, they can only harvest so many deer in a limited amount of time. While we recognize the primary intent of the Federal designated hunter provision, it should also be recognized that the greater harvest enabled by this provision has the potential to inhibit recovery of	Page	281	1 2 3 4 5 6 6 7 8 9 9 10 11 12 13 14 15 6 17 7 18 19 20 21 22 23 24 5 26 27 28 29 30 31 32 23 33 34	you again. PERRY: None received, Mr. Chair. CHAIRMAN BANGS: Subsistence Resource Commissions. Is there any written public comments. MS. PERRY: Yes, Mr. Chair. Two written comments were received on Wildlife Proposal 18- 09. One comment was received from Curtis Donald Thomas of Ketchikan addressing all Southeast proposals. Key viewpoints were that attempts were being made to fix a problem that does not exist and he expressed concerns regarding new classes of citizens with special hunting rights being created. He also expressed concern about residency criteria and the ability of some Alaskans to harvest 20 halibut a day. Another comment was received in support from Max Worhatch, chairman of the Petersburg Advisory Committee. Viewpoints included a concern that some game management units with short seasons and small bag limits set by the State to conserve and manage a sustainable herd are subject to an unrestrained excessively liberal Federal Designated Hunter Program. Although he supports this proposal, he	Page	283
	harvest of at least 900 deer, a target that has not been achieved in over 10 years. (No comments) CHAIRMAN BANGS: Hearing none. We'll on to the wish of the Council. Mr. Hernandez. MR. HERNANDEZ: Thank you, Mr. man. I'll move to adopt Wildlife Proposal 18-09. MS. NEEDHAM: Second. CHAIRMAN BANGS: Mr. Hernandez moved to and Ms. Needham second. Discussion. Mr. Yeager. MR. YEAGER: Thank you, Mr. Chair. For cord, this proposal was drafted out of the gell AC by members that have witnessed some of the which they felt was coming from the Federal atted Hunter program. These instances were sed by members of the AC and one particular in Wrangell has been touting about their ability vest over 100 deer in the season. Members of the AC also witnessed a boat gin with up to — I think it was around 12 to 14 at the boat. It was tied to a dock and the same bringing that vessel in got in another boat and the back over to hunt more deer, leaving that boat need with deer hanging in it. Also members of C have found pretty much whole carcases inside sters in our harbor where very little if any meat alwaged off of the deer themselves. Also just a little bit of background would like it stated that this is why this was ted and why it came from the Wrangell AC. Thank you. CHARMAN BANGS: Thank you, John. Was any enforcement involvement or no one			1 2 3 3 4 4 5 6 6 7 8 9 10 111 12 13 14 15 16 17 18 19 20 21 22 23 32 4 25 26 27 28 9 30 31 32 33 34 35 36 37 38 39 40 41 42 44 45 46 47 48 49 50	Even though those deer are going to hopefully, maybe not in all cases, people who can utilize that deer, it still kind of creates a situation where if you're having fewer people take more deer out of a limited resource, it just kind of leaves less available for other people that want to harvest. If they perceive that as being unfair, then we're going to continue to get these proposals presented to us. At this point I think this one is reasonable enough by setting a limit of five receipients, which I think is generous enough to take care of people that need deer that arent able to go out and harvest on their own. All factors considered, I think I'm going to support this proposal. CHAIRMAN BANGS: Thank you, Don. Any other comments. Steve. MR. REIFENSTUHL: Looking at Table 1, so permits used, I assume that means designated hunter permits used, 51 in 11(6, 55. Then they have taken 137 deer, those 51 permits, and then the year before 55 permits and 101 deer. So for 16 that's 2.5 deer and then the year before it was two deer per permit average. If I'm reading this wrong or doing my math wrong, please somebody correct me. So it doesn't look like whoever these hunters are taking 100 deer it doesn't seem to be reflected in the table. However, being able to hunt for five permits — I'm a designated hunter. I do it every year. I don't do it for five people, but I think it is a great program and love to share deer. So this five doesn't seem to limit what we're seeing on that table, so it wouldn't affect — I mean I'm not sure how many people it's really going to affect. Anecdotally it's going to affect some people according to what we heart, but the table doesn't seem like it's going to affect any. CHAIRMAN BANGS: Thank you, Steve. I think that anecdotal would happen anyway regardless of whether we adopt this because it sounds like it was an illegal harvest and they're going to do that regardless		
3 between 4 that tit is 5 troope 6 6 7 8 either. 9 10 10 11 definition 12 anythii 12 anythii 15 16 16 17 Chairm 19 design 22 away 12 22 away 12 25 comin, 12 25 comin, 12 26 isn't nc 22 away 12 26 isn't nc 22 away 13 has be 33 much 13 33 much 13 33 much 13 33 much 13 44 to compe 44 5 to hard 44 to compe 44 5 to hard 44 to compe 44 5 to hard 44 limits	MR. YEAGER: At the time, and I'm not recent certain of this, but I think we were in en troopers. I believe our current trooper at me had already left and we were without a rat that time. We did not have a Forest Service LEO CHAIRMAN BANGS: Thank you. So it ely sounds like an enforcement problem more than ng. Any other comments or questions. Don. MR. HERNANDEZ: Thank you, Mr. man. I'm tending towards supporting this sal. In the past we've had proposals on ateed hunting come before us. I've been opposed of those proposals. I believe it dealt with ally curtailing designated hunting and doing with designated hunting. At this point the proposals keep g, we keep hearing the stories of abuse, which eccessarily what's driving my decision to support ut I see this as this most recent proposal as ly being something that is a reasonable ion to be placed on the designated hunter unity. In this area, Unit 3 in particular, there en an ongoing conservation concern with the deer attoin. It is a very limited hunting opportunity less than we see in other units. I think the situation with the ated hunter opposition is more of a situation of tition and we've dealt with a proposal at the ing of the meeting in Unit 2, which is ally dealing with competition between tence and non-subsistence users. In this case it's competition within besistence community, but it's kind of a tition between those that have a limited ability vest and these shortened seasons with small bag against their own neighbors that have the withat to go out and hunt almost continuously and	Page	285	1 2 3 3 4 5 6 6 7 8 8 9 9 10 11 12 13 14 15 16 17 18 19 20 21 22 33 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 36 37 38 36 37 38 36 37 44 45 46 47	of how many they're legally able to get permits for. So I'm not sure if this is going to do any good either way. Like you say, it's not reflected in the table that this is going to really affect anyone if we reduce the number of permits and the illegal activity could still go on. Any other comments. Steve. MR. REIFENSTUHL: Well, I'd only say one other thing. People that don't proxy hunt there's illegal activities there. I mean if we're going to shut things down because one or two or a handful of people do illegal activities, we wouldn't be issuing permits for anything. CHAIRMAN BANGS: Thank you. Mr. Schroeder. MR. SCHROEDER: I'm overall a little bit quiet because I'd really like to defer to someone from the community who has heard about problems. On the other hand, I'll note that I consider the Designated Hunter Program along with the ceremonial use permits that Federal program established to be really, really good moves. I had the opportunity to do hunter surveys when I was working on subsistence issues. Before we had designated hunter program we got really lousy reporting because in many communities in Southeast there were community hunters. These would be people who'd be both really skilled at hunting and they'd be supplying a lot of people with deer. So that was a community pattern and it seemed like a really long-lasting one. The subsistence data overall for communities showed that there'd be high-harvesting households that really contributed a major amount of the food that a community would take. So there were two things there. One was the designated hunter program recognized existing cultural patterns and then it also kind of brought these hunters in from the cold	Page	287

	Page	288			Page	290
Fish and Game saying that they got 15 deer when the limit was four. So I think we also improved our general compliance and we made it possible for people to do things. I guess without hearing more justification I'm not inclined to support this proposal. Thank you. CHAIRMAN BANGS: Thank you, Mr. Schroeder. Any other comments. Patty. MS. PHILLIPS: Thank you, Mr. Chair. The Unit 3 portion of it I definitely would not support because that includes the Kake area. In Native			1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21	With the way that this analysis looks and the numbers aren't there, I have a hard time believing that they were legit and they were obtaining the permits, so it was illegal. Like I say, I think they would probably do that anyway. So I'm not in favor of restricting designated hunters, but I am in favor of enforcing the regulations and documenting illegal activity and reporting it. I would think that the town of Wrangell there would be some peer pressure on those people that you'd think would help and stop that kind of activity. I know if somebody did that in Petersburg I think there would be some scrutiny and some pressure put on by the local citizens. So I'm not sure what to believe, but I think that abuse will happen regardless of what we do with this proposal. Mike.		- 0
villages you always have hunters that are harvesting for other families and that havest can be significant. Maybe not exceed the two harvest allowable. If there's an enforcement issue, then the Wrangell Fish and Game Advisory Committee has seen it themselves, then I think they should be documenting it and turning it in to enforcement regardless of whether you have a State Trooper in your community or not. In my community that's what we're doing. We're getting on the phone and we're calling up State Troopers. It doesn't mean anything is going to come of it, but at least we're doing something to bring attention to it. I'm not saying that Wrangell doesn't do that. At some point in time it's either a management decision or it's an enforcement action. To me it's an enforcement action. Thank you, Mr. Chair.			22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41	MR. DOUVILLE: Well, the numbers alone it does not seem to be a conservation concern. I didn't hear anybody say that. The data here is supported by the analysis. The recommendation would be detrimental to subsistence users that do use the system properly. I think if it passed it would unnecessarily restrict them. As far as other users, I don't think it would have any effect. CHAIRMAN BANGS: Thank you, Mike. Anyone else. (No comments) MS. NEEDHAM: Question. CHAIRMAN BANGS: The question has been called for by Member Needham.		
CHAIRMAN BANGS: Thank you, Patty. I would agree. Mr. Sensmeier. MR. SENSMEIER: Thank you, Mr.			43 44 45 46 47 48 49	Better do a roll call, please, Mr. Secretary. MR. KITKA: Thank you, Mr. Chairman. Robert Schroeder.		
Chairman. I'm in agreement with Patty and Bob. This is real important. In the community of Yakutat you go	Page	289	1 2	MR. SCHROEDER: I don't support. Nay.	Page	291
out and you get a moose or you get deer and you share it with the elders and with those that are not able to go out and with single parents and with the senior lunch program and things like that. I don't see very many people nowadays that don't have a phone in their hand. If you look down and there's a boat with 14 deer and they're jumping in another boat to go get some more, I would think that you would take a picture of that and it would be an enforcement issue. CHAIRMAN BANGS: Thank you, Ray. Donald. MR. HERNANDEZ: In regards to the enforcement issue I guess the impression I'm getting is that these people were not violating, that they were essentially within the law by using the designated hunter permits in their possession to be able to take this many deer and it was just kind of offensive to people that they were able to take so many but yet not necessarily take proper care of them. CHAIRMAN BANGS: Thank you, Mr. Chair. But the proponent says that one person is taking upwards of 40 to 50, so you're not seeing it in the system anywhere, so you know they're doing it illegal. They're not using the system. So that's something to consider. CHAIRMAN BANGS: Yes. I think that the intent of this program is very important to communities such as Patty referred to, Kake and different villages, that really do rely on village hunters. I think I would not want to put any restrictions. I thought of different ways we could			3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 33 34 35 36 37 38 39 40 40 40 40 40 40 40 40 40 40 40 40 40	MR. MR. SCHROEDER: Mr. Chairman. I'd just like the Council to acknowledge Harold Martin, who has been sitting in our meeting on and off yesterday and today. Harold was a former member of the Council quite a few years ago and he's spent many, many years working on the subsistence issue with Tlingit-Haida and with the Organized Village of Kake and has been responsible for many cooperative data gathering projects. So I'd just like to welcome you on behalf of the Council, Harold. MR. MARTIN: Thank you. MR. SCHROEDER: And Harold is also a T'akdeintaan brother of mine. Thank you, Mr. Schroeder. Mr. Sensmeier. Mr. Sensmeier. Mr. Sensmeier. And Harold is also a T'akdeintaan brother of mine. Thank you, Mr. Schroeder. Mr. Sensmeier. Harold is also a T'akdeintaan brother of mine. Thank you, Mr. Schroeder. Mr. Sensmeier. Harold is the bonor and privilege of serving with him on the University of Alaska, Alaska Native Science Commission and with the Alaska Native Harbor Seal for years. He finally retired from that board and we hired him as a consultant. We wouldn't let him get away. It's a real honor to have him present. Thank you. CHAIRMAN BANGS: Thank you, Ray. Mr. Kitka. MR. KITKA: Thank you, Mr. Chair. I'd like to acknowledge Harold too. I'm not too sure whether it turned out good for me or not because I sit in his place. I was appointed after he retired. But, Harold, I had dealings with him and worked with him a lot of times. Him and I were both part of the Halibut Subsistence which is being brought up on this thing every now and then. He got the first ticket for halibut subsistence, so he's number one in our books.			Terry Suminski with the Forest Service. Proposal WPI8-10, requests that the Federal season for moose in Unit 5A, except Nunatak Bench east of the Dangerous River, be open from September 1 to November 15, with Federal public lands closed to the harvest of moose except by residents of Unit 5A from September 1 through September 14. This was submitted by the Yakutat Fish and Game Advisory Committee. Susan Oehlers is on the phone as the analyst. MS. OEHLERS: Good afternoon again. Can you hear me okay this time? CHAIRMAN BANGS: Yeah, loud and clear. MS. OEHLERS: Okay. Sorry about that. I'm not sure what happened there. Good afternoon, Mr. Chair. Council Members. This is Susan Oehlers with the Forest Service in Yakutat. Terry has already read the proposal twice. I will not re-read that for the record. The proposal starts with the executive summary on Page 223 and the analysis starts on Page 225. This proposal, as stated, was submitted by the Fish and Game Advisory Committee with the rationale that opening up the east side of the Dangerous River earlier, access will be improved for subsistence users, meaning longer days, potentially better weather conditions, and greater availability of local air taxi, which would allow additional opportunities and potentially reduce the hunting pressure during the opening days of the subsistence season on the west side. Implementation of this request would effectively open the Federal season for moose in a portentially reduce the hunting pressure during the opening days of the subsistence season on the west side. So I'm just going to give a little brief background on population and harvest and then I'll move into the conclusion and harvest and then I'll move into the conclusion and harvest and then I'll move into the conclusion and the justification, which will include the effects of the proposal.

Okay. The next proposal is WP18-10, modifying seasons for moose in Unit 5A the east side of Dangerous River. Terry. MR. SUMINSKI: Good aftermoon, Mr. Chairman. Proposal WP18-10, requests that the Federal season for moose in Unit 5A, except Nunatak Bench east of the Dangerous River, be open from September 1 to November 15, with Federal public lands closed to the harvest of moose except by residents of Unit 5A from September 1 through September 14. This was submitted by the Yakutat Fish and Game Advisory Committee. Susan Oehlers is the analyst on this proposal. Thank you. CHAIRMAN BANGS: Are you online, Susan? (No response) CHAIRMAN BANGS: Terry. MR. SUMINSKI: Mr. Chairman. I think it would be best if I can get Susan. Maybe we could go to the next proposal because she really has a lot of local knowledge about how this proposal was developed and how she worked with the community on it. CHAIRMAN BANGS: Patty. MS. PHILLIPS: Can we take a five-minute at ease? CHAIRMAN BANGS: Sure. That's a good idea. Do you think you could give her a call and get in touch with her? MR. SUMINSKI: Sure. Thank you. CHAIRMAN BANGS: Okay, great. Thanks. (Off record) (On record) CHAIRMAN BANGS: Okay. Terry, would you like to start over.			Again, real briefly, currently the moose population in Unit 5A appears to be healthy. We've seen improved bull/cow ratios in recent years as well as healthy recruitment and this is all likely as a result of recent mild winters throughout Southeast Alaska. Regarding harvest as shown in Table 2, from 2012 to 2016 an average of 15 moose were harvested annually east of the Dangerous River and 27 west of the Dangerous River, meeting or exceeding the quota of 25 on the west side and resulting in early season closures, but not reaching the quota of 30 moose on the east side. During that same time period 2012 to 2016 subsistence users accounted for an average of 96 percent of the harvest west of the Dangerous River and 52 percent east of the Dangerous River. The OSM preliminary conclusion is to support this proposal with the following justification: Currently, the area in Unit 5A west of the Dangerous River rapid harvest and multiple animals taken out of localized areas. The area east of the Dangerous River is less accessible than the west side, including minimal to no local air tax service after September, and receives less hunting pressure during minimal to no local air tax service after September, and receives less hunting pressure. Opening the Federal season on the east side of the Dangerous River and receives less hunting pressure. Since the harvest is managed on a quota which is set annually, there would be minimal feffects to the overall moose population. A season opening in September is consistent with other seasons in Southcentral Alaska. Given limited access, a currently healthy moose population, and a limited quota, effects to the overall moose population and a limited quota, effects to reproduction are expected to be minimal. Consequently, there are not expected to be any conservation concerns as a result of adoption of the proposal.	

	Page	296		Page	298
requesting that the State season open on September 8 on the east side of the Dangerous River. Consequently, if both proposals are passed, there would be no negative impacts to State users and it would also provide them additional opportunities, including the availability of local air taxi service. That concludes my presentation and I welcome any questions or comments. Thank you. CHAIRMAN BANGS: Thank you, Ms. Oehlers. Any questions from the Council. Ray. MR. SENSMEIER: Thank you, Mr. Chairman. There is a concern locally as to a five-week earlier opening. That area is only accessible by airplane. Locally, it's cost prohibitive to fly down there. If this was implemented, the last part of the paragraph reads: If, however, this proposal is passed and a parallel extension is not implemented under State regulations, subsistence users will enjoy an earlier season opening whereas the State season will remain the same; consequently, fewer moose may be available to State users. You're looking at a reduction. I know the guides would benefit from this because they have airplanes and able to take people into that area five weeks earlier than normal. If they did not institute a parallel agreement for the State, that could reduce the number of aircraft during that time period. MS. OEHLERS: I'm not sure if there's a question there. I agree with the statements. Sorry. Through the Chair, Mr. Sensmeier. So, yeah, this would be implemented first and then it would go through the State Board of Game for the State, season. I don't know if that helps explain, but I think what you're saying is correct.	raye	270	discuss that in deliberations as we questions. Patty. MS. PHILLIPS: Thank Bangs. Ms. Oehlers, is there a pet the harvest quota in the first two v proposal? MS. OEHLERS: Thron Phillips. I would say that's a poss at this point the harvest has gone east side, but that's this time of ye limited access. You know, that we would have to guess at. I would? That's kind of difficult many people would really take ac opportunity, but you're still lookin less than on the west side of the generally going to need a plane or most of the area. So I think it would necessal as sit of the degree also still the height of fishing seas my understanding is that people would take advantage of this earlied on the the color of the area. So I think it would necessal sit of the degree aren't going to really get to October anyway. So I think that's situation, but I think ther's would the advantage of this earlied on't think ther would I would take advantage of this earlied of the characteristics.	eer season opens sent those concerns the last few days. Thank you, Ray. We can ell. Any other Tyou, Chairman tential of taking all weeks of this ugh the Chair. Ms. ibility. leave time for the local fish and game advisory to submit a proposal pertaining to the State and season,			48 49 Patty, follow up. 50		
	Page	297		Page	299
is that right? MS. OEHLERS: Yes. Through the Chair. That's correct and that is their intent to submit a similar proposal. So there would still be essentially a two-week priority for subsistence users. It's just everything would gets hifted up earlier. MR. SENSMEIER: And that the season would open five weeks earlier. The prime bulls are the ones that enter the rut first, so there's a concern that there might be a trophy hunt because they're older and prime. Case in point, about 12 years ago or so on the Manby side where the Wrangell-St. Elias Park and Preserve are located our people go over there. It's the only place in the Park where you can land an airplane because of the treacherous waters between Yakutat and the Manby shore and we're well aware of that. I lost my son-in-law over there about four years ago. He capsized. My aunt and uncle and another uncle lost their lives there. But going over there at that time there were seven moose that were encountered with only the antlers taken. They weren't even gutted or anything. So that's a concern that this might occur on the Yakutat Forelands because of the prime bull at that time. MS. OEHLERS: Through the Chair. Council Member Sensmeier. I understand the concern. I guess what I would say to that is there would be the option for the Council to discuss if they wanted to move the season up earlier but perhaps less than five weeks. I mean that would be something that you could entertain as well. I'm just throwing that out there for consideration.			MS. PHILLIPS: Thank MS. Ochlers, on Page 232, that m August to October, coinciding wit and that the rutting bulls are more that the cast of the Dangerous makes to the east of the Dangerous makes to the east of the Dangerous makes to the cast of the Dangerous makes to the council Member Phillips. I agree. Statement. So, yeah, we might see rate, but again I think the effort — some increased effort, but it's por minimal. And I would point out to seasons — you know, the next stat ranalysis talks about it's a pretty c throughout Alaska. So this is kin management practice. CHAIRMAN BANGS Ray. MR. SENSMEIER: T That's what I alluded to a minute a concern that those prime wolves would be targeted for trophy reas would be targeted for trophy reas composed to this I was told just bel popose Harold Robbins. Bob Mil Robbins is a guide. Gary Gray is opposed to this I was told just bel Thank you. CHAIRMAN BANGS CHAIRMAN BANGS CHAIRMAN BANGS CHAIRMAN BANGS	uin paragraph says. rived congregating from h the rutting season vulnerable to un earlier hunt on hem more vulnerable to ugh the Chair. That's a true some higher harvest there would be bably going to be that a number of ements within the ommon season d of a standard Thank you, Susan. Thank you, Patty. ago and that there's with the large racks some sepecially when get those. I he past with seven down there that er has an aircraft. a guide. And they're	

Page 300 Page 302 MS. OEHLERS: Through the Chair. Mr MS. SELL: Thank you, Mr. Chair MS. SELL: Transk you, Mr. Chair. Council Members. For the record, my name is Stephanie Sell. I'm the area wildlife management biologist for Northem Southeast Alaska. I manage GMU IC, ID and 5. I'm here with Ryan. You guys know him. Schroeder. That's correct MR. SCHROEDER: At least in Table 2 MR. SCHROEDER: At least in Table 2, really that quota hasn't been taken, at least from 2012 to 2016 and probably not this year either. What does that do to the population structure of moose in this area. I'm not sure if Table 1 – Easter Forelands, is that the same as the east of the Dangerous? I think Susan covered a lot of the summary that we have as well. This proposal liberalizes the Federal moose hunting season on the east side of the Dangerous River in Unit 5A by adding an additional five weeks to the beginning of the season. 11 12 13 14 MS. OEHLERS: That's correct 12 13 14 MR. SCHROEDER: So if you kind of look at Table 1, it looks like we've got a whole bunch of bulls in the east. Is there a surplus of bulls in the This hunt is managed under a joint State/Federal permit that was established in 2004. Currently hunting by non-Yakutat residents is prohibited on Federal lands between October 8th through the 21st. So essentially there's a little bit of confusion with State hunters seeing our season starts October 15th because all the lands generally up there are Federal lands that technically State season can't start until October 22nd. 15 16 17 15 16 east or can you comment on the population structure and productivity? 18 19 20 MS. OEHLERS: Sure. Through the Chair. Mr. Schroeder. Yeah, that's a good question. Yeah, we have not reached the quota on the east side in recent years for most of the time that the season has been in effect. I think that, generally speaking, there is 20 21 22 23 24 25 23 24 25 26 27 28 29 30 31 In 2012 there were Sealaska lands known higher harvest on the west side, so we've seen a lower as the nine townships that were close to town and that previously dispersed the harvest a little bit. It was managed by the State and pushed some of the harvest away from town and off the road system. cow/bull ratio. 26 27 Mostly there's less effort on the east side. I think there are additional animals that could be taken. We set the quota, so that's kind of a safety measure. Maybe more animals would be harvested early on, but we would close the season if we get to that 28 29 30 31 However, in 2012 that reverted back to Federal management, which opened up additional hunting opportunity close to town for Yakutat residents under this Federal regulation and increased the harvest significantly as Ms. Oehlers mentioned. 32 33 34 35 36 37 33 34 35 36 37 If you're talking about population structure, we don't have any hard data showing improvement from east or west of the Dangerous, but presumably there is some movement from the eastern This opened up really prime moose habitat. This is areas around Ten Mile Meadow, Situk presumably there is some movement from the eastern forelands to think currently the population would be able to withstand some additional hunting pressure. That quota is something that we set annually. Even if we extended the season if we got into situations, some hard winters that we thought we couldn't support a harvest of 30 bulls, we can change that quota. Again, we set that every year. area and it actually concentrated some of the harvest into those areas because the habitat is so good. 38 39 40 41 42 38 39 40 41 42 Federal regulations allowed designated hunters to hunt moose for multiple people and there are few efficient hunting parties who are able to take multiple moose which account for a majority of the quota on the west side of the Dangerous and we've heard 43 44 43 44 45 46 47 45 46 47 48 some concerns from some people that some of those parties are getting all the moose in the quota and not allowing opportunity for other families. Does that answer your question? MR. SCHROEDER: Yes. I won't get too much into the biology. We've discussed the Board of 48 49 50 Page 301 Page 303 Both the State and Federal Staff, Ms. Oehlers and myself, we try to attempt to closely monitor this population and the harvest to make sure it stays within the quota on the west side of the Dangerous, which has typically been between 25 bulls, but hunters often fail to report their harvest in a timely fashion, so it's very difficult for us to kind of track that in real time. Game schedule with respect to a wolf proposal that we just dealt with earlier and the Board of Game is meeting such that — let's see if I've got it right now. The Board of Game is meeting January 19 and so the earliest possible effect for a Board of Game change would be the 2019 hunting season. Did you note in the analysis if the Federal Board passed this proposal as written, this would essentially close the area east of the Dangerous for the 2018 season. Do you have any comment on that? As an example, this season we increased our quota because the bull and cow ratios were really good to 30 on the west side of the Dangerous. We ended up closing the season when we knew about 23 and then we ended up with 35 to 36 moose harvested when we closed it the following day. So there was a lot of moose that 12 MS. OEHLERS: Through the Chair. Council Member Schroeder. I see what you're saying. If this were passed by the Subsistence Board, this would 13 14 15 16 17 14 15 16 17 go into effect next season, but there would be — if I understand it in the way you stated it, if that's correct, a similar change for the State would not go into effect until the previous year. we didn't know about at that time. Reported harvest exceeded the annual 18 Reported harvest exceeded the annual quota in regulatory years 2014-2016 including this past season. Even thought we try to manage the moose hunt as best we can, it usually closes within three to four days at the beginning of the Federal season, so we don't even get to a State season. We close it before it starts on the west side of the Dangerous. So you're right, there would be one year where the Federal season is moved up earlier without a concurrent change in the State. That doesn't necessarily mean it would preclude a State season. But you're right, there would be a lag. 23 23 24 25 26 27 28 29 24 25 26 27 During those same years the east side of the Dangerous River has remained open for the entire State and Federal season. So if it's underutilized and we're not meeting our quota on that side. Regulatory years 2012-2016 we harvested an average of 44 bulls in Unit 5A, but off we harvested an average of 44 bulls in Unit 5A, but off we harvested an average of 44 bulls in Unit 5A, but off we harvested an average of 44 bulls in Unit 5A, but off we harvested an average of 44 bulls in Unit 5A, but off we have self-side so that kind of gives Does that answer your question? 28 And I did not speak to that in the proposal, but that's a good observation. 29 30 31 32 30 31 32 CHAIRMAN BANGS: Thank you. Any other 33 34 33 questions for Ms. Oehlers you an idea that we're underutilizing opportunity on that side. 34 35 36 37 38 39 40 (No comments) 35 36 37 38 39 40 The Department does not identify any conservation concerns for moose in Unit 5A. Aerial CHAIRMAN BANGS: Seeing none. Thank conservation concerns for moose in Unit 2A. Aerial surveys indicate that the moose population on the east side of the Dangerous is doing well. It has really good bull/cow ratios. The percentage of calves observed during surveys were similar in 2015 and '16, indicating positive recruitment. you again, Ms. Oehlers and Mr. Suminski. MR. SUMINSKI: Thank you, Mr. Chair. 41 42 43 44 45 CHAIRMAN BANGS: Is there any reports from consultations from tribes or ANCSA corporations? 42 43 44 45 46 Opening the hunting season on the east side of the Dangerous River will potentially disperse some of the harvest pressure away from some of the areas on the west side of the Dangerous that are easily assessable because they're located off the road system and potentially because those air charter services will (No comments) 46 47 48 49 50 CHAIRMAN BANGS: None. Agency comments from Alaska Department of Fish and Game. 47 48 49 50

Page 308 Page 310 the use of aircraft, which would cost thousands of MR. SENSMEIER: Yes. With respect to MR. SENSMEIER: Yes. With respect to what Patty said. Yeah, you do hang the mose. We all know now with climate change and global warming that the temperatures in September they're extremely high, up into the 80s and sometimes even to 90. My son came home with a moose last fall and we hung it in the smokehouse and that was in October because it had cooled down and hung it for 11 days. Early on in September I don't believe that you would be able to hang a moose that far and salvage very much of the meat. dollars, especially if you did get a moose, to get it out and I don't see anyone locally benefitting from that. The fishing season this year went into October, so nobody is going to quit fishing to go moose hunting. Being that it is only accessible by air, it would not really benefit any of the local users. I don't always agree with Harold Robbins, but this time I do. He's opposed to opening it. And Bob Miller, a pilot, and Gary Gray is also a bear guide down there. As it stands now, I cannot 11 12 13 14 11 12 13 14 Thank you. support this. 15 16 17 15 16 17 ACTING CHAIR NEEDHAM: Mr. Schroeder. Thank you. MR. SCHROEDER: I have one other comment and that is that the resource in the proposed area has not been fully utilized. We have a quota of 30 moose and as the data shows approximately an average of 15 moose have been taken and the quota has never been met. That's sort of a sign that if we want to provide subsistence opportunity that some change is warranted. So Id supnort a change that would promote subsistence ACTING CHAIR NEEDHAM: Thank you, Mr. 18 19 20 Sensmeier. Are there any other discussion from other Council Members. 20 21 22 Ms. Phillips 21 MS. PHILLIPS: Thank you, Vice Chair Needham. I will be voting no on this proposal. My reasons are slightly different though I do support Mr. Sensmeier's community perspective that he heard from his Yakutat residents, their concerns, that it wouldn't really address their – well, it would give additional opportunity for Yakutat residents, but I think if you were fishing on a setnet site on one of the rivers and your season goes until October and you have to live the rest of the year on that fishing income, you're not going to stop fishing to hunt a moose. 23 24 25 23 24 25 So I'd support a change that would promote subsistence 26 27 26 27 ACTING CHAIR NEEDHAM: Thank you, Mr. 28 29 30 31 28 29 30 31 Mr. Hernandez and then Ms. Phillips. MR. HERNANDEZ: Thank you, Cathy. My initial thoughts on this proposal were that it was an excellent proposal to support. It was proposed by local subsistence users. It kind of solved a problem 32 32 33 34 35 36 37 33 34 35 36 37 Also my area, Lisianski Inlet, has traditionally had setnet permits for the Yakutat area and still do have setnet permits that fish the Alsek. They are rural residents of Alaska in Southeast Alaska and they have to wait until Yakutat has their hunt. They currently are getting moose now. where moose were going unutilized and it also provided for an early season for the subsistence users which would be a priority use for subsistence, but now I'm hearing from some of the Council Members that they don't necessarily think that that's the way it would 38 39 40 41 38 39 40 41 42 all come out in the end. 42 So if that entire quota for the east of I want a little more clarity here as to why that is and what I'm hearing essentially is that they don't believe that the local Yakutat residents would be the ones to benefit from this because they're still kind of engaged in fishing and not really hunting yet. And you believe that the increased availability would tend to more be taken by non-subsistence users the Dangerous is caught, then they don't have that opportunity and yet they're Federally qualified rural residents. Maybe they don't have the C&T for the 43 44 43 44 45 46 47 45 46 47 48 Yakutat area, but they're on that river. So I'm kind of looking out for them because it's been a traditional practice for — I don't know. 48 Page 309 Page 311 I've been in Pelican since '72 and there were people – I mean Byron Mallott used to bring salmon from Dry Bay down to Pelican Cold Storage on a tender. So it's been going on for a long time. So I'm Is that kind of the gist of it here. ACTING CHAIR NEEDHAM: Mr. Sensmeier. looking at a different perspective than the rest of you would be looking at. And then with the rutting bulls in early August to October, you have those bulls vulnerable to harvest early on when these other guys can't even get on them yet or harvesters don't want to MR. SENSMEIER: Yes, that's true. 1 don't know of any local users that would be able to spend the thousands of dollars it would take to hire an air taxi and in the event you did get a moose be able to haul that all out, which is an additional cost as ACTING CHAIR NEEDHAM: Ms. Phillips. One thing that I do on harvesting deer in my area is I wait for the temperatures to chill down so that when I hang a deer it can age. I don't know if that's what they do with moose because I don't get 12 12 then Mr. Reifenstuhl 13 14 15 16 17 18 13 MS. PHILLIPS: Thank you Vice Chair Needham. Well, maybe if we moved the date a little. Instead of this September 1st proposed date to September 20th and then the State season two weeks 14 15 16 17 18 moose, but I would want the temperatures to chill down before I go get a moose. 19 20 21 22 So that's why I would vote no. My concern, Mr. Hernandez, isn't that. My concern is that Yakutat residents will get it all Thank you. and those other rural residents who are not Yakutat ACTING CHAIR NEEDHAM: Thank you, Ms. Phillips. Other discussion by Council Members. residents won't get what they've customary and traditionally have harvested. 23 23 24 25 26 27 24 25 26 27 28 Thank you. MR. SCHROEDER: This happens to be one area that I am familiar with because Ive gone up there hunting a couple times. I want the Council to be aware of the sequencing problem of getting the Board of Game to line up with any new Federal proposal that we put forth particularly because the Board of Game cycle would not be able to act on this until taking effect in the 2019 essential. ACTING CHAIR NEEDHAM: Thank you. 28 29 29 30 31 32 MR. REIFENSTUHL: Yes. If Susan is still on, I'd like to know how many people are on the Yakutat Advisory. They had to be public hearings. That would be helpful to understand how many people were represented there. 33 34 33 34 35 36 37 38 39 40 35 36 37 38 39 40 So if we pass this with no provisos that would have a Federal subsistence season in east of the Dangerous from September 1 until November 15 with non-subsistence qualified hunters only able to hunt on the State season, which is October 8th. If that's our intention, we should just be aware of that. MS. OEHLERS: Sure, through the Chair. Council Member Reifenstuhl. I'm not sure the total numbers and I don't know if they have it at the tip of their fingers. I don't know if the State would have those numbers handy. 41 42 43 44 ACTING CHAIR NEEDHAM: Does the State An alternative would be to suggest 45 46 defer implementation. 45 have those numbers potentially? 46 MR. SCOTT: Chairman Needham, we don't have the exact numbers, but anywhere from seven, eight, nine individual around the AC. 47 48 49 50 47 48 49 50 ACTING CHAIR NEEDHAM: Mr. Sensmeier.

		Page	312			Page	314

		Page	316			Page	318
1	MS. PHILLIPS: Thank you, Vice Chair			1	what to do with this.		
3	Needham. So the season will be September 15th through November 15th and 5A except Nunatak Bench east of the			3	I can't grasp it either, Mike.		
5	Dangerous River, one bull by joint State/Federal registration permit only. From September 16th through			5	Thank you.		
6 7	September 30th Federal public lands are closed to the taking of moose except by residents of Unit 5A hunting			6 7	ACTING CHAIR NEEDHAM: Mr. Sensmeier.		
8 9 10 11 1 1 2 1 3 1 1 4 1 1 1 6 1 7 7 1 8 1 9 1 1 1 2 2 1 2 2 2 2 4 2 2 5 6 2 7 7 2 8 9 3 0 1 3 2 2 3 3 3 4 3 3 5 5 3 6 6 4 1 4 2 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4 4	acting of hisses except by residents of that Ar mining under these regulations. ACTING CHAIR NEEDHAM: Currently there's an amendment on the floor that was stated by Ms. Phillips to change the dates from September 16th to September 30th and the question has been called on that amendment, which was previously an amendment that we put on the floor prior to Mr. Hernandez's recommendation to change that language to include the rest of the regulation. So supporting the amendment would not include the proposed Federal regulation that was on top previous to that and opposing that would then allow somebody to make a motion to amend the main proposal with clearer language to include what was forgotten. Mr. Bangs. MR. BANGS: To make this speed up a little bit, I think we should just, if we want to do that, let's just vote down what's called the question for and restate another amendment and carry on if that's okay with Ms. PhilLips: Sure. ACTING CHAIR NEEDHAM: All right. Those in favor of the amendment signify by saying aye. MS. PHILLIPS: Aye. ACTING CHAIR NEEDHAM: Those opposed nay. IN UNISON: Nay. ACTING CHAIR NEEDHAM: The nays have it. Is the wish of the Council to ofter another amendment to the main motion. Mr. Schroeder.			8 9 10 11 12 13 14 4 15 16 17 7 18 19 20 21 22 3 24 25 26 27 28 29 30 31 32 33 34 35 36 36 37 38 39 40 41 42 44 44 44 44 44 44 44 44 44 44 44 44	MR. SENSMEIER: I'd like to thank Mr. Douville. I've known Sam all my life. We grew up together. The people that we had a meeting with at the senior center are also of our generation and they made known their opposition at that time along with others who called me last night and this morning in addition to Harold Robbins, Bob Miller and Gary Gray. We, along with Sam, don't see that it would benefit local subsistence users to open up the eastern section of the Dangerous. Thank you. ACTING CHAIR NEEDHAM: Thank you, Mr. Sensmeier. We have an amendment on the floor. Is there any discussion with respect to the amendment. (No comments) MR. BANGS: Question. ACTING CHAIR NEEDHAM: The question has been called for the amendment to the main motion where the amendment would now read — or it would now change the — please, Mr. Schroeder. MR. SCHROEDER: The amendment would change the season opening from the requested September 1 to November 15th to Starting September 16th to November 16th. Secondly, it would change the closure period for Federal public lands from September 1 to September 14th to September 1 6th to September 1 to September 14th to September 1 6th to September 1 to September 14th vo September 1 6th to the main motion signify by saying aye. IN UNISON: Aye. CHAIRMAN BANGS: All opposed.		
49 50	Mr. Schroeder.			49 50	Снажмам вамоз: Ан оррозеа.		
		Page	317			Page	319
1 2	MR. SCHROEDER: I'll do a try this time. I wish to amend the main motion to set the			1 2	(No opposing votes)		
3 4 5 6 7 8	season open date from September I to November 15th to September 16 to November 15. The other change is to change the closure of Federal public lands from September 1 to September 14th to September 16 through September 30th. So Federal lands would be closed from September 16th to September 30th. I think that's what			3 4 5 6 7 8	ACTING CHAIR NEEDHAM: All right. The amendment passes. Now we're back to the main motion to support WP18-10 as amended. Mr. Hernandez.		
9 10	we were attempting to do.			9 10	MR. HERNANDEZ: Thank you, Ms. Needham. Is Susan Oehlers still on the line?		
11	MR. HERNANDEZ: Second.			11	MS. OEHLERS: I am on the line.		
13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 30 31 33 34 35 36 37 38 39 40 41 42 43 44	ACTING CHAIR NEEDHAM: It's been moved by Mr. Schroeder and seconded by Mr. Hernandez to amend the main motion. Discussion by the Council. Mr. Douville. MR. DOUVILLE: I took it upon myself to ask one of the residents in Yakutat for his opinion and he's lived there for a long, long time. I'm sure you know Sam. He answered me saying even if it would take pressure off the Ahrnklin River, with the small limit for moose I'm afraid they would shut down west of the Dangerous as the quota combines east and west. If that opens the season early for local subsistence and I would not want to disrupt that, therefore I'm opposed to the early opening east of the Dangerous. I'm having a hard time grasping this whole situation to be honest with you. I do respect those people that live there and what they want to do, so I would defer to them to help me, but I still don't understand clearly what's going on here. Listening to the testimony here it all sounded okay, but listening to Mr. Sensmeier and Sam it's not okay or not quite okay. So I'm having a problem with it. ACTING CHAIR NEEDHAM: Thank you, Mr. Douville. Mr. Bangs.			13 14 15 16 17 18 19 20 21 22 23 24 25 26 27 28 29 30 31 32 33 34 35 36 37 38 39 40 41 42 43 44	MR. HERNANDEZ: This kind of brought up a new question in my mind that needs a little clarification and I think the issue here is that by opening up the season early east of the Dangerous River there could be the potential to take a greater portion of the quota in that area which would limit easier opportunity west of the Dangerous, which is heavily utilized. Does anybody disagree with that, that that's the situation we're dealing with? (No comments) MR. HERNANDEZ: Okay. So in reading the analysis, it's important for me to understand how the quota is set. I think the answer to that is on Page 228 in the middle of the page and is this a relevant paragraph where it says Since 2010, the Yakutat District Ranger has used the delegated authority to establish the moose harvest quota in the fall for Unit 5A except the Nunatak Bench at 55 bulls, with no more than 25 of those bulls to be taken in the area west of the Dangerous River. So I guess my question is should say 40 bulls be taken in that area east of the Dangerous River. So I guess my question is should say 40 bulls be taken in that area east of the Dangerous River. MS. OEHLERS: Through the Chair. Council Member Hernandez, Yes, if I can try and		

Page 320 Page 322 say hit 30, you would probably close it so that you would still have 30 available on the west side as well. necessarily going to affect the quota on the other side. They are set separately MS. SELL: You're asking me questions for something we've never done before and we've never made 30 on the east side of the Dangerous. So hypothetically I believe we would just have to monitor how quickly the harvest is going to try to not go over that quota of 25. That's not to say we would take that away from the west side of the Dangerous at all. That being said, there is an overall quota that we try not to exceed and that kind of gets back to that situation which Ms. Sell described where we try not to go over on either side. That's a little we try not to go over on either stoe. That is a nine bit beside the point. I guess the main point is the quotas are set separately east and west of the Dangerous. So we would be managing for a maximum quota on either side. So what's taken on the east side is in general not going to have an effect on the west side. 11 12 13 14 ACTING CHAIR NEEDHAM: Mr. Scott MR. SCOTT: Through the Chair. Member Hernandez. I guess first off we recognize how important the west side of the area is to the local user groups there. I think some of the confusion comes for us and probably everybody looking into this. As we manage the hunt on the Yakutat Forelands under one permit number, RMO-61, a joint permit issued by the Forest Service as well as the Department. Does that help? 14 15 16 15 MR. HERNANDEZ: Well, that helps because you're kind of contradicting what the concerns are in opposition to this proposal. The way I understand it you're saying -- well, to go on here it says in that same paragraph, no more than 25 bulls to be taken in the area west of the Dangerous River. I mean I don't see any mention of a quota recommendation for east of the Dangerous River. 20 20 21 21 22 So it may be something as simple — and not having thought this out, so all of the comments that have been made are great, but it may be something as simple as just managing them as separate hunts. Establish a quota on the west side, establish a quota on the east side and if we bump up against it — I mean we're going to get the quota on the west side. History tells us that at least for the foreseeable future 23 24 25 23 24 25 So are you saying there would be 25 bulls allowed to be taken west of the Dangerous River regardless of what's taken east of the Dangerous River? 26 27 26 28 29 30 31 MS. OEHLERS: Right. Through the Chair. Mr. Hernandez. In this situation we would be looking to take 25 bulls west of the Dangerous and 30 east of the Dangerous for a total of 55 bulls. that's going to happen. 32 The quota on the east side of the river we haven't gotten there and we see unutilized opportunity there and additional bulls standing around available for harvest and that's our goal. So if that means we need to separate the hunts, I think we could 33 34 35 36 37 33 34 35 36 37 MR. HERNANDEZ: Okay. I think that clarifies it for me Thank you. do that, frankly. Unfortunately I don't know if we can 38 39 40 41 42 38 39 40 41 ACTING CHAIR NEEDHAM: Mr. Douville. MR. DOUVILLE: Okay. Well, Sam is worried about -- he said this is a combined quota and if the east goes over, well then the west would suffer for it, is that correct? We might be able to administratively do that without going through a Board of Game process, but I'm not sure about that. I mean that's kind of the hiccup in my -you know even just establishing a new hunt number, but it is coming. As a management 42 43 44 43 45 46 47 48 45 46 47 48 MS. OEHLERS: Through the Chair. Mr. Douville. That does bring up a good point and I'd also offer if the State has any thoughts on this. You know, we do manage this as a combined quota, but we do as biologist, I don't think it's going to be all that tough, frankly, to manage for the two different hunts on either side of the river. Page 321 Page 323 Federal managers have some discretion on when we decide to close a season. For example this year we did go over on the west side, but since we're managing for the different sides we typically keep those quotas as MS. OEHLERS: Mr. Chair, can I just add one thing. This is Ms. Oehlers. ACTING CHAIR NEEDHAM: Yes, please, independent. Susan. MS. OEHLERS: I'm sorry, Ms. Needham. Ms. Chair. Maybe I didn't make this clear and what Mr. Scott was just alluding to I think, you know, the important point is that, you know, it is a joint quota, but I expect that we would do a similar action as we do on the west side. If we had a quota of 30 or whatever number we set for the east side once we approach that quota, we could go ahead and close that side. Again, I would offer if the State has any thoughts on that since this is managed jointly. We try and keep it within that quota, but we do set it as a target. It's not hard and fast. It's something we try and keep within. Given the current management, we don't always hit that exactly on the nose. So I don't really see this having an effect on the west side overall. 12 12 13 14 15 16 17 18 14 15 16 17 So I'm just getting at the point where what the harvest on the east side is not going to affect in my mind the harvest on the west side. Just like we do on the west side every year the District Ranger has a delegated authority, he sets the quota. When we get to the point where we're getting close to the transperse and the desired and the state of the set of the point where we're getting close to the care and the state was to a set of the set of th ACTING CHAIR NEEDHAM: Do you have a follow up? Mr. Hemandez has a follow up. 18 MR. HERNANDEZ: I see the State is huddling over there in the audience. I just wonder if they agree with this interpretation or not. I'd like 19 20 21 22 to hear from them as well. that quota we close the season and that's what we've been doing on the west side. 23 23 24 25 26 27 28 ACTING CHAIR NEEDHAM: Ms. Sell and Mr. 24 25 26 27 It hasn't been an issue on the east side, but if this proposal is passed and we do have a MS. SELL: I don't know if we're going higher harvest and we reach that quota, we could go ahead and close it, so that would not affect the to muddy this more or not. 28 29 29 harvest opportunities on the west side. 30 31 32 ACTING CHAIR NEEDHAM: Yes, please. I hope that clarifies it somewhat. And I hope I didn't misspeak on that if the State has any additional thoughts. Whether or not it's officially managed as different hunts, as Mr. Scott was alluding to, we do have the ability to close either side of the MR. HERNANDEZ: So my question to you which I did not ask Susan, but it kind of would further clarify it to me, if 25 bulls were taken early east of the Dangerous River, would you close that season to anymore take? 33 34 33 34 35 36 37 38 39 40 35 36 37 38 39 Dangerous. MS. SELL: That's a good question. So if we took 25 bulls on the east side of the Dangerous, as Susan was mentioning we have a combined total harvest quota that we don't usually want to go over, which is usually 55, I don't think that we would close it at 25 unless we were confident that we could hit the 40 worke, which is usually our wards or the act. ACTING CHAIR NEEDHAM: Thank you. 40 Mr. Sensmeier, Mr. Howard, Mr Douville, then Ms. Phillips. MR. SENSMEIER: I'm getting tired. I just heard someone say that there's bulls that are just standing around and not being hunted. I have a hard time looking at that. That's no bull. that 30 mark, which is usually our quota on the east 45 46 side of the Dangerous 45 46 47 48 49 50 47 48 49 50 Does that answer your question? (Laughter) MR. HERNANDEZ: So you're saying if it

Page 324 Page 326 MR. SENSMEIER: I understand Sam's proponent wants to resubmit for an earlier date, we can concern. If there's additional hunting on the eastern side and the quota is reached over there, it won't be re-analyze it and see how it's been affected, but to do it cautiously. side and the quota is reached over there, it won't be because it's being utilized by local subsistence users. It will be utilized by those who can access it by aircraft, which is the only means that you can access that area and we don't have that kind of money or pilots to participate in that. So I share his concern. We need those moose on the west side. ACTING CHAIR NEEDHAM: Thank you, Ms. Phillips. Mr. Bangs There is an advisory meeting at home on the 14th of this month where they will be taking up fish proposals. I'm wondering if this might be something they can take up again now that more people are aware of this proposal. 11 12 13 14 12 13 14 MR. BANGS: Thank you, Cathy. The way I look at this is that there's moose that haven't been harvested and they're standing around and all we're narvested and they're standing around and all we're doing is giving a greater opportunity to subsistence users to go get those moose. I mean if there's 50 percent of Yakutat residents that are taking the moose from the east side, give them a bigger opportunity. Maybe they can reach that goal that they're looking for to barries! 15 16 15 18 19 20 ACTING CHAIR NEEDHAM: Thank you. 20 21 22 Mr. Howard. 21 I'm in favor of it now that I realize that it's just going to help the people of Yakutat. MR. HOWARD: Thank you, Vice Chair. I did the same thing Mr. Douville did. I've got friends I can text and talk about this. So that leads to this 23 24 25 23 24 25 Thank you. question. Has the east side been open before? 26 27 ACTING CHAIR NEEDHAM: Thank you. 26 27 28 29 30 31 MS. SELL: Through the Chair. Member Howard. The east side opens – the whole entire Yakutat Forelands, the east and the west side of the Dangerous open at the same time and it's currently open right now and it closes on November 15th. 28 29 30 31 Mr. Sensmeier, then Mr. Hernandez. MR. SENSMEIER: I don't agree with the MR. SENSMEIER: I don't agree with the over 50 percent. If people are still fishing into the first week of October, I'd just reiterate again that the only access is by airplane. That's the only way. We cannot afford that. I agree with Patty and her suggestion and to monitor it cautiously and go from the still the still respect to the career, like a circuit time. 32 32 33 34 35 36 37 33 34 35 36 37 MR. HOWARD: Okay. So Mr. Sensmeier is correct. The gentleman told me that there's hardly anyone from Yakutat that hunts the east side of that. It's interesting that this proposal — and I applaud you guys for the effort of trying to do this and I understand where you're coming from, but you also have to take into consideration the residents of Yakutat and their concern for their own resources. there. That seems like a fair thing. 38 39 40 41 42 38 39 40 41 ACTING CHAIR NEEDHAM: Thank you. their concern for their own resource. 42 Mr. Hernandez 43 44 43 44 MR. HERNANDEZ: I was just going to say that I think our amendment kind of would sort of help to ensure that maybe more of those moose would go to Yakutat residents. I'm hoping that would satisfy that situation a little bit as opposed to the original 45 46 47 48 ACTING CHAIR NEEDHAM: You have a 45 46 47 48 response to that, Ms. Sell. MS. SELL: Through the Chair. Member 49 Howard. I think you guys have one of your tables in proposal Page 325 Page 327 there that was provided by the Forest Service about the percentage of subsistence users from Yakutat that harvest on the east side of the Dangerous and I believe it's over 50 percent on the east side of the Dangerous ACTING CHAIR NEEDHAM: Is there any ACTING CHAIR NEEDHAM: Is there any other discussion for Council Members on the modified proposal. from Yakutat locals. MR. BANGS: Question. ACTING CHAIR NEEDHAM: The question has been called. ACTING CHAIR NEEDHAM: Thank you, Ms. We'll do a roll call vote, Mr. Kitka. Mr. Douville. 11 MR. DOUVILLE: So I guess you're telling me that you can control the hunt, so the people on the west side do not suffer because of a healthy harvest on the west side. I have it backwards, okay. 12 12 I'm sorry. Before the vote there's a 13 14 15 16 17 18 14 15 16 17 18 MR. DOUVILLE: If we did the proper To me it's north and south. This east and west doesn't iustification. I'm not clear that we did do that ACTING CHAIR NEEDHAM: Thank you. So if that's the case that you can keep those under control and the main users from Yakutat would hunt closer to home would not suffer, then I'm 19 20 21 22 19 20 21 22 23 Mr. Schroeder. okay with it, but there is some concern that may not be MR. SCHROEDER: We've had a long and fruitful discussion on this proposal and I'll attempt to summarize the justification. The question is there a conservation concern and how will the recommenda address this concern. There is no conservation 23 24 25 26 27 24 25 26 27 28 ACTING CHAIR NEEDHAM: Mr. Scott, you had a response concern. The main impetus for this proposal is to utilize a resource that has not been fully utilized in MR. SCOTT: Through the Chair. I just want to make sure I'm clear because I'm getting a little rummy too. Just in the overall harvest on the Yakutat Forelands what I'm hearing is we don't want the harvest on the east side of the Dangerous to impact the 28 the past. With a moose quota of 30 on average about 15 have been taken over the last five or six years. 29 29 30 31 32 30 31 32 The goal of this proposal would be to 33 34 expand the opportunity for subsistence harvesters to harvest these moose primarily by lengthening the season harvest on the west side of the Dangerous. 33 34 MR. DOUVILLE: That's right 35 36 37 38 39 40 35 36 37 38 39 MR. SCOTT: Thank you. Is this recommendation supported by substantial evidence such as biological and traditional ecological knowledge. I think the analysis provided by Staff was pretty thorough. We should also note that Forest Service funded a very large moose study some years ago in the Yakutat area and it's been an area that's been looked at pretty intensively by the Forest Service and the Denortempt of Eich and Greens to scale. ACTING CHAIR NEEDHAM: Ms. Phillips 40 MS. PHILLIPS: Thank you, Chairman Needham. So the original proposal opened like six weeks early and we've now modified it so that it's 41 42 43 44 opening it up 22 days earlier. Of those eight days earlier for – no, two weeks of those 22 days is closed to the taking of moose except by residents of Unit 5A. I like that we've amended it to reduce that timetable Service and the Department of Fish and Game to really have a handle on moose populations. 45 46 45 46 47 48 49 50 We do have — obviously there's some controversy over this proposal in Yakutat. It comes from the Yakutat Advisory Committee, which is made up 47 48 49 50 so that we can monitor it over time and see how that harvest changes and then we can -- I mean if the

                            MR. KITKA: Albert Howard.
MR. HOWARD: Yes.
                            MR. KITKA: Donald Hernandez.
                            MR. HERNANDEZ: Yes.
                            MR. KITKA: Madame Chair. It's
            unanimous, it passed.
                            CHAIRMAN BANGS: Thank you, Cathy. We
            got through it. Tomorrow we're going to start with the
Berners Bay report and proposal. I know there's going
to be some public testimony.
            I just want to tell people that are online we'll be taking that up first thing in the morning. We'll recess until tomorrow at 8:30.
                            (Off record)
                         (PROCEEDINGS TO BE CONTINUED)
